BILL, RECORD LECTURE!!!!

BILL RECORD LECTURE!!!

Exposition by William Gasarch-U of MD

*ロ * * @ * * ミ * ミ * ・ ミ * の < や

Writing a number as a sum of powers of 2.

$$1000 = 2^9 + 2^8 + 2^7 + 2^6 + 2^5 + 2^3$$

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Writing a number as a sum of powers of 2.

$$1000 = 2^9 + 2^8 + 2^7 + 2^6 + 2^5 + 2^3$$

But we can also write the exponents as sums of powers of 2

$$1000 = 2^{2^3 + 2^0} + 2^{2^3} + 2^{2^2 + 2^1 + 2^0} + 2^{2^2 + 2^1} + 2^{2^2 + 2^0} + 2^{2^1 + 2^0}$$

Writing a number as a sum of powers of 2.

$$1000 = 2^9 + 2^8 + 2^7 + 2^6 + 2^5 + 2^3$$

But we can also write the exponents as sums of powers of 2

$$1000 = 2^{2^3 + 2^0} + 2^{2^3} + 2^{2^2 + 2^1 + 2^0} + 2^{2^2 + 2^1} + 2^{2^2 + 2^0} + 2^{2^1 + 2^0}$$

We can even write the exponents that are not already powers of 2 as sums of powers of 2.

$$1000 = 2^{2^{2^{2^{0}}+2^{0}}+2^{0}} + 2^{2^{2^{1}+2^{0}}} + 2^{2^{2}+2^{2^{0}}+2^{0}} + 2^{2^{2}+2^{0}} + 2^{2^{2}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{0} + 2^{0} + 2$$

◆□▶ ◆□▶ ◆ 臣▶ ◆ 臣▶ ─ 臣 ─ のへで

Writing a number as a sum of powers of 2.

$$1000 = 2^9 + 2^8 + 2^7 + 2^6 + 2^5 + 2^3$$

But we can also write the exponents as sums of powers of 2

$$1000 = 2^{2^3 + 2^0} + 2^{2^3} + 2^{2^2 + 2^1 + 2^0} + 2^{2^2 + 2^1} + 2^{2^2 + 2^0} + 2^{2^1 + 2^0}$$

We can even write the exponents that are not already powers of 2 as sums of powers of 2.

$$1000 = 2^{2^{2^{0}+2^{0}}+2^{0}} + 2^{2^{2^{1}+2^{0}}} + 2^{2^{2}+2^{2^{0}}+2^{0}} + 2^{2^{2}+2^{0}} + 2^{2^{2}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{2^{0}}+2^{0}} + 2^{2^{0}}$$

This is called **Hereditary Base** *n* **Notation**

 $1000 = 2^{2^{2^{2^0}+2^0}} + 2^{2^{2^1+2^0}} + 2^{2^2+2^2^0} + 2^{2^2+2^0} + 2^{2^2+2^0} + 2^{2^2+2^0} + 2^{2^{2^0}+2^0}$ Replace all of the 2's with 3's:

$$3^{3^{3^{3^0}+3^0}+3^0}+3^{3^{3^1+3^0}}+3^{3^3+3^{3^0}+3^0}+3^{3^3+3^{3^0}}+3^{3^3+3^0}+3^{3^3+3^0}+3^{3^{3^0}+3^0}$$

 $1000 = 2^{2^{2^{2^0}+2^0}} + 2^{2^{2^1+2^0}} + 2^{2^2+2^2^0} + 2^{2^2+2^0} + 2^{2^2+2^0} + 2^{2^2+2^0} + 2^{2^{2^0}+2^0}$ Replace all of the 2's with 3's:

$$3^{3^{3^{3^0}+3^0}+3^0}+3^{3^{3^1+3^0}}+3^{3^3+3^{3^0}+3^0}+3^{3^3+3^{3^0}}+3^{3^3+3^0}+3^{3^{3^0}+3^0}$$

This number just went WAY up. Now subtract 1.

$$3^{3^{3^{3^0}+3^0}+3^0}+3^{3^{3^1+3^0}}+3^{3^3+3^{3^0}+3^0}+3^{3^3+3^{3^0}}+3^{3^3+3^0}+3^{3^3+3^0}+3^{3^{3^0}+3^0}-1$$

 $1000 = 2^{2^{2^{2^{0}}+2^{0}}} + 2^{2^{2^{1}+2^{0}}} + 2^{2^{2}+2^{2^{0}}+2^{0}} + 2^{2^{2}+2^{0}} + 2^{2^{2}+2^{0}} + 2^{2^{2^{0}}+2^{0}}$ Replace all of the 2's with 3's:

$$3^{3^{3^{3^0}+3^0}+3^0}+3^{3^{3^1+3^0}}+3^{3^3+3^{3^0}+3^0}+3^{3^3+3^{3^0}}+3^{3^3+3^0}+3^{3^{3^0}+3^0}$$

This number just went WAY up. Now subtract 1.

$$3^{3^{3^{3^0}+3^0}+3^0}+3^{3^{3^1+3^0}}+3^{3^3+3^{3^0}+3^0}+3^{3^3+3^{3^0}}+3^{3^3+3^0}+3^{3^3+3^0}+3^{3^{3^0}+3^0}-1$$

Repeat the process: Replace 3 by 4, and subtract 1, Replace 4 by 5, and subtract 1, \cdots .

 $1000 = 2^{2^{2^{2^{0}}+2^{0}}} + 2^{2^{2^{1}+2^{0}}} + 2^{2^{2}+2^{2^{0}}+2^{0}} + 2^{2^{2}+2^{0}} + 2^{2^{2}+2^{0}} + 2^{2^{2^{0}}+2^{0}}$ Replace all of the 2's with 3's:

$$3^{3^{3^{3^0}+3^0}+3^0}+3^{3^{3^1+3^0}}+3^{3^3+3^{3^0}+3^0}+3^{3^3+3^{3^0}}+3^{3^3+3^0}+3^{3^{3^0}+3^0}$$

This number just went WAY up. Now subtract 1.

$$3^{3^{3^{3^0}+3^0}+3^0}+3^{3^{3^1+3^0}}+3^{3^3+3^{3^0}+3^0}+3^{3^3+3^{3^0}}+3^{3^3+3^0}+3^{3^3+3^0}+3^{3^{3^0}+3^0}-1$$

Repeat the process:

Replace 3 by 4, and subtract 1, Replace 4 by 5, and subtract 1, ···. **Vote** Does the sequence:

- Goto infinity (and if so how fast- perhaps Ack-like?)
- Eventually stabilizes (e.g., goes to 18 and then stops there)
- Cycles- goes UP then DOWN then UP then DOWN

The Sequence...

The Sequence...

goes to 0.

goes to 0.

The number of steps for *n* to go o 0 is **much bigger** than A(n, n).

goes to 0.

The number of steps for n to go to 0 is **much bigger** than A(n, n). **Really? Really!**

1. Contains most of the ideas. Yeah!

We will not deal with the actual Goodstein Sequence defined above. **Boo!**

We will instead deal with a weaker version that

- 1. Contains most of the ideas. Yeah!
- 2. Will go to 0 before the heat death of the Universe.

We will not deal with the actual Goodstein Sequence defined above. **Boo!**

We will instead deal with a weaker version that

- 1. Contains most of the ideas. Yeah!
- 2. Will go to 0 before the heat death of the Universe. Yeah!

Take a number in base 10.

Take a number in base 10. $(986)_{10} = 9 \times 10^2 + 8 \times 10^1 + 6 \times 10^0.$

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Take a number in base 10.

 $(986)_{10} = 9 \times 10^2 + 8 \times 10^1 + 6 \times 10^0.$

Increase the base and subtract 1. Assume BWOC that the seq goes on forever.

 $9 \times 11^2 + 8 \times 11^1 + 6 \times 11^0 - 1 = 9 \times 11^2 + 8 \times 11^1 + 5 \times 11^0 = (985)_{11}.$

ション ふゆ アメリア メリア しょうくしゃ

Take a number in base 10.

 $(986)_{10} = 9 \times 10^2 + 8 \times 10^1 + 6 \times 10^0.$

Increase the base and subtract 1. Assume BWOC that the seq goes on forever.

 $9 \times 11^2 + 8 \times 11^1 + 6 \times 11^0 - 1 = 9 \times 11^2 + 8 \times 11^1 + 5 \times 11^0 = (985)_{11}.$

Repeat this to get: $(984)_{12}$, $(983)_{13}$, $(982)_{14}$, $(981)_{15}$, $(980)_{16}$.

Take a number in base 10.

$$(986)_{10} = 9 \times 10^2 + 8 \times 10^1 + 6 \times 10^0.$$

Increase the base and subtract 1. Assume BWOC that the seq goes on forever.

$$9 \times 11^{2} + 8 \times 11^{1} + 6 \times 11^{0} - 1 = 9 \times 11^{2} + 8 \times 11^{1} + 5 \times 11^{0} = (985)_{11}.$$

Repeat this to get: $(984)_{12}$, $(983)_{13}$, $(982)_{14}$, $(981)_{15}$, $(980)_{16}$.

$$(980)_{16} = 9 \times 16^2 + 8 \times 16^1$$

*ロ * * @ * * ミ * ミ * ・ ミ * の < や

Take a number in base 10.

$$(986)_{10} = 9 \times 10^2 + 8 \times 10^1 + 6 \times 10^0.$$

Increase the base and subtract 1. Assume BWOC that the seq goes on forever.

$$9 \times 11^{2} + 8 \times 11^{1} + 6 \times 11^{0} - 1 = 9 \times 11^{2} + 8 \times 11^{1} + 5 \times 11^{0} = (985)_{11}.$$

Repeat this to get: $(984)_{12}$, $(983)_{13}$, $(982)_{14}$, $(981)_{15}$, $(980)_{16}$.

$$(980)_{16} = 9 \times 16^2 + 8 \times 16^1$$

*ロ * * @ * * ミ * ミ * ・ ミ * の < や

Note that the right most digit is 0. That will happen ∞ often.

 $(980)_{16} = 9 \times 16^2 + 8 \times 16^1$

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Increase the base and subtract 1 to get

$$(980)_{16} = 9 \times 16^2 + 8 \times 16^1$$

Increase the base and subtract 1 to get

$$9 \times 17^2 + 8 \times 17^1 - 1 = 9 \times 17^2 + 7 \times 17^1 + 16 \times 17^0 = (97(16))_{17}$$

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

$$(980)_{16} = 9 \times 16^2 + 8 \times 16^1$$

Increase the base and subtract 1 to get

$$9 \times 17^2 + 8 \times 17^1 - 1 = 9 \times 17^2 + 7 \times 17^1 + 16 \times 17^0 = (97(16))_{17}$$

The second digit decreased!

$$(980)_{16} = 9 \times 16^2 + 8 \times 16^1$$

Increase the base and subtract 1 to get

$$9 \times 17^2 + 8 \times 17^1 - 1 = 9 \times 17^2 + 7 \times 17^1 + 16 \times 17^0 = (97(16))_{17}$$

▲□▶ ▲□▶ ▲目▶ ▲目▶ 三日 - のへで

The second digit decreased! Recap and go forward:

$$(980)_{16} = 9 \times 16^2 + 8 \times 16^1$$

Increase the base and subtract 1 to get

$$9 \times 17^{2} + 8 \times 17^{1} - 1 = 9 \times 17^{2} + 7 \times 17^{1} + 16 \times 17^{0} = (97(16))_{17}$$

The second digit decreased! Recap and go forward:

$$(986)_{10}
ightarrow (980)_{16}
ightarrow (97(16))_{17}
ightarrow (970)_{33}$$

▲□▶ ▲□▶ ▲目▶ ▲目▶ 三日 - のへの

$$(980)_{16} = 9 \times 16^2 + 8 \times 16^1$$

Increase the base and subtract 1 to get

$$9 \times 17^{2} + 8 \times 17^{1} - 1 = 9 \times 17^{2} + 7 \times 17^{1} + 16 \times 17^{0} = (97(16))_{17}$$

The second digit decreased! Recap and go forward:

The term Natural Theorem is not well defined.

・ロト・日本・ヨト・ヨト・ヨー つへぐ

The term **Natural Theorem** is not well defined. Even so, here are some uses of it:

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

The term **Natural Theorem** is not well defined. Even so, here are some uses of it:

1) The Simplex Method is a really fast algorithm for Linear Programming. There are some unnatural instances for which is runs in exponential time. Why unnatural? Because these instances were constructed for the sole purpose of being hard for the simplex method. They would never occur in real life.

The term **Natural Theorem** is not well defined. Even so, here are some uses of it:

1) **The Simplex Method** is a really fast algorithm for Linear Programming. There are some **unnatural** instances for which is runs in exponential time. Why **unnatural**? Because these instances were constructed for the sole purpose of being hard for the simplex method. They would never occur in real life.

2) Intermediate Sets. Assume $P \neq NP$. Is there a set X between P and NP? That is, (a) $X \notin P$, (b) $X \in NP$, (c) X is not NP-complete?

- 2. The proof for strong Goodstein is similar but requires some other ideas.

Goodstein's Thm The strong Goodstein seq always goes to 0.

Do you find his theorem to be natural? This is not a VOTE since it's a matter of opinion and **natural** is not well defined.

Next Slide will indicate why am asking this.

Peano Arithmetic (PA) is a standard system of axioms. Almost all theorems from Number Theory and combinatorics can be proven in PA.

Peano Arithmetic (PA) is a standard system of axioms. Almost all theorems from Number Theory and combinatorics can be proven in PA.

Godel's Inc Thm \exists statements that are TRUE but cannot be proven in PA.

Peano Arithmetic (PA) is a standard system of axioms. Almost all theorems from Number Theory and combinatorics can be proven in PA.

Godel's Inc Thm \exists statements that are TRUE but cannot be proven in PA.

The statements Godel obtained were **not natural**. They were designed for the whole purpose of being unprovable in PA.

 $R_3(k)$ is bounded by TOW which is PR: 6 recursions. $R_4(k)$ is bounded by WOW which is PR: 7 recursions.

▲□▶ ▲□▶ ▲目▶ ▲目▶ 三日 - のへで

 $R_3(k)$ is bounded by TOW which is PR: 6 recursions. $R_4(k)$ is bounded by WOW which is PR: 7 recursions. $R_a(k)$ is bounded by NO NAME which is PR: a + 3 recursions.

 $R_3(k)$ is bounded by TOW which is PR: 6 recursions. $R_4(k)$ is bounded by WOW which is PR: 7 recursions. $R_a(k)$ is bounded by NO NAME which is PR: a + 3 recursions. Function $f(a, k) = R_a(k)$ is bounded by A(a, k) Not PR.

 $R_3(k)$ is bounded by TOW which is PR: 6 recursions. $R_4(k)$ is bounded by WOW which is PR: 7 recursions. $R_a(k)$ is bounded by NO NAME which is PR: a + 3 recursions. Function $f(a, k) = R_a(k)$ is bounded by A(a, k) Not PR. Thats just a bound. What is the reality?

 $R_3(k)$ is bounded by TOW which is PR: 6 recursions. $R_4(k)$ is bounded by WOW which is PR: 7 recursions. $R_a(k)$ is bounded by NO NAME which is PR: a + 3 recursions. Function $f(a, k) = R_a(k)$ is bounded by A(a, k) Not PR. Thats just a bound. What is the reality? Vote

 $R_3(k)$ is bounded by TOW which is PR: 6 recursions. $R_4(k)$ is bounded by WOW which is PR: 7 recursions. $R_a(k)$ is bounded by NO NAME which is PR: a + 3 recursions. Function $f(a, k) = R_a(k)$ is bounded by A(a, k) Not PR. Thats just a bound. What is the reality? Vote 1) $f(a, k) = R_a(k)$ grows at rate around A(a, k).

 $R_3(k)$ is bounded by TOW which is PR: 6 recursions. $R_4(k)$ is bounded by WOW which is PR: 7 recursions. $R_a(k)$ is bounded by NO NAME which is PR: a + 3 recursions. Function $f(a, k) = R_a(k)$ is bounded by A(a, k) Not PR. Thats just a bound. What is the reality? Vote 1) $f(a, k) = R_a(k)$ grows at rate around A(a, k). 2) f(a, k) is Prim Rec.

 $R_3(k)$ is bounded by TOW which is PR: 6 recursions. $R_4(k)$ is bounded by WOW which is PR: 7 recursions. $R_a(k)$ is bounded by NO NAME which is PR: a + 3 recursions. Function $f(a, k) = R_a(k)$ is bounded by A(a, k) Not PR. Thats just a bound. What is the reality? **Vote** 1) $f(a, k) = R_a(k)$ grows at rate around A(a, k). 2) f(a, k) is Prim Rec. Answer on Next Slide.

・ロト・西ト・モート ヨー シタク

<ロト < @ ト < 差 ト < 差 ト 差 の < @</p>

f(a, k) is Prim Rec.

f(a, k) is Prim Rec.

We will show that $R_3(k) \leq 2^{2^{4k}}$.

f(a, k) is Prim Rec.

We will show that $R_3(k) \leq 2^{2^{4k}}$.

We will see that $R_a(k)$ is bounded by a stack a - 1 2's.
