

## CMSC 330, Fall 2013, Practice Problem 4 Solutions

1. Context Free Grammars
  - a. List the 4 components of a context free grammar.  
**Terminals, non-terminals, productions, start symbol**
  - b. Describe the relationship between terminals, non-terminals, and productions.  
**Productions are rules for replacing a single non-terminal with a string of terminals and non-terminals**
  - c. Define ambiguity.  
**Multiple left-most (or right-most) derivations for the same string**
  - d. Describe the difference between scanning & parsing.  
**Scanning matches input to regular expressions to produce terminals, parsing matches terminals to grammars to create parse trees**
  - e. Describe an abstract syntax tree (AST)  
**Compact representations of parse trees with only essential parts**
  
2. Describing Grammars
  - a. Describe the language accepted by the following grammar:  
 $S \rightarrow abS \mid a$   
 **$(ab)^*a$**
  - b. Describe the language accepted by the following grammar:  
 $S \rightarrow aSb \mid \epsilon$   
 **$a^n b^n, n \geq 0$**
  - c. Describe the language accepted by the following grammar:  
 $S \rightarrow bSb \mid A \quad A \rightarrow aA \mid \epsilon$   
 **$b^n a^* b^n, n \geq 0$**
  - d. Describe the language accepted by the following grammar:  
 $S \rightarrow AS \mid B \quad A \rightarrow aAc \mid Aa \mid \epsilon \quad B \rightarrow bBb \mid \epsilon$   
**Strings of a & c with same or fewer c's than a's and no prefix has more c's than a's, followed by an even number of b's**
  - e. Describe the language accepted by the following grammar:  
 $S \rightarrow S \text{ and } S \mid S \text{ or } S \mid (S) \mid \text{true} \mid \text{false}$   
**Boolean expressions of true & false separated by and & or, with some expressions enclosed in parentheses**
  - f. Which of the previous grammars are left recursive?  
**2d, 2e**
  - g. Which of the previous grammars are right recursive?  
**2a, 2c, 2d, 2e**
  - h. Which of the previous grammars are ambiguous? Provide proof.  
**Examples of multiple left-most derivations for the same string**  
**2d:**  $S \Rightarrow AS \Rightarrow AaS \Rightarrow aS \Rightarrow aB \Rightarrow a$   
 $S \Rightarrow AS \Rightarrow S \Rightarrow AS \Rightarrow AaS \Rightarrow aS \Rightarrow aB \Rightarrow a$   
**2e:**  $S \Rightarrow S \text{ and } S \Rightarrow S \text{ and } S \text{ and } S \Rightarrow \text{true and } S \text{ and } S$   
 $\Rightarrow \text{true and true and } S \Rightarrow \text{true and true and true}$   
 $S \Rightarrow S \text{ and } S \Rightarrow \text{true and } S \Rightarrow \text{true and } S \text{ and } S$   
 $\Rightarrow \text{true and true and } S \Rightarrow \text{true and true and true}$

### 3. Creating Grammars

- Write a grammar for  $a^x b^y$ , where  $x = y$   
 $S \rightarrow aSb \mid \epsilon$
- Write a grammar for  $a^x b^y$ , where  $x > y$   
 $S \rightarrow aL \quad L \rightarrow aL \mid aLb \mid \epsilon$
- Write a grammar for  $a^x b^y$ , where  $x = 2y$   
 $S \rightarrow aaSb \mid \epsilon$
- Write a grammar for  $a^x b^y a^z$ , where  $z = x+y$   
 $S \rightarrow aSa \mid L \quad L \rightarrow bLa \mid \epsilon$
- Write a grammar for  $a^x b^y a^z$ , where  $z = x-y$   
 $S \rightarrow aSa \mid L \quad L \rightarrow aLb \mid \epsilon$
- Write a grammar for all strings of  $a$  and  $b$  that are palindromes.  
 $S \rightarrow aSa \mid bSb \mid L \quad L \rightarrow a \mid b \mid \epsilon$
- Write a grammar for all strings of  $a$  and  $b$  that include the substring  $baa$ .  
 $S \rightarrow LbaaL \quad L \rightarrow aL \mid bL \mid \epsilon \quad // L = \text{any}$
- Write a grammar for all strings of  $a$  and  $b$  with an odd number of  $a$ 's and an odd number of  $b$ 's.  
 $S \rightarrow EaEbE \mid EbEaE \quad E \rightarrow EaEaE \mid EbEbE \mid \epsilon \mid SS \quad // E = \text{even \#s}$
- Write a grammar for the “if” statement in OCaml  
 $S \rightarrow \text{if } E \text{ then } E \text{ else } E \mid \text{if } E \text{ then } E \quad E \rightarrow S \mid \text{expr}$
- Write a grammar for all lists in OCaml  
 $S \rightarrow [] \mid [E] \mid E::S \quad E \rightarrow \text{elem} \mid S \quad // \text{Ignores types, allows lists of lists}$
- Which of your grammars are ambiguous? Can you come up with an unambiguous grammar that accepts the same language?

**Grammar for 3h is ambiguous. An unambiguous grammar must exist since the language can be recognized by a deterministic finite automaton, and DFA  $\rightarrow$  RE  $\rightarrow$  Regular Grammar.**

**Grammar for 3i is ambiguous. Multiple derivations for “if expr then if expr then expr else expr”. It is possible to write an unambiguous grammar by restricting some S so that no unbalanced if statement can be produced.**

### 4. Derivations, Parse Trees, Precedence and Associativity

For the following grammar:  $S \rightarrow S \text{ and } S \mid \text{true}$

- List 4 derivations for the string “true and true and true”.
  - $S \Rightarrow \underline{S} \text{ and } S \Rightarrow \underline{S} \text{ and } S \text{ and } S \Rightarrow \text{true and } \underline{S} \text{ and } S \Rightarrow \text{true and true and } S \Rightarrow \text{true and true and true}$
  - $S \Rightarrow \underline{S} \text{ and } S \Rightarrow \text{true and } S \Rightarrow \text{true and } \underline{S} \text{ and } S \Rightarrow \text{true and true and } S \Rightarrow \text{true and true and true}$
  - $S \Rightarrow S \text{ and } \underline{S} \Rightarrow S \text{ and true} \Rightarrow S \text{ and } \underline{S} \text{ and true} \Rightarrow S \text{ and true and true} \Rightarrow \text{true and true and true}$
  - $S \Rightarrow S \text{ and } \underline{S} \Rightarrow S \text{ and } S \text{ and } \underline{S} \Rightarrow S \text{ and } \underline{S} \text{ and true} \Rightarrow S \text{ and true and true} \Rightarrow \text{true and true and true}$
  - $S \Rightarrow \underline{S} \text{ and } S \Rightarrow \underline{S} \text{ and } S \text{ and } S \Rightarrow \text{true and } S \text{ and } \underline{S} \Rightarrow \text{true and } S \text{ and true} \Rightarrow \text{true and true and true}$

- vi.  $S \Rightarrow \underline{S}$  and  $S \Rightarrow S$  and  $\underline{S}$  and  $S \Rightarrow \underline{S}$  and true and  $S \Rightarrow$  true and true and  $S \Rightarrow$  true and true and true
- vii.  $S \Rightarrow \underline{S}$  and  $S \Rightarrow S$  and  $\underline{S}$  and  $S \Rightarrow S$  and true and  $\underline{S} \Rightarrow S$  and true and true  $\Rightarrow$  true and true and true
- viii.  $S \Rightarrow \underline{S}$  and  $S \Rightarrow S$  and  $S$  and  $\underline{S} \Rightarrow \underline{S}$  and  $S$  and true  $\Rightarrow$  true and  $S$  and true  $\Rightarrow$  true and true and true
- ix.  $S \Rightarrow \underline{S}$  and  $S \Rightarrow S$  and  $S$  and  $\underline{S} \Rightarrow S$  and  $\underline{S}$  and true  $\Rightarrow S$  and true and true  $\Rightarrow$  true and true and true
- x.  $S \Rightarrow \underline{S}$  and  $S \Rightarrow$  true and  $S \Rightarrow$  true and  $S$  and  $\underline{S} \Rightarrow$  true and  $S$  and true  $\Rightarrow$  true and true and true
- xi.  $S \Rightarrow S$  and  $\underline{S} \Rightarrow S$  and true  $\Rightarrow \underline{S}$  and  $S$  and true  $\Rightarrow$  true and  $S$  and true  $\Rightarrow$  true and true and true
- xii.  $S \Rightarrow S$  and  $\underline{S} \Rightarrow \underline{S}$  and  $S$  and  $S \Rightarrow$  true and  $\underline{S}$  and  $S \Rightarrow$  true and true and  $S \Rightarrow$  true and true and true
- xiii.  $S \Rightarrow S$  and  $\underline{S} \Rightarrow \underline{S}$  and  $S$  and  $S \Rightarrow$  true and  $S$  and  $\underline{S} \Rightarrow$  true and  $S$  and true  $\Rightarrow$  true and true and true
- xiv.  $S \Rightarrow S$  and  $\underline{S} \Rightarrow S$  and  $\underline{S}$  and  $S \Rightarrow \underline{S}$  and true and  $S \Rightarrow$  true and true and  $S \Rightarrow$  true and true and true
- xv.  $S \Rightarrow S$  and  $\underline{S} \Rightarrow S$  and  $\underline{S}$  and  $S \Rightarrow S$  and true and  $\underline{S} \Rightarrow S$  and true and true  $\Rightarrow$  true and true and true
- xvi.  $S \Rightarrow S$  and  $\underline{S} \Rightarrow S$  and  $S$  and  $\underline{S} \Rightarrow \underline{S}$  and  $S$  and true  $\Rightarrow$  true and  $S$  and true  $\Rightarrow$  true and true and true

- b. Label each derivation as left-most, right-most, or neither.  
**i and ii are left-most derivations, iii and iv are right-most derivations, remaining derivations are neither**
- c. List the parse tree for each derivation  
**Tree 1 = ii, iii, x, xi, Tree 2 = rest**

- d. What is implied about the associativity of “and” for each parse tree?  
**Tree 1  $\Rightarrow$  and is right-associative, Tree 2  $\Rightarrow$  and is left-associative**

For the following grammar:  $S \rightarrow S \text{ and } S \mid S \text{ or } S \mid \text{true}$

- e. List all parse trees for the string “true and true or true”

f. What is implied about the precedence/associativity of “and” and “or” for each parse tree?

**Tree 1 => or has higher precedence than and**

**Tree 2 => and has higher precedence than or**

g. Rewrite the grammar so that “and” has higher precedence than “or” and is right associative

**$S \rightarrow S \text{ or } S \mid L$**

**// op closer to Start = lower precedence op**

**$L \rightarrow \text{true and } L \mid \text{true}$**

**// right recursive = right associative**

### 5. Left factoring

Rewrite the following grammars so they can be parsed by a predictive parser by applying left factoring where necessary

a.  $S \rightarrow a b c \mid a c$

↓

**$S \rightarrow a L$**

**$L \rightarrow b c \mid c$**

b.  $S \rightarrow a a \mid a b \mid a$

↓

**$S \rightarrow a L$**

**$L \rightarrow a \mid b \mid \epsilon$**

c.  $S \rightarrow a b A c \mid a b B a$

↓

**$S \rightarrow a b L$**

**$L \rightarrow A c \mid B a$**

d.  $S \rightarrow a a A \mid a a B \mid a c$

↓

**$S \rightarrow a L$**

**$L \rightarrow a A \mid a a B \mid c$**

↓

**$S \rightarrow a L$**

**$L \rightarrow a M \mid c$**

**$M \rightarrow A \mid a B$**

## 6. Parsing

For the problem, assume the term “predictive parser” refers to a top-down, recursive descent, non-backtracking predictive parser.

- a. Consider the following grammar:  $S \rightarrow S \text{ and } S \mid S \text{ or } S \mid (S) \mid \text{true} \mid \text{false}$ 
  - i. Compute First sets for each production and nonterminal  
**First(true) = { “true” }**  
**First(false) = { “false” }**  
**First( S ) = { “(“ }**  
**First( S and S ) = First( S or S ) = First( S ) = { “(“, “true”, “false” }**
  - ii. Explain why the grammar cannot be parsed by a predictive parser  
**First sets of productions intersect, grammar is left recursive**

- b. Consider the following grammar:  $S \rightarrow abS \mid acS \mid c$

- i. Compute First sets for each production and nonterminal  
**First(abS) = { a }**  
**First(acS) = { a }**  
**First(c) = { c }**  
**First(S) = { a, c }**
- ii. Show why the grammar cannot be parsed by a predictive parser.  
**First sets of productions overlap**  
**First(abS)  $\cap$  First(acS) = { a }  $\cap$  { a } = { a }  $\neq \emptyset$**
- iii. Rewrite the grammar so it can be parsed by a predictive parser.  
 **$S \rightarrow aL \mid c$        $L \rightarrow bS \mid cS$**
- iv. Write a predictive parser for the rewritten grammar.

```
parse_S() {
    if (lookahead == "a") {
        match("a"); // S → aL
        parse_L();
    }
    else if (lookahead == "c")
        match("c"); // S → c
    }
    else error();
}

parse_L() {
    if (lookahead == "b") {
        match("b"); // L → bS
        parse_S();
    }
    else if (lookahead == "c") {
        match("c"); // L → cS
        parse_S();
    }
    else error();
}
```

- c. Consider the following grammar:  $S \rightarrow Sa \mid Sc \mid c$
- Show why the grammar cannot be parsed by a predictive parser.  
**First sets of productions intersect, grammar is left recursive**
  - Rewrite the grammar so it can be parsed by a predictive parser.

$S \rightarrow cL$                        $L \rightarrow aL \mid cL \mid \epsilon$

- Write a recursive descent parser for your new grammar

```

parse_S() {
  if (lookahead == "c") {
    match("c"); // S → cL
    parse_L();
  }
  else error( );
}
parse_L() {
  if (lookahead == "a") {
    match("a"); // L → aL
    parse_L();
  }
  else if (lookahead == "c") {
    match("c"); // L → cL
    parse_L();
  }
  else ; // L → ε
}

```
