Creating Test Programs

• In order to fully test your project, you are encouraged to write test programs

• Test programs should be placed in geekos-project/src/user/

• Will be compiled when project is compiled and can be run the same as test programs
  • At geekos prompt, if your test program is geekos-project/src/user/test.c:
    
    $: test
  
• geekOS system calls will be capitalized (Pipe(), Read(), Write(), etc.) as in pipe-p1.c and pipe-p2.c

• Reminder: use Print() not printf()

• Read through project0 handout to determine edge cases that should be handled
