

Exam #10 - CMSC132 (Summer 2022)

Time: The exam will be posted on Friday Aug, 5 at 1 PM (afternoon), and due the same day, Friday Aug., 5 at 1:50 PM (afternoon).

Content: This is a **written exam**, not coding on Eclipse. You will be given a pdf with short answer questions on it. You will open up your favorite word processor and type out the answers to the questions. You will turn it into a pdf and submit the pdf on the submit server via upload (not click submit project). By short answers, I mean true/false, fill in the blank, write out the answer, answer question about code segment, etc. You can use notes, videos, slides, and examples, but please, no searching the web. You should study as you will have only **50 minutes**, so if you are trying to look everything up and/or learn the concept during the exam, you will run out of time to type out your answers. For exam 10, you are responsible for **everything**, yes everything (including lab), that was covered in **Week 6 to Week 10** (including Week 10).

Example of what you will get:

Exam.pdf

1. What language did we code in?
2. What IDE did we use this term?

Example of what you will type out and upload to the submit server as a pdf:

yourLastName.pdf

1. Java
2. Eclipse

Details:

- The exam is designed to be completed in less than 50 min (class time). Do not wait till 1:50 to turn it in. Submit by 1:45!
- There will be a 10-minute late period. You can turn it in up to 2:00 with a -10 penalty. Use as an absolute last resort. Anything after 2:00 is recorded as a zero.
- You can only post clarification questions in Piazza on exam day and a CMSC 132 staff member will reply. You should post as a private post and we will make it public or update the FAQ if others can benefit from the answer. As a student, do not answer any piazza post on exam day.
- Posting of any answers in Piazza (or any other public platform), during the exam period, represents an academic integrity violation and will be reported as such.
- You must work by yourself. Sharing of exam solutions represents an academic integrity violation and will be reported as such. Submissions can be checked with cheating detection software.

- You can use class resources (lecture notes, lecture/lab examples, videos, etc.), but no other resources (e.g., information from the web).
- All submissions must be done via the submit server (no e-mail). The **last submission** on the submit server will be downloaded for manual TA grading purposes (you can submit as many times as you want before the deadline). **Note, if you have both an on-time and a late, we will only grade the late and do a -10.**
- **You must turn in a pdf.** Not a word document, a handwritten document that you took a picture of, etc. We reserve the right to deduct points for not following this direction. Please figure out how to make a pdf **BEFORE** the exam.
