CMSC 735 & MSWE 609

Assignment 4B

In the second part of this assignment, you will now apply the error abstraction process that was taught in class. Use the handout to remind yourself of the process (download a copy from the ftp site if you have lost your original), and apply it to the fault list you created for the PG requirements in Assignment 4A. Create a list of the errors that you think are in the document. Then, return to the PG document and search for additional faults that could have been caused by each of the errors you identified.

You must mail your error list and revised fault list to Ryan (rjones@cs.umd.edu) by **Tuesday, Nov. 4 at noon**. You should download the template report form 2.2 from the class ftp site and fill in your faults as described (if you have any problems, let Ryan know and he will send an ASCII version of the file via email). Keep track of how long you spend on error abstraction and, separately, on re-examining the document for faults; you will need this information to answer some of the questions at the bottom of the report form (these questions are for statistical purposes only and will not be used in determining your grade).

Be sure to keep a copy of the completed form 2.2 file for yourself! You will need to reuse some of this information on the next phase of this assignment.
