**SOL** Plan: (1) there is one isolated point, and (2) all other points come in sets of  $C_4$ 's.  $(\exists x)$  the AND of the following:  $(\forall y)[\neg E(x, y)].$ 

Give a sentence  $\phi$  in the language of graphs such that

$$\operatorname{spec}(\phi) = \{ n \colon n \equiv 1 \pmod{4} \}.$$

**SOL** Plan: (1) there is one isolated point, and (2) all other points come in sets of  $C_4$ 's. ( $\exists x$ ) the AND of the following: ( $\forall y$ )[ $\neg E(x, y)$ ]. x is an isolated vertex.

ション ふゆ アメビア メロア しょうくしゃ

Give a sentence  $\phi$  in the language of graphs such that

$$\operatorname{spec}(\phi) = \{ n \colon n \equiv 1 \pmod{4} \}.$$

**SOL** Plan: (1) there is one isolated point, and (2) all other points come in sets of  $C_4$ 's. ( $\exists x$ ) the AND of the following: ( $\forall y$ )[ $\neg E(x, y)$ ]. x is an isolated vertex.

 $(\forall y \neq x)(\exists z_1, z_2)[E(y, z_1) \land E(y, z_2) \land (\forall w \neq z_1, z_2)[\neg E(y, w)]]$ 

ション ふぼう メリン メリン しょうくしゃ

Give a sentence  $\phi$  in the language of graphs such that

$$\operatorname{spec}(\phi) = \{ n \colon n \equiv 1 \pmod{4} \}.$$

**SOL** Plan: (1) there is one isolated point, and (2) all other points come in sets of  $C_4$ 's. ( $\exists x$ ) the AND of the following: ( $\forall y$ )[ $\neg E(x, y)$ ]. x is an isolated vertex.

 $(\forall y \neq x)(\exists z_1, z_2)[E(y, z_1) \land E(y, z_2) \land (\forall w \neq z_1, z_2)[\neg E(y, w)]]$ All vertices except x have degree exactly 2.

ション ふぼう メリン メリン しょうくしゃ

Give a sentence  $\phi$  in the language of graphs such that

$$\operatorname{spec}(\phi) = \{ n \colon n \equiv 1 \pmod{4} \}.$$

**SOL** Plan: (1) there is one isolated point, and (2) all other points come in sets of  $C_4$ 's. ( $\exists x$ ) the AND of the following: ( $\forall y$ )[ $\neg E(x, y)$ ]. x is an isolated vertex.

 $(\forall y \neq x)(\exists z_1, z_2)[E(y, z_1) \land E(y, z_2) \land (\forall w \neq z_1, z_2)[\neg E(y, w)]]$ All vertices except x have degree exactly 2.

 $(\forall y \neq x)(\exists y_1, y_2, y_3)[E(y, y_1) \land E(y_1, y_2) \land E(y_2, y_3) \land E(y_3, y)]$ 

Give a sentence  $\phi$  in the language of graphs such that

$$\operatorname{spec}(\phi) = \{ n \colon n \equiv 1 \pmod{4} \}.$$

**SOL** Plan: (1) there is one isolated point, and (2) all other points come in sets of  $C_4$ 's. ( $\exists x$ ) the AND of the following: ( $\forall y$ )[ $\neg E(x, y)$ ]. x is an isolated vertex.

 $(\forall y \neq x)(\exists z_1, z_2)[E(y, z_1) \land E(y, z_2) \land (\forall w \neq z_1, z_2)[\neg E(y, w)]]$ All vertices except x have degree exactly 2.

 $(\forall y \neq x)(\exists y_1, y_2, y_3)[E(y, y_1) \land E(y_1, y_2) \land E(y_2, y_3) \land E(y_3, y)]$ Every non-x vert is in a  $C_4$ . All non-x verts have deg 2, so the  $y_1, y_2, y_3, y$  are in a  $C_4$  and are not connected to anything else.

#### **Statement of Prob 3**

We use the language of 3-hypergraphs. One predicate: E(x, y, z). We assume E is symmetric.

$$\phi = (\exists x_1) \cdots (\exists x_n) (\forall y_1) \cdots (\forall y_m) [\psi(x_1, \dots, x_n, y_1, \dots, y_m)]$$
  
If  $(\exists N \ge X(n, m)) [N \in \operatorname{spec}(\phi)]$  then  
 $\{n + m, n + m + 1, \dots\} \subseteq \operatorname{spec}(\phi).$ 

\*ロ \* \* @ \* \* ミ \* ミ \* ・ ミ \* の < や

Fill in the X and prove it.

#### SOL to Prob 3: Sets U, Y

Assume  $\exists$  3-hypergraph G = (V, E) on  $\geq X$  vertices,  $G \models \phi$ . Witnesses:  $u_1, \ldots, u_n$  be the witnesses.

$$U = \{u_1, \ldots, u_n\}$$
  $Y = V - U$   $|Y| = X - n = A.$ 

$$Y = \{y_1, \ldots, y_A\}$$

\*ロ \* \* @ \* \* ミ \* ミ \* ・ ミ \* の < や

Want Y superhomog.

# **SOL to Prob 3 Y and** $\begin{pmatrix} U \\ 2 \end{pmatrix}$

Map  $y_i \in Y$  to the  $\binom{n}{2}$  sized vector indexed by  $\binom{[n]}{2}$ : The  $\{a, b\}$  entry is  $E(y_i, a, b)$ .

\*ロ \* \* @ \* \* ミ \* ミ \* ・ ミ \* の < や

# **SOL to Prob 3 Y and** $\binom{U}{2}$

Map  $y_i \in Y$  to the  $\binom{n}{2}$  sized vector indexed by  $\binom{[n]}{2}$ : The  $\{a, b\}$  entry is  $E(y_i, a, b)$ . We map A elt to  $2^{\binom{n}{2}}$  elts.

$$18k = 8 \times 9 = 18 \times 4$$

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Great! We take k = 4. SO  $L(3) \le 73$ .

$$(\forall k \in \mathsf{N})[\operatorname{COL}(1) = \operatorname{COL}(1+18k)]$$

We need

$$18k = x^2 + x = x(x+1)$$

OH- lets take x = 8.

 $18k = 8 \times 9 = 18 \times 4$

Great! We take k = 4. SO  $L(3) \le 73$ . Can we do better? I do not know.
