CMSC 132: Object-Oriented Programming II

Final Exam & Summary

Department of Computer Science
University of Maryland, College Park
Final Exam Location

Time
- Friday
- Aug 10th
- 9-11pm (Starting at 9)

Place
- Usual Classroom
Final Exam Topics

- 50% topics from midterm 1 & 2
  - Algorithms, data structures, complexity
  - Software engineering, OO design

- 50% new topics
  - Multithreading & synchronization in Java
  - Networking & networking support in Java
  - Sorting algorithms
  - Algorithm strategies
  - Design patterns
  - Effective Java
Question Formats

- True/ false
- Fill-in-the-blank
  - Short answers expected
- Multiple choice
- Analyze complexity
- Apply algorithms
- Design OO solution in UML
- Write code
CMSC 132 Summary

We covered
- Object-oriented software development
- Algorithms & data structures

Provided brief glimpse of CS applications
- Human computer interfaces (GUIs)
- Machine learning (Markov models)
- High performance computing (Multithreading)
- Networking, compression, databases

Hope you improved
- Programming skills (coding, testing, debugging)
What Comes Next?

- CMSC 212 – Low level programming
  - Treating references as memory addresses (in C)
- CMSC 250 – Discrete structures
  - Simple discrete math & proofs
- CMSC 311 – Computer Organization
  - How computers work
- CMSC 330 – Programming Languages
  - Different programming languages & paradigms
- CMSC 351 – Algorithms
  - Analyze & prove complexity of algorithms
What Comes Next?

- **Building computer systems**
  - 411 architecture, 412 operating system, 414 security, 417 networking, 430 compilers

- **Building software**
  - 433 programming technologies, 434 human-computer interfaces, 435 software engineering

- **Theory of computing**
  - 420 data structures, 451 advanced algorithms, 452 computation theory, 456 cryptology

- **Applications**
  - 421 artificial intelligence, 423 bioinformatics, 424 databases, 426 image processing, 427 graphics
Computer Science

- Very interesting
  - Once you get beyond basic programming
  - Improvements in software tools make it increasingly easy to provide a lot of functionality with little code

- Useful in many fields
  - Engineering, physical sciences, biological sciences
  - Information management for businesses ($$)

- In high demand
  - Always in top 10 in # of open job positions
  - $52K average starting salary for 2007 grads
  - Skilled software professionals always in demand
Finally…

Good luck on Exam
