

Data Storage

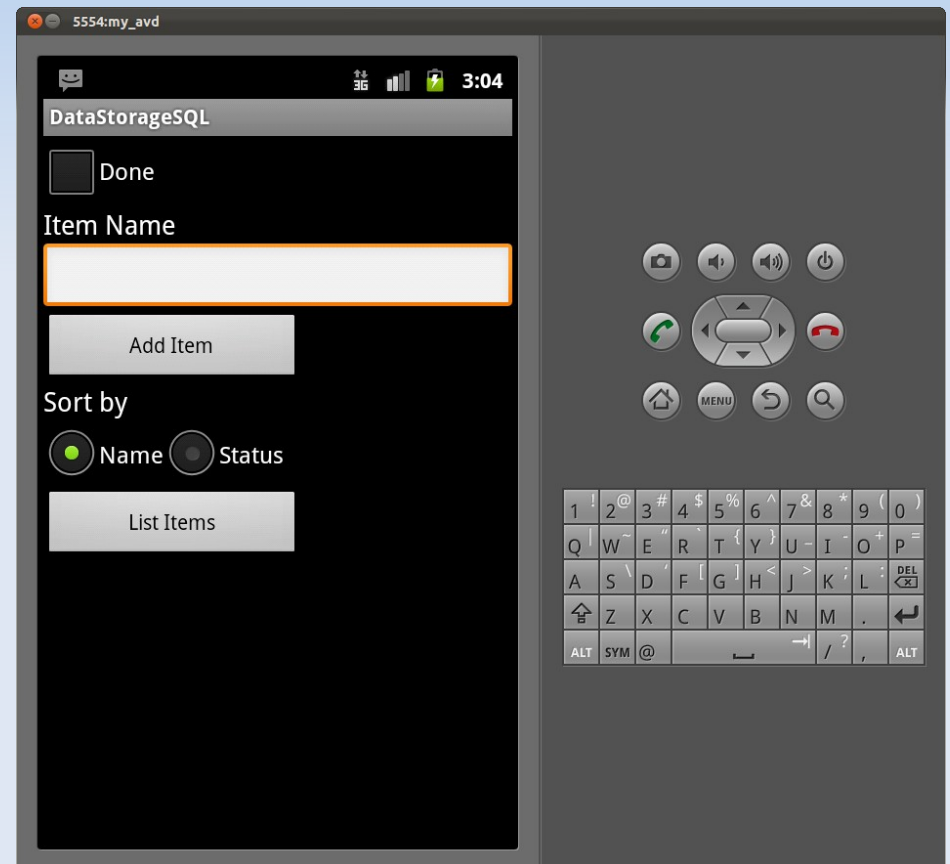

CMSC 436 Lab 9
Derek Juba

Data Storage

- In this lab you will make a ToDo manager app that stores the ToDo items in an SQLite database.

Data Storage

- The user can set a name for the item and select whether the item is done.
- Clicking Add Item stores the item in the database.

Data Storage

- Clicking List Items displays the ToDo items in the database.
- The items are sorted either by Name or Done status.
- The sort must be done by the database query, not by Java sort.
