Review for CMSC 452 Final: P and NP

We will **not** define *Turing Machine* until we need to (after midterm).

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Here is all you need to know:

We will **not** define *Turing Machine* until we need to (after midterm).

Here is all you need to know:

1. Everything computable is computable by a Turing machine.

We will **not** define *Turing Machine* until we need to (after midterm).

Here is all you need to know:

- 1. Everything computable is computable by a Turing machine.
- 2. Turing machines compute with discrete steps so one can talk about how many steps a computation takes.

We will **not** define *Turing Machine* until we need to (after midterm).

Here is all you need to know:

- 1. Everything computable is computable by a Turing machine.
- 2. Turing machines compute with discrete steps so one can talk about how many steps a computation takes.
- 3. There are many different models of computation. They are all equivalent to Turing machines. And better- they are all equivalent within poly time.

Def

We rewrite 3SAT, HAM, EUL.

$$3SAT = \{\phi : (\exists \vec{b})[\phi(\vec{b}) = T]\}$$

$$HAM = \{ G : (\exists v_1, \ldots, v_n) [v_1, \ldots, v_n \text{ is a Ham Cycle}] \}.$$

$$EUL = \{G : (\exists v_1, \ldots, v_n) [v_1, \ldots, v_n \text{ is an Eul Cycle}]\}.$$

$$CLIQ = \{ (G, k) : (\exists v_1, \ldots, v_k) [v_1, \ldots, v_k \text{ are a Clique}] \}.$$

For the above sets: If x is a member then there is a short verifiable witness of this.

$$A = \{x : (\exists y)[|y| = p(|x|) \land (x, y) \in B]\}.$$

<□▶ <□▶ < □▶ < □▶ < □▶ < □▶ < □ > ○ < ○

$$A = \{x : (\exists y)[|y| = p(|x|) \land (x, y) \in B]\}.$$

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Intuition. Let $A \in NP$.

$$A = \{x : (\exists y)[|y| = p(|x|) \land (x, y) \in B]\}.$$

Intuition. Let $A \in NP$.

If x ∈ A then there is a SHORT (poly in |x|) proof of this fact, namely y, such that x can be VERIFIED in poly time.

*ロ * * @ * * ミ * ミ * ・ ミ * の < や

$$A = \{x : (\exists y)[|y| = p(|x|) \land (x, y) \in B]\}.$$

Intuition. Let $A \in NP$.

- If x ∈ A then there is a SHORT (poly in |x|) proof of this fact, namely y, such that x can be VERIFIED in poly time.
- So if I wanted to convince you that x ∈ A, I could give you y. You can verify (x, y) ∈ B easily and be convinced.

$$A = \{x : (\exists y)[|y| = p(|x|) \land (x, y) \in B]\}.$$

Intuition. Let $A \in NP$.

- If x ∈ A then there is a SHORT (poly in |x|) proof of this fact, namely y, such that x can be VERIFIED in poly time.
- So if I wanted to convince you that x ∈ A, I could give you y. You can verify (x, y) ∈ B easily and be convinced.

▶ If $x \notin A$ then there is NO proof that $x \in A$.

Note 3SAT, HAM, EUL, CLIQ are all in NP.

Def Let X, Y be sets. $X \leq Y$ means there is a poly-time function f:

 $x \in X$ iff $f(x) \in Y$.
