

Threading

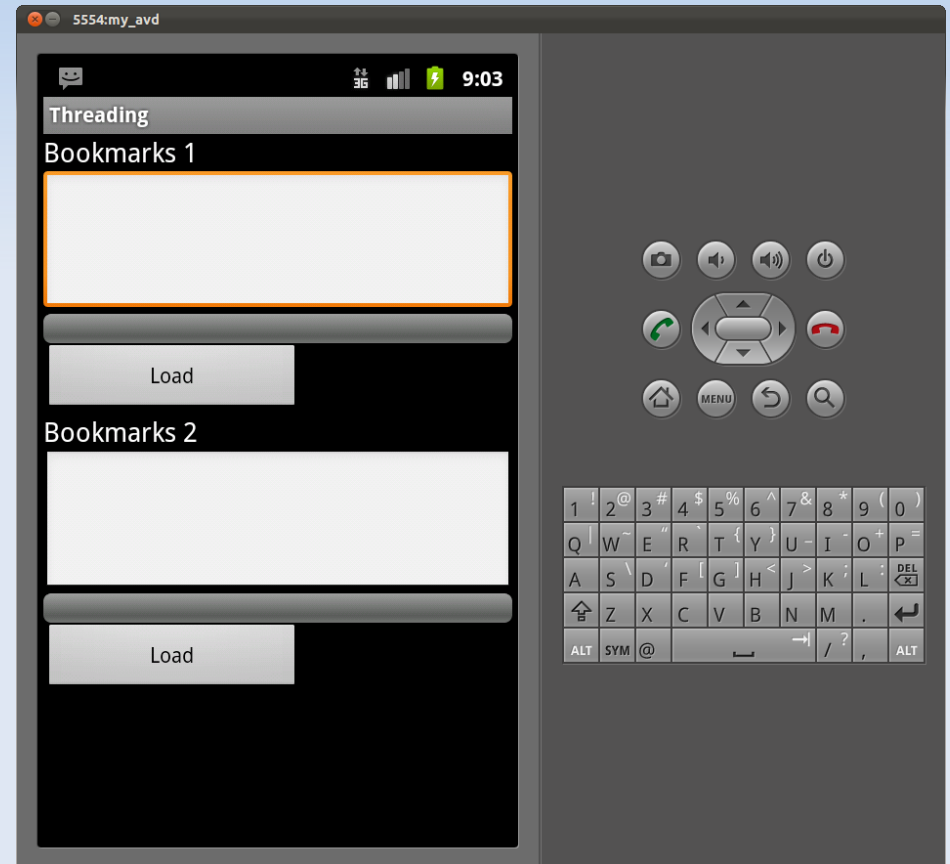

CMSC 436 Lab 10
Derek Juba

Threading

- In this lab you will revisit loading Bookmarks with a Content Provider.
- This time, however, the Bookmarks will be loaded in a different thread so that other tasks can be performed while they are loading.
- The threading should be done using the AsyncTask class.

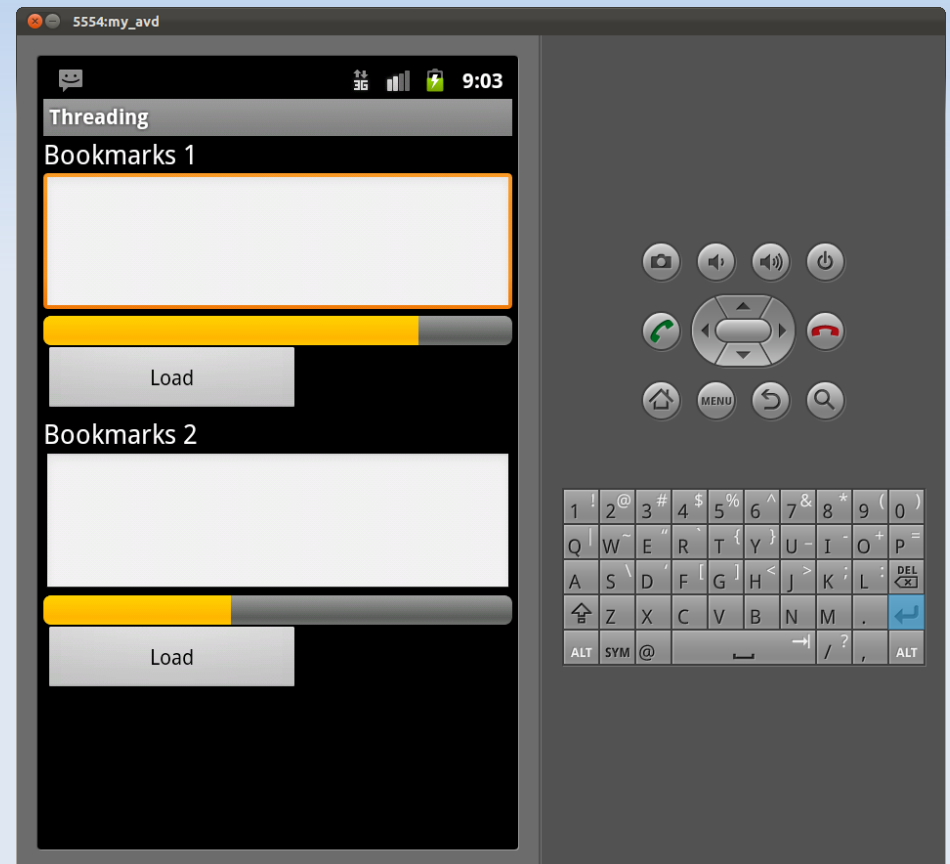

Threading

- The activity user interface should allow for two different sets of Bookmarks to be loaded simultaneously in different threads.

Threading

- A progress bar should advance while the Bookmarks load.
- Since the Bookmarks load very quickly, you should simulate a long loading operation by using a loop with a sleep statement.

Threading

- Once the Bookmarks are loaded they should be displayed in the TextViews.
