CMSC 330: Organization of Programming Languages

More Ruby:
Methods, Classes, Arrays, Hashes
In Ruby, everything is an Object

- Ruby is object-oriented
- All values are (references to) objects
  - Java/C/C++ distinguish *primitives* from *objects*
- Objects communicate via *method calls*
- Each object has its own (private) *state*
- Every object is an instance of a *class*
  - An object’s class determines its behavior:
  - The class contains *method* and *field* definitions
    - Both *instance* fields and per-class (“static”) fields
Everything is an Object

Examples

- \((-4).\text{abs}\) No-argument instance method of Fixnum
  - integers are instances of class Fixnum
- \(3 + 4\)
  - infix notation for “invoke the + method of 3 on argument 4”
- "programming".length
  - strings are instances of String
- String.new
  - classes are objects with a new method
- 4.13.class
  - use the class method to get the class for an object
  - floating point numbers are instances of Float
Ruby Classes

- Class names begin with an uppercase letter
- The `new` method creates an object
  - `s = String.new` creates a new `String` and makes `s` refer to it
- Every class inherits from `Object`
Objects and Classes

- Objects are data
- Classes are types (the kind of data which things are)
- Classes are also objects

<table>
<thead>
<tr>
<th>Object</th>
<th>Class (aka type)</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>Integer</td>
</tr>
<tr>
<td>-3.30</td>
<td>Float</td>
</tr>
<tr>
<td>&quot;CMSC 330&quot;</td>
<td>String</td>
</tr>
<tr>
<td>String.new</td>
<td>String</td>
</tr>
<tr>
<td>['a', 'b', 'c']</td>
<td></td>
</tr>
<tr>
<td>Integer</td>
<td>Class</td>
</tr>
</tbody>
</table>

- Integer, Float, and String are objects of type Class
  - So is Class itself!
Two Cool Things to Do with Classes

- Since classes are objects, you can manipulate them however you like
  - Here, the type of y depends on p
    - Either a String or a Time object

- You can get names of all the methods of a class
  - Object.methods
    => ["send", "name", "class_eval", "object_id", "new", "autoload?", "singleton_methods", ... ]

```ruby
if p then
  x = String
else
  x = Time
End
y = x.new
```
Creating Strings in Ruby (cont.)

- Ruby has `printf` and `sprintf`
  - `printf("Hello, %s\n", name);`
  - `sprintf("%d: %s", count, Time.now)`
    - Returns a String
- `to_s` returns a `String` representation of an object
  - Can be invoked implicitly – write `puts(p)` instead of `puts(p.to_s)`
    - Like Java’s `toString()`
- `inspect` converts any object to a string
  ```ruby
  irb(main):033:0> p.inspect
  => "#<Point:0x54574 @y=4, @x=7>"
  ```
Symbols

- Ruby *symbols* begin with a colon
  - :foo, :baz_42, :"Any string at all"

- Symbols are “interned” *Strings*
  - The same symbol is at the same physical address
  - Can be compared with physical equality

```
"foo" == "foo"     # true
"foo".equal? "foo" # false
:foo == :foo       # true
:foo.equal :foo    # true
```

- Are symbols worth it? Probably not…
The nil Object

- Ruby uses nil (not null)
  - All uninitialized fields set to nil (@ prefix used for fields)
    ```ruby
    irb(main):004:0> @x
    => nil
    ```
- nil is an object of class NilClass
  - Unlike null in Java, which is a non-object
  - nil is a singleton object – there is only one instance of it
    - NilClass does not have a new method
  - nil has methods like to_s, but not other methods
    ```ruby
    irb(main):006:0> nil + 2
    NoMethodError: undefined method `+' for nil:NilClass
    ```
Quiz 1

What is the type of variable x at the end of the following program?

```
p = nil
x = 3
if p then
    x = "hello"
else
    x = nil
end
```

A. Integer
B. NilClass
C. String
D. Nothing – there’s a type error
Quiz 1

What is the type of variable \( x \) at the end of the following program?

```lisp
p = nil
x = 3
if p then
    x = "hello"
else
    x = nil
end
```

A. Integer
B. NilClass
C. String
D. Nothing – there’s a type error
Arrays and Hashes

- Ruby data structures are typically constructed from Arrays and Hashes
  - Built-in syntax for both
  - Each has a rich set of standard library methods
  - They are integrated/used by methods of other classes
Arrays of objects are instances of class `Array`
  - Arrays may be heterogeneous
    
    ```ruby
    a = [1, "foo", 2.14]
    ```
  - C-like syntax for accessing elements
    - indexed from 0
    - return `nil` if no element at given index
      
      ```ruby
      irb(main):001:0> b = []; b[0] = 0; b[0]
      => 0
      irb(main):002:0> b[1]  # no element at this index
      => nil
      ```
Arrays Grow and Shrink

- Arrays are growable
  - Increase in size automatically as you access elements
    ```ruby
    irb(main):001:0> b = []; b[0] = 0; b[5] = 0; b
    => [0, nil, nil, nil, nil, 0]
    - `[]` is the empty array, same as `Array.new`

- Arrays can also shrink
  - Contents shift left when you delete elements
    ```ruby
    a = [1, 2, 3, 4, 5]
    a.delete_at(3) # delete at position 3; a = [1,2,3,5]
    a.delete(2)   # delete element = 2; a = [1,3,5]
    ```
Iterating Through Arrays

- It's easy to iterate over an array with `while`
  - `length` method returns array’s current length

```ruby
a = [1, 2, 3, 4, 5]
i = 0
while i < a.length
  puts a[i]
i = i + 1
end
```

- Looping through elements of an array is common
  - We’ll see a better way soon, using code blocks
Arrays as Stacks and Queues

- Arrays can model stacks and queues
  
  ```
  a = [1, 2, 3]
  a.push("a")  # a = [1, 2, 3, "a"]
  x = a.pop     # x = "a"
  a.unshift("b") # a = ["b", 1, 2, 3]
  y = a.shift   # y = "b"
  ```

  Note that `push`, `pop`, `shift`, and `unshift` all permanently modify the array.
Hash

- **A hash acts like an associative array**
  - Elements can be indexed by any kind of value
  - Every Ruby object can be used as a hash key, because the Object class has a hash method

- Elements are referred to like array elements

```ruby
italy = Hash.new
italy["population"] = 58103033
italy["continent"] = "europe"
italy[1861] = "independence"

pop = italy["population"]  # pop is 58103033
planet = italy["planet"]   # planet is nil
```
Hash methods

- `new(o)` returns hash whose default value is `o`
  - `h = Hash.new("fish"); h["go"]`  # returns "fish"
- `values` returns array of a hash’s values
- `keys` returns an array of a hash’s keys
- `delete(k)` deletes mapping with key `k`
- `has_key?(k)` is true if mapping with key `k` present
  - `has_value?(v)` is similar
Hash creation

Convenient syntax for creating literal hashes

• Use `{ key => value, ... }` to create hash table

```plaintext
credits = {
    "cmsc131" => 4,
    "cmsc330" => 3,
}

x = credits["cmsc330"]  # x now 3
credits["cmsc311"] = 3
```

• Use `{ }` for the empty hash
Quiz 2: What is the output?

```python
a = {"foo" => "bar"}
a[0] = "baz"
print a[1]
print a["foo"]
```

A. Error
B. bar
C. bazbar
D. baznilbar
Quiz 2: What is the output?

```
a = {“foo” => “bar”}
a[0] = “baz”
print a[1]
print a[“foo”]
```

A. Error
B. bar
C. bazbar
D. baznilbar
Quiz 3: What is the output?

```python
a = { "Yellow" => [] }
a["Yellow"] = {}
a["Yellow"]["Red"] = ["Green", "Blue"]
print a["Yellow"]["Red"][1]
```

A. Green
B. (nothing)
C. Blue
D. Error
**Quiz 3: What is the output?**

```python
a = { "Yellow" => [] }
a["Yellow"] = {}  
a["Yellow"]["Red"] = ["Green", "Blue"]
print a["Yellow"]["Red"][1]
```

A. **Green**
B. **(nothing)**
C. **Blue**
D. **Error**
Quiz 4: What is the output?

```
a = [1,2,3]
a[1] = 0
a.shift
print a[1]
```

A. *Error*

B. 2

C. 3

D. 0
Quiz 4: What is the output?

```python
a = [1,2,3]
a[1] = 0
a.shift
print a[1]
```

A. Error
B. 2
C. 3
D. 0
Defining Your Own Classes

class Point
  def initialize(x, y)
    @x = x
    @y = y
  end
  
  def add_x(x)
    @x += x
  end
  
  def to_s
    return "(" + @x.to_s + "," + @y.to_s + ")"
  end
end

p = Point.new(3, 4)
p.add_x(4)
puts(p.to_s)
Methods in Ruby

Methods are declared with `def...end`

```ruby
def sayN(message, n)
  i = 0
  while i < n
    puts message
    i = i + 1
  end
  return i
end
```

```ruby
x = sayN("hello", 3)
puts(x)
```

List parameters at definition

May omit parens on call

Invoke method

Like print, but adds newline

Note: Methods need not be part of a class

Methods should begin with lowercase letter and be defined before they are called

Variable names that begin with an uppercase letter are **constants** (only assigned once)
Methods: Terminology

- **Formal parameters**
  - Variable parameters used in the method
  - `def sayN(message, n)` in our example

- **Actual arguments**
  - Values passed in to the method at a call
  - `x = sayN("hello", 3)` in our example

- **Top-level methods are “global”**
  - Not part of a class. `sayN` is a top-level method.
Method Return Values

- Value of the `return` is the value of the last executed statement in the method
  - These are the same:

  ```ruby
  def add_three(x)
    return x+3
  end
  `````

- Methods can return multiple results (as an Array)

  ```ruby
  def dup(x)
    return x,x
  end
  ```
Method naming style

- Names of methods that return `true` or `false` should end in `?`
- Names of methods that modify an object’s state should end in `!`

Example: suppose `x = [3,1,2]` (this is an array)
- `x.member? 3` returns true since 3 is in the array `x`
- `x.sort` returns a `new` array that is sorted
- `x.sort!` modifies `x` in place
An object’s instance variables (with @) can be directly accessed only by instance methods. Outside class, they require accessors:

A typical getter
```ruby
def x
  @x
end
```

A typical setter
```ruby
def x= (value)
  @x = value
end
```

Very common, so Ruby provides a shortcut:
```ruby
class ClassWithXandY
  attr_accessor :x, :y
end
```

Says to generate the x= and x and y= and y methods.
No Method Overloading in Ruby

- Thus there can only be one `initialize` method
  - A typical Java class might have two or more constructors

- No overloading of methods in general
  - You can code up your own overloading by using a variable number of arguments, and checking at runtime the number/types of arguments

- Ruby does issue an exception or warning if a class defines more than one `initialize` method
  - But last `initialize` method defined is the valid one
Quiz 5: What is the output?

class Dog
  def smell(thing)
    "I smelled #{thing}"
  end
  def smell(thing,dur)
    "#{smell(thing)} for #{dur} seconds"
  end
end

fido = Dog.new
puts fido.smell("Alice",3)

A. I smelled Alice for nil seconds
B. I smelled #{thing}
C. I smelled Alice
D. Error
Quiz 5: What is the output?

```ruby
class Dog
  def smell(thing)
    "I smelled #{thing}"
  end
  def smell(thing,dur)
    "#{smell(thing)} for #{dur} seconds"
  end
end
fido = Dog.new
puts fido.smell("Alice",3)
```

A. I smelled Alice for nil seconds  
B. I smelled #{thing}  
C. I smelled Alice  
D. Error – call from Dog expected two args
Quiz 6: What is the output?

```ruby
class Dog
  def smell(thing)
    "I smelled #{thing}"
  end
  def smelltime(thing,dur)
    "#{smell(thing)} for #{dur} seconds"
  end
end
fido = Dog.new
puts fido.smelltime("Alice",3)
```

A. I smelled Alice for 3 seconds  
B. I smelled #{thing} for #{dur} seconds  
C. I smelled Alice for 3 seconds  
D. Error
Quiz 6: What is the output?

class Dog
    def smell(thing)
        "I smelled #{thing}"
    end
    def smelltime(thing,dur)
        "#{smell(thing)} for #{dur} seconds"
    end
end
fido = Dog.new
puts fido.smelltime("Alice",3)

A. I smelled Alice for seconds
B. I smelled #{thing} for #{dur} seconds
C. I smelled Alice for 3 seconds
D. Error
Inheritance

- Recall that every class inherits from Object

```ruby
class A
  #< Object
  def add(x)
    return x + 1
  end
end

class B < A
  def add(y)
    return (super(y) + 1)
  end
end

b = B.new
puts(b.add(3))

b.is_a? A
true
b.instance_of? A
false
```
Quiz 7: What is the output?

```ruby
class Gunslinger
  def initialize(name)
    @name = name
  end
  def full_name
    "#{@name}"
  end
end

class Outlaw < Gunslinger
  def full_name
    "Dirty, no good #{super}"
  end
end
d = Outlaw.new("Billy the Kid")
puts d.full_name
```

A. Dirty, no good Billy the kid
B. Dirty, no good
C. Billy the Kid
D. Error
```ruby
class Gunslinger
  def initialize(name)
    @name = name
  end
  def full_name
    "#{@name}"
  end
end

class Outlaw < Gunslinger
  def full_name
    "Dirty, no good #{super}"
  end
end

d = Outlaw.new("Billy the Kid")
puts d.full_name
```

Quiz 7: What is the output?

A. Dirty, no good Billy the Kid
B. Dirty, no good
C. Billy the Kid
D. Error
Global Variables in Ruby

- Ruby has two kinds of global variables
  - Class variables beginning with `@@` (static in Java)
  - Global variables across classes beginning with `$`

```ruby
class Global
  @@x = 0

  def Global.inc
    @@x = @@x + 1; $x = $x + 1
  end

  def Global.get
    return @@x
  end
end

$x = 0
Global.inc
$x = $x + 1
Global.inc
puts(Global.get)
puts($x)
```

define a class ("singleton") method
Quiz 8: What is the output?

class Rectangle
  def initialize(h, w)
    @@h = h
    @w = w
  end
  def measure()
    return @@h + @w
  end
End

r = Rectangle.new(1,2)
s = Rectangle.new(3,4)
puts r.measure()

A. 0
B. 5
C. 3
D. 7
Quiz 8: What is the output?

```ruby
class Rectangle
  def initialize(h, w)
    @@h = h
    @w = w
  end
  def measure()
    return @@h + @w
  end
end
r = Rectangle.new(1,2)
s = Rectangle.new(3,4)
puts r.measure()
```

A. 0  
B. 5  
C. 3  
D. 7  

CMSC 330 - Fall 2020
What is a Program?

In C/C++, a program is...
• A collection of declarations and definitions
• With a distinguished function definition
  ➢ int main(int argc, char *argv[]) { ... }
• When you run a C/C++ program, it’s like the OS calls main(...)

In Java, a program is...
• A collection of class definitions
• With some class (say, MyClass) containing a method
  ➢ public static void main(String[] args)
• When you run java MyClass, the main method of class MyClass is invoked
A Ruby Program is...

- The class `Object`
  - When the class is loaded, any expressions not in method bodies are executed

```ruby
def sayN(message, n)
  i = 0
  while i < n
    puts message
    i = i + 1
  end
  return i
end

x = sayN("hello", 3)
puts(x)
```

- Defines a method of `Object` (i.e., top-level methods belong to `Object`)
- Invokes `self.sayN`
- Invokes `self.puts` (part of `Object`)

CMSC 330 - Fall 2020
