

Test Oracles

Test Oracle

- A test oracle determines whether a system behaves correctly for test execution
- Webster Dictionary - Oracle
 - a person giving wise or authoritative decisions or opinions
 - an authoritative or wise expression or answer

Purpose of Test Oracle

- **Sequential Systems**

Purpose of Test Oracle

Parts of an Oracle

- Oracle information
 - Specifies what constitutes correct behavior
 - Examples: input/output pairs, embedded assertions
- Oracle procedure
 - Verifies the test execution results with respect to the oracle information
 - Examples: equality
- Test monitor
 - Captures the execution information from the run-time environment
 - Examples
 - Simple systems: directly from output
 - Reactive systems: events, timing information, stimuli, and responses

Approach

- Test class
 - Set of test data described by a condition that constrains input data and the initial system state
- Every test class will have an explicitly represented test oracle
- Results are monitored and verified against the oracle corresponding to all test classes satisfied for the test data

Phases of the Approach

- Oracle derivation
 - From specifications for each test class
- Monitoring test execution
- Mapping and applying the oracle procedure to the execution results

GUI Test Cases

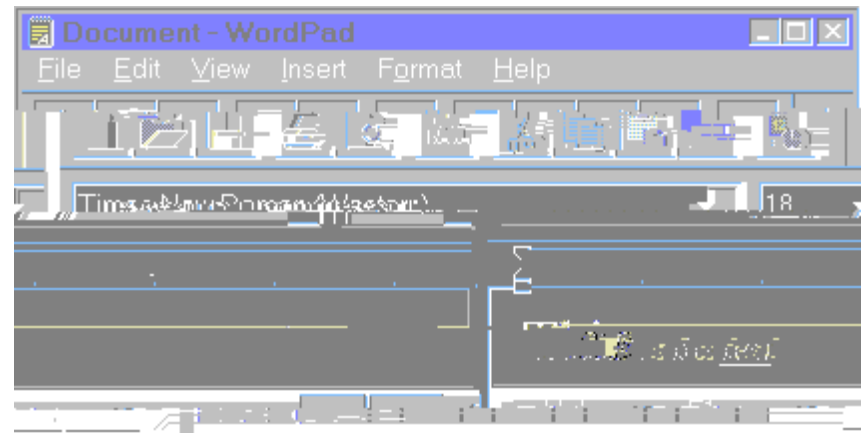

- GUI Test Case
 - Sequence of events

A Test Case for WordPad

What Is Correct Behavior

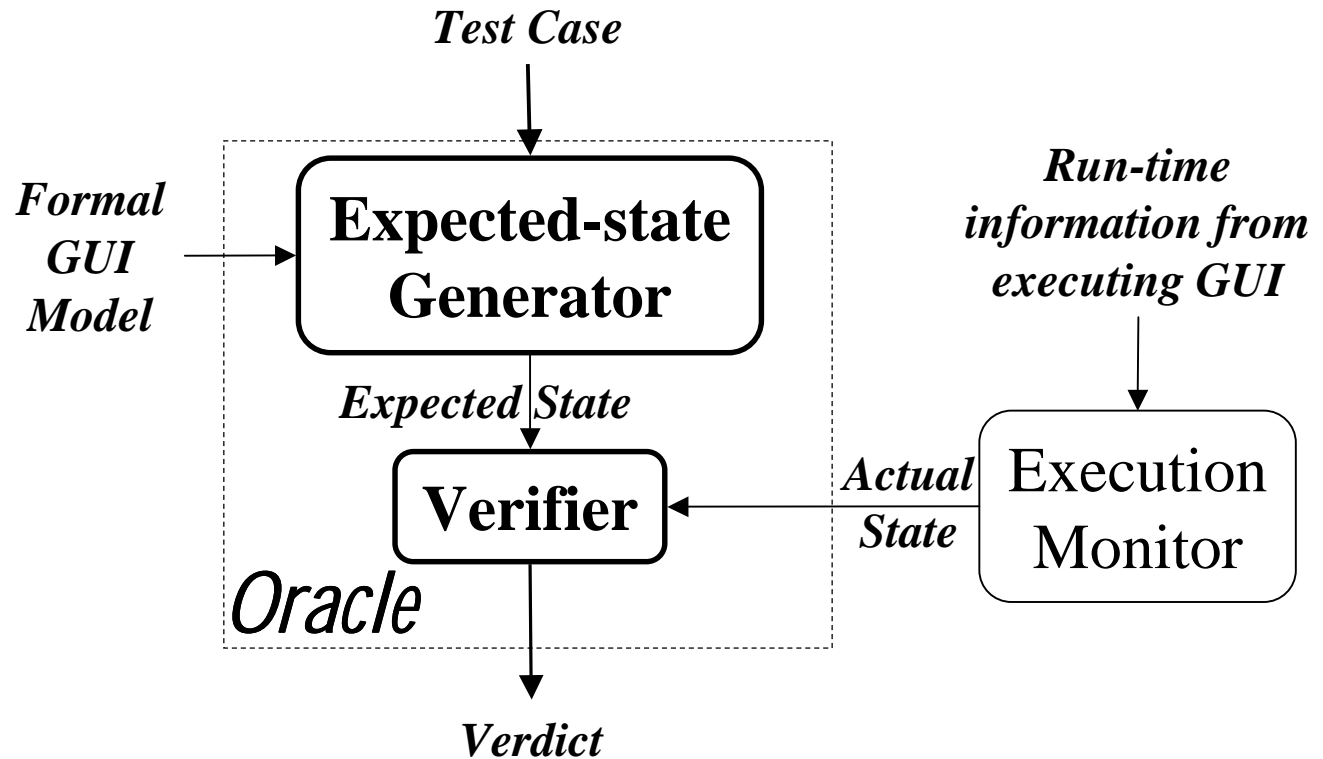

This is the text.

Outline

Overview of GUI Oracle

Modeling Events

- Events are State Transducers

This is the text. •

Representing Events

- We define an event as:

State_j Tm0900191.123032.5rgOTcOT

Operator ::

Deriving Expected State

Obtaining Actual GUI's State

- Execution Monitor
 - Screen Scraping
 - Queries
 - Compatible with Expected State
 - Returns <Object, Property, Value>
<Button1, "Caption", "Cancel">

Automated Execution

The diagram consists of two rectangular boxes. The upper box is divided into two horizontal sections: a dark blue top section containing the text 'Test Executor' in white, and a light gray bottom section. The lower box is white with a green border and contains the text 'Expected State'. The 'Expected State' box is positioned to the left and below the 'Test Executor' box.
