
Announcements

- ❖ Make sure your grades in grades.cs.umd.edu are correct.
-

Miscellaneous

- ❑ Link colors Example
 - colors.html
- ❑ Server directives
 - serverExample.html – If you uploaded locally no significant output is generated. However if it is processed by web server you get significant information (<http://www.cs.umd.edu/~nelson/cmssc102/serverExample.shtml>)

HTML Frames

- Frames – divide a web page into multiple scrollable areas
- Frame document - `<body>` tag is replaced with `<frameset>`
- `<frameset>`
 - Describes the sub-html elements
 - Describes a set of rows and columns
- `<frame>`
 - Defines a frame in a frameset
 - Defines
- **FramesEx1.html**
 - Notice the effect of changing the percentages
- **FrameEx2.html**
- **FrameEx3.html**
 - Notice that now we can “redirect” output to a specific frame
- `<frameset>` tags can be nested
- **`<noframes>`**
 - Tag that allows to specify an alternative for browsers that cannot process frames

Frames

- Add the `<noframes>` tag for browsers not supporting frames
- You cannot use both `<frameset>` and `<body>` in a document
- FramesEx4.html
- Frames' Disadvantages
 - ❑ We need to keep track of several html documents
 - ❑ Difficult to print
