CMSC 735 & MSWE 609

Assignment 4C

This is the final part of the assignment on fault detection.

In this step, you will again meet as a team to discuss the error and fault lists. You must submit:

- A final list of the errors in the document
- A final fault list, so that you can show the mapping from errors to faults. (You may add new faults to your list if you desire in this phase, but it is not mandatory.)

As your submissions in this phase must represent the work of all group members, the team should merge the individual lists into a final list. The team must reach a consensus on what errors to include in the team list, and the faults to which they map. As in assignment 2C, since the final lists reflect the work of the entire group, the group should discuss what will and will not be included so as to eliminate redundancies, inconsistencies, and mistakes.

Please note that the team meeting will not be effective unless the individual participants have already found their own faults and abstracted their own error lists. **The team should not meet until after the team members have already submitted their individual lists to the TA.**

You must mail your team error and fault lists to Ryan (rjones@cs.umd.edu) by **Nov. 11 at noon**. You should download the template report form 2.3 from the class ftp site and fill in your faults and errors as described (if you have any problems downloading, let Ryan know and he will send an ASCII version of the file via email). Keep track of how long you spend discussing the lists; you will need this information to answer some of the questions at the bottom of the report form (these questions are for statistical purposes only and will not be used in determining your grade).
