Sorting exercise

- Distributed PublicTests.java to your cvs repositories
- do Team -> Update to get it, or restart Eclipse
- You will need to add JUnit3 to your build path
Sorting speed competition

- Performance measured on 10,000 random values
- More for multithreaded sort
- If too many solutions within 5% of the best, may only look at faster 5-10 solutions
Multithreaded sort

- No big benefit to using more threads than you have processors

  ```java
  Runtime runtime = Runtime.getRuntime();
  int nrOfProcessors = runtime.availableProcessors();
  ```
