Mars Climate Orbiter

- Purpose: to relay signals from the Mars Polar Lander once it reached the surface of the planet
- Disaster: smashed into the planet instead of reaching a safe orbit
- Why: Software bug - failure to convert English measures to metric values
- $165M

Shooting Down of Airbus 320

- 1988
- US Vicennes shot down Airbus 320
- Mistook Airbus 320 for a F-14
- 290 people dead
- Why: Software bug - cryptic and misleading output displayed by the tracking software

THERAC-25 Radiation Therapy

- THERAC-25, a computer-controlled radiation-therapy machine
- 1986: two cancer patients at the East Texas Cancer Center in Tyler received fatal radiation overdoses
- Why: Software bug - mishandled race condition (i.e., miscoordination between concurrent tasks)

Russia: Software bug made Soyuz stray

STAR CITY, Russia (AP) — A computer software error likely sent a Russian spacecraft into a rare ballistic descent that subjected the three men on board to chest-crushing gravity loads that made it hard to breathe, space experts said Tuesday.

"For me, for a moment, it felt like I was Atlas and I had the weight of the whole world on my shoulders," astronaut Donald Fretti, still a little woozy, told reporters at a crowded news conference.

Spread of buggy software raises new questions

NEW YORK (AP) — More buggy software is being created and slipping into use. And many are being found and fixed, just in time to prevent them from getting where they shouldn’t be.

"Now I think of resetting appliances, not just computers," says Seigle, a software developer in Vienna, Virginia.

Malfunctions caused by bizarre and frustrating glitches are becoming harder and harder to escape now that software controls everything from cell phones to cell phones, trains, cars and power plants.

-- A poorly programmed ground-based altitude warning system was partly responsible for the 1978 Korean Air crash in Guam that killed 238 people.

-- Faulty software in anti-lock brakes forced the recall of 39,000 trucks and tractors and 2,000 school buses in 2000.

-- The $365 million Mars Polar Lander probe was destroyed in its final descent to the planet in 1999, probably because its software shut the engines off 100 feet above the surface.
Economic Impact

- NIST study
  - On CNN.com - April 27, 2003

Last year, a study commissioned by the National Institute of Standards and Technology found that software errors cost the U.S. economy about $59.5 billion annually, or about 0.6 percent of the gross domestic product. More than half the costs are borne by software users, the rest by developers and vendors.

Expectation

- Can’t we expect software to execute correctly?
- Carefully made programs
  - 5 faults/1000 LOC
  - 1M LOC will have 5000 faults
- Windows XP has 45M LOC
  - How many faults?
  - 45 x 5000 = 225,000
  - Why not remove the faults?

Joke?

- “If the automobile industry had developed like the software industry, we would all be driving $25 cars that get 1,000 miles to the gallon.”
- “Yeah, and if cars were like software, they would crash twice a day for no reason, and when you called for service, they’d tell you to reinstall the engine.”
How Cars Are Engineered (A Simple View)

- User requirements
  - Engine power, all-wheel, seating, comfort, MP3 player!
- Detailed design
  - Blueprints, design documents
- Verify design
  - Simulation, prototyping
- Develop parts (components)
  - Test each component
  - Components may be reused
  - Mass produced
- Assemble the car
  - Test the car (Front/side crash tests, Stability tests)
  - Usability testing (Feedback from drivers/passengers)

How Cars Are REALLY Engineered (A Detailed View)

But Seriously

- Features of many LEGO parts
  - Modularity
  - Reusability
    - Each part can be used in different places and ways
  - Flexibility of design
  - Compatibility
    - With other LEGO sets
- Building-blocks

Similar Techniques Used by Builders: Bridges
**Detailed Design and Specifications**

- **Galvanized Bridge Wire for Parallel Wire Bridge Cables.** Recommended diameter: .196 inch.
- **Galvanized Bridge Strand:** consists of several bridge wires, of various diameters twisted together.
- **Galvanized Bridge Rope:** consists of six strands twisted around a central core.

**Parallel Wire Cable**

**More Detailed Design and Specifications**

**Tacoma Narrows Bridge Disaster**

**They Make Mistakes Too!**

- Even good design cannot guarantee a perfect product
- Need testing of all products including software
Interests

- Testing
- Apply it to different types of software (such as web)
- Student introductions and their interests!

Goals of the Course

- Discuss software testing techniques
- Two parts of the course
  - Review testing fundamentals
  - State-of-the-art & emerging techniques
- What do I expect from students?

MS and Ph.D. Qualifying

- Is the course is valid for PhD qualifying coursework?
  - Yes (Software Engineering/Programming Languages)
- Is the course is valid for MS qualifying coursework?
  - Yes (Software Engineering/Programming Languages)
- Is the course is valid for MS comps?
  - Yes (Both Midterm and Final exams count towards the MS comps.)

Assessment

- 25% Mid-term Exam
- 25% Final Exam
- 50% Project
  - Project report
  - Project Presentation
Exam Contents

- Midterm
  - Everything discussed in class
- Final exam
  - Everything discussed/presented after midterm

Testing: Our Experiences

When to Stop?

A Real Testing Example

Philosophy: What are we trying to do?
Automated Testing

1. Test Case
2. Software to be tested
3. Output
   - Verification
   - Test Coverage
   - Enough?
     - No
     - Yes

Automated Testing

1. Test Case
2. Software to be tested
3. Output
   - Test Coverage Evaluator
   - Test Oracle

Testing the New Version

- Original Test Cases
- Original Software
- Modified Software
- New Test Cases

Regression Testing

- Original Test Cases
- Original Software
- Modified Software
- New Test Cases
Discussion

• Different Software Types
  - Object-oriented
  - Component-based
  - Concurrent
  - Distributed
  - Graphical-user Interfaces
  - Web

• Different goals of testing
  - Usability
  - Security
  - Correctness
  - Performance
