

CMSC 351: Algorithms

Summer 2006

Instructor: Clyde Kruskal. Office: AVW 3215. Office phone: 301-405-2683.

E-mail: kruskal@cs.umd.edu.

Office hours: Monday, Thursday 9:30am-11:00am

Also by appointment.

Teaching Assistant: Mohammadreza Ghodsi.

Email: ghodsi@cs.umd.edu

Office hours: AVW 1112.

Tuesday, Thursday 12:30pm-2:00pm/2:30pm

Also by appointment.

Class Time: Monday through Friday: 11:00-12:20, CSI 1122

Course Overview: This course presents an introduction to the techniques for designing efficient computer algorithms and analyzing their running times. General topics include asymptotics, solving summations and recurrences, algorithm design techniques, analysis of data structures, and introduction to NP-completeness.

Text: Thomas Cormen, Charles Leiserson, Ron Rivest, and Clifford Stein, *Introduction to Algorithms*, McGraw Hill and MIT Press, Second Edition, 2001.

Prerequisites: Each student is expected to know the basic concepts of programming (e.g. loops, pointers, recursion), discrete mathematics (proof by induction, sets), simple data structures (lists, stacks, queues, trees), and calculus (logarithms, differentiation, integration).

Course Work: Course work will consist of written homework assignments, and two exams (a midterm and a final). You may discuss homework problems and general solution strategies with classmates, but you must write up the solutions yourself.

As a courtesy to the grader, homeworks are to be written clearly and neatly. Poorly written work will not be graded. When writing algorithms be sure not only that your solution is correct, but also that it is easy for the grader to understand why your solution is correct. Part of your grade will be based not only on correctness, but also on the simplicity, clarity, and elegance of your solutions.

Grading: Final grades will be based on the written assignments, a midterm exam, and a final exam. The relative weights of these will be approximately 10% for the homework total, 40% for of the midterm (Tuesday, July 3), and 50% for the final exam (Friday, July 13).

Syllabus: The following is a *tentative* list of topics and readings in *approximate* order.

1. Introduction, Ch. 1,2
2. Growth of Functions, Ch. 3
3. Summations, Appendix A
4. Recurrences, Ch. 4
5. Probability, Appendix C
6. Heapsort, Ch. 6
7. Quicksort, Ch. 7
8. Sorting in Linear Time, Ch. 8
9. Medians and Order Statistics, Ch. 9
10. Graphs and Trees, Appendix B
11. Brief introduction to NP-completeness, Ch. 34
