## HW 02 Some Solutions

William Gasarch-U of MD

・ロト ・ 理ト ・ ヨト ・ ヨー・ つへぐ

# $\operatorname{COL}: \binom{N}{2} \to \omega. \ \operatorname{COL}': \binom{N}{4} \to [16]$ defined in class.

 $\operatorname{COL}: \binom{N}{2} \to \omega$ .  $\operatorname{COL}': \binom{N}{4} \to [16]$  defined in class. Assume there is a  $\operatorname{COL}'$ -homog set such that:

 $(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$ 

 $\operatorname{COL}: \binom{N}{2} \to \omega$ .  $\operatorname{COL}': \binom{N}{4} \to [16]$  defined in class. Assume there is a  $\operatorname{COL}'$ -homog set such that:

 $(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$ 

ション ふぼう メリン メリン しょうくしゃ

Show that this set, or an infinite subset of it, is COL-homog.

 $\operatorname{COL}: \binom{N}{2} \to \omega$ .  $\operatorname{COL}': \binom{N}{4} \to [16]$  defined in class. Assume there is a  $\operatorname{COL}'$ -homog set such that:

 $(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$ 

Show that this set, or an infinite subset of it, is COL-homog. **SOL**  $H = \{a_1 < a_2 < \cdots\}$ . We take  $H^* = \{a_2, a_3, \cdots\}$ . We show  $H^*$  is COL-homog.

 $\operatorname{COL}: \binom{N}{2} \to \omega$ .  $\operatorname{COL}': \binom{N}{4} \to [16]$  defined in class. Assume there is a  $\operatorname{COL}'$ -homog set such that:

 $(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$ Show that this set, or an infinite subset of it, is COL-homog. **SOL**  $H = \{a_1 < a_2 < \cdots\}.$ We take  $H^* = \{a_2, a_3, \cdots\}.$  We show  $H^*$  is COL-homog.

Let  $2 \le i_1 < i_2$  and  $2 \le j_1 < j_2$ . Let  $k = \max\{i_2, j_2\} + 1$ .

 $\operatorname{COL}: \binom{N}{2} \to \omega$ .  $\operatorname{COL}': \binom{N}{4} \to [16]$  defined in class. Assume there is a  $\operatorname{COL}'$ -homog set such that:

$$(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$$

Show that this set, or an infinite subset of it, is COL-homog. **SOL**  $H = \{a_1 < a_2 < \cdots\}$ . We take  $H^* = \{a_2, a_3, \cdots\}$ . We show  $H^*$  is COL-homog.

Let  $2 \le i_1 < i_2$  and  $2 \le j_1 < j_2$ . Let  $k = \max\{i_2, j_2\} + 1$ . From  $\text{COL}'(a_1, a_{i_1}, a_{i_2}, a_k)$  we know  $\text{COL}(a_1, a_k) = \text{COL}(a_{i_1}, a_{i_2})$ .

ション ふぼう メリン メリン しょうくしゃ

 $\operatorname{COL}: \binom{N}{2} \to \omega$ .  $\operatorname{COL}': \binom{N}{4} \to [16]$  defined in class. Assume there is a  $\operatorname{COL}'$ -homog set such that:

$$(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$$

Show that this set, or an infinite subset of it, is COL-homog. **SOL**  $H = \{a_1 < a_2 < \cdots\}$ . We take  $H^* = \{a_2, a_3, \cdots\}$ . We show  $H^*$  is COL-homog.

Let  $2 \le i_1 < i_2$  and  $2 \le j_1 < j_2$ . Let  $k = \max\{i_2, j_2\} + 1$ . From  $\text{COL}'(a_1, a_{i_1}, a_{i_2}, a_k)$  we know  $\text{COL}(a_1, a_k) = \text{COL}(a_{i_1}, a_{i_2})$ . From  $\text{COL}'(a_1, a_{j_1}, a_{j_2}, a_k)$  we know  $\text{COL}(a_1, a_k) = \text{COL}(a_{j_1}, a_{j_2})$ .

 $\operatorname{COL}: \binom{N}{2} \to \omega$ .  $\operatorname{COL}': \binom{N}{4} \to [16]$  defined in class. Assume there is a  $\operatorname{COL}'$ -homog set such that:

$$(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$$

Show that this set, or an infinite subset of it, is COL-homog. **SOL**  $H = \{a_1 < a_2 < \cdots\}$ . We take  $H^* = \{a_2, a_3, \cdots\}$ . We show  $H^*$  is COL-homog.

Let  $2 \le i_1 < i_2$  and  $2 \le j_1 < j_2$ . Let  $k = \max\{i_2, j_2\} + 1$ . From  $\text{COL}'(a_1, a_{i_1}, a_{i_2}, a_k)$  we know  $\text{COL}(a_1, a_k) = \text{COL}(a_{i_1}, a_{i_2})$ . From  $\text{COL}'(a_1, a_{j_1}, a_{j_2}, a_k)$  we know  $\text{COL}(a_1, a_k) = \text{COL}(a_{j_1}, a_{j_2})$ . Hence  $\text{COL}(a_{i_1}, a_{i_2}) = \text{COL}(a_{j_1}, a_{j_2})$ .

Could we have left  $a_1$  in? We have:

$$(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$$

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Could we have left  $a_1$  in? We have:

$$(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$$

▲□▶ ▲□▶ ▲目▶ ▲目▶ 二目 - のへで

The following coloring has that property but is NOT homog.

Could we have left  $a_1$  in? We have:

$$(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$$

The following coloring has that property but is NOT homog.

$$\operatorname{COL}(a_1, a_2) = R$$

▲□▶ ▲□▶ ▲目▶ ▲目▶ 二目 - のへで

Could we have left  $a_1$  in? We have:

$$(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$$

The following coloring has that property but is NOT homog.

$$\operatorname{COL}(a_1, a_2) = R$$

$$(\forall j \geq 3)[\operatorname{COL}(a_1, a_j) = B]$$

▲□▶ ▲□▶ ▲目▶ ▲目▶ 二目 - のへで

Could we have left  $a_1$  in? We have:

$$(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$$

The following coloring has that property but is NOT homog.

$$\operatorname{COL}(a_1, a_2) = R$$

$$(\forall j \geq 3)[\operatorname{COL}(a_1, a_j) = B]$$

$$(\forall i, j \geq 2)[\operatorname{COL}(a_i, a_j) = B]$$

▲□▶ ▲□▶ ▲目▶ ▲目▶ 二目 - のへで

Could we have left  $a_1$  in? We have:

$$(\forall x_1 < x_2 < x_3 < x_4 \in H)[COL(x_2, x_3) = COL(x_1, x_4)].$$

The following coloring has that property but is NOT homog.

 $\operatorname{COL}(a_1, a_2) = R$ 

$$(\forall j \geq 3)[\operatorname{COL}(a_1, a_j) = B]$$

$$(\forall i, j \geq 2)[\operatorname{COL}(a_i, a_j) = B]$$

Can check it satisfies condition. Easily seen to not be homog.

|X| = n, COL :  $\binom{X}{2} \rightarrow [\omega]$ . For all  $x \in X$  and colors c,  $\deg_c(x) \leq 1$ . If M is MAXIMAL rainb then  $|M| \geq \Omega(f(n))$ .

\*ロ \* \* @ \* \* ミ \* ミ \* ・ ミ \* の < や

|X| = n, COL:  $\binom{X}{2} \rightarrow [\omega]$ . For all  $x \in X$  and colors c, deg<sub>c</sub>(x)  $\leq 1$ . If M is MAXIMAL rainb then  $|M| \geq \Omega(f(n))$ . **SOL** Assume, BWOC,  $|M| \leq f(n)$ , so  $|X - M| \geq n - f(n)$ .

|X| = n, COL:  $\binom{X}{2} \rightarrow [\omega]$ . For all  $x \in X$  and colors c,  $\deg_c(x) \leq 1$ . If M is MAXIMAL rainb then  $|M| \geq \Omega(f(n))$ . **SOL** Assume, BWOC,  $|M| \leq f(n)$ , so  $|X - M| \geq n - f(n)$ . Map X - M into  $\binom{M}{2} \times M$ :

 $x \in X - M$  maps to  $(\{p,q\},r)$  with COL(x,r) = COL(p,q).

|X| = n, COL:  $\binom{X}{2} \rightarrow [\omega]$ . For all  $x \in X$  and colors c,  $\deg_c(x) \leq 1$ . If M is MAXIMAL rainb then  $|M| \geq \Omega(f(n))$ . **SOL** Assume, BWOC,  $|M| \leq f(n)$ , so  $|X - M| \geq n - f(n)$ . Map X - M into  $\binom{M}{2} \times M$ :

 $x \in X - M$  maps to  $(\{p, q\}, r)$  with COL(x, r) = COL(p, q).

From  $\deg_c(x) \leq 1$  get Map is 1-1.

|X| = n, COL:  $\binom{X}{2} \rightarrow [\omega]$ . For all  $x \in X$  and colors c,  $\deg_c(x) \leq 1$ . If M is MAXIMAL rainb then  $|M| \geq \Omega(f(n))$ . **SOL** Assume, BWOC,  $|M| \leq f(n)$ , so  $|X - M| \geq n - f(n)$ . Map X - M into  $\binom{M}{2} \times M$ :

 $x \in X - M$  maps to  $(\{p, q\}, r)$  with COL(x, r) = COL(p, q).

From  $\deg_c(x) \leq 1$  get Map is 1-1.

There is a 1-1 map from X - M to  $M \times {\binom{M}{2}}$ .

|X| = n, COL:  $\binom{X}{2} \rightarrow [\omega]$ . For all  $x \in X$  and colors c,  $\deg_c(x) \leq 1$ . If M is MAXIMAL rainb then  $|M| \geq \Omega(f(n))$ . **SOL** Assume, BWOC,  $|M| \leq f(n)$ , so  $|X - M| \geq n - f(n)$ . Map X - M into  $\binom{M}{2} \times M$ :

 $x \in X - M$  maps to  $(\{p,q\},r)$  with COL(x,r) = COL(p,q).

From  $\deg_c(x) \leq 1$  get Map is 1-1.

There is a 1-1 map from X - M to  $M \times {\binom{M}{2}}$ . Finish on next slide.

## Problem 3 (cont)

There is a 1-1- map from X - M to  $M \times {\binom{M}{2}}$ . So

$$|X-M| \leq \left|M \times \binom{M}{2}\right| \leq \frac{|M|^3}{2} \leq \frac{f(n)^3}{2}.$$

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

## Problem 3 (cont)

There is a 1-1- map from X - M to  $M \times {\binom{M}{2}}$ . So

$$|X-M| \leq \left|M \times {M \choose 2}\right| \leq \frac{|M|^3}{2} \leq \frac{f(n)^3}{2}.$$

<□ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

Recall that  $|M| \leq f(n)$  so  $|X - M| \geq n - f(n)$ .

## Problem 3 (cont)

There is a 1-1- map from X - M to  $M \times {\binom{M}{2}}$ . So

$$|X-M| \leq \left|M \times {M \choose 2}\right| \leq \frac{|M|^3}{2} \leq \frac{f(n)^3}{2}.$$

Recall that  $|M| \leq f(n)$  so  $|X - M| \geq n - f(n)$ .

$$|n-f(n)| \leq |X-M| \leq \left|M \times \binom{M}{2}\right| \leq \frac{|M|^3}{2} \leq \frac{f(n)^3}{2}.$$

We seek a contradiction.  $f(n) = n^{1/3}$  will work.

**Theorem** Let X be an infinite set of points in the plane. Then  $(\exists Y \subseteq X), |Y| = \infty$ , so that all of the distances between points in Y are different.

\*ロ \* \* @ \* \* ミ \* ミ \* ・ ミ \* の < や

**Theorem** Let X be an infinite set of points in the plane. Then  $(\exists Y \subseteq X), |Y| = \infty$ , so that all of the distances between points in Y are different.

**Proof** Order the points arbitrarily.

 $X = \{p_1, p_2, \ldots\}$ 

**Theorem** Let X be an infinite set of points in the plane. Then  $(\exists Y \subseteq X), |Y| = \infty$ , so that all of the distances between points in Y are different.

**Proof** Order the points arbitrarily.

$$X = \{p_1, p_2, \ldots\}$$

ション ふゆ アメビア メロア しょうくしゃ

Let COL:  $\binom{N}{2} \to \mathbb{R}$  be defined by COL $(i, j) = |p_i - p_j|$ .

**Theorem** Let X be an infinite set of points in the plane. Then  $(\exists Y \subseteq X), |Y| = \infty$ , so that all of the distances between points in Y are different.

**Proof** Order the points arbitrarily.

$$X = \{p_1, p_2, \ldots\}$$

Let COL:  $\binom{N}{2} \to \mathbb{R}$  be defined by  $\operatorname{COL}(i,j) = |p_i - p_j|$ . The number of reals in the image of the colorings is countable so we can apply Can Ramsey. When we apply it we find that there is a set  $H \subseteq \mathbb{N}$ ,  $|H| = \infty$  that is either homog, max-homog, min-homog, or rainb. We show H rainb, so all distances different.

**Theorem** Let X be an infinite set of points in the plane. Then  $(\exists Y \subseteq X), |Y| = \infty$ , so that all of the distances between points in Y are different.

**Proof** Order the points arbitrarily.

$$X = \{p_1, p_2, \ldots\}$$

Let COL:  $\binom{N}{2} \to \mathbb{R}$  be defined by  $\operatorname{COL}(i,j) = |p_i - p_j|$ . The number of reals in the image of the colorings is countable so we can apply Can Ramsey. When we apply it we find that there is a set  $H \subseteq \mathbb{N}$ ,  $|H| = \infty$  that is either homog, max-homog, min-homog, or rainb. We show H rainb, so all distances different. Three cases: homog, min-homog, max-homog.

## Problem 4, H Homog

*H* is homog.

## Problem 4, H Homog

*H* is homog.

Then there are an infinite number of points that are all the same distance apart.

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

*H* is homog.

Then there are an infinite number of points that are all the same distance apart.

Exercise: cannot have 4 points in the plane with all distances the same.

\*ロ \* \* @ \* \* ミ \* ミ \* ・ ミ \* の < や

 $(\forall i, j \ge 2)[|p_1 - p_i| = |p_1 - p_j|].$ So  $p_2, p_3, \dots$  are on a circle centered at  $p_1$ .

 $(\forall i, j \ge 2)[|p_1 - p_i| = |p_1 - p_j|].$ So  $p_2, p_3, \ldots$  are on a circle centered at  $p_1$ .

 $(\forall i, j \ge 3)[|p_2 - p_i| = |p_2 - p_j|].$ So  $p_3, p_4, \dots$  are on a circle centered at  $p_2$ .

 $(\forall i, j \ge 2)[|p_1 - p_i| = |p_1 - p_j|].$ So  $p_2, p_3, \ldots$  are on a circle centered at  $p_1$ .

 $(\forall i, j \ge 3)[|p_2 - p_i| = |p_2 - p_j|].$ So  $p_3, p_4, \dots$  are on a circle centered at  $p_2$ .

Combine:  $p_3$ ,  $p_4$ ,  $p_5$  are all on both a circle centered at  $p_1$  and a circle centered at  $p_2$ .

 $(\forall i, j \ge 2)[|p_1 - p_i| = |p_1 - p_j|].$ So  $p_2, p_3, \ldots$  are on a circle centered at  $p_1$ .

 $(\forall i, j \ge 3)[|p_2 - p_i| = |p_2 - p_j|].$ So  $p_3, p_4, \dots$  are on a circle centered at  $p_2$ .

Combine:  $p_3$ ,  $p_4$ ,  $p_5$  are all on both a circle centered at  $p_1$  and a circle centered at  $p_2$ .

But two circles with diff centers intersect in at most 2 points. Contradiction.

 $(\forall i, j \leq 4)[|p_4 - p_i| = |p_4 - p_j|].$ So  $p_1, p_2, p_3$  are on a circle centered at  $p_4$ .
