Lets Party Like Its 2019

The following is the first theorem in Ramsey Theory:

If there are 6 people at a party, either 3 know each other or 3 do not know each other.

We state this in terms of colorings of edges of graphs.

For all 2-coloring of the edges of K_6 there is a mono K_3 .

Proof of First Theorem: Whiteboard

Let COL be a 2-coloring of the edges of K_6 .

Proof of First Theorem: Whiteboard

Let COL be a 2-coloring of the edges of K_6 .

Let $\deg_R(v)$ be the **red degree** of v .

Let $\deg_B(v)$ be the **blue degree** of v .

Proof of First Theorem: Whiteboard

Let COL be a 2-coloring of the edges of K_6 .

Let $\deg_R(v)$ be the **red degree** of v .

Let $\deg_B(v)$ be the **blue degree** of v .

Now goto White Board.

Proof of First Theorem: In Text

Claim For all v either $\deg_R(v) \geq 3$ OR $\deg_B(v) \geq 3$.

Proof of First Theorem: In Text

Claim For all v either $\deg_R(v) \geq 3$ OR $\deg_B(v) \geq 3$.

Proof If not then $\deg_R(v) \leq 2$ AND $\deg_B(v) \leq 2$, so $\deg(v) \leq 4$.
But all vertices have degree 5.

Proof of K_6 Two Triangles Theorem

Theorem For all 2-cols of edges of K_6 there are 2 mono K_3 's

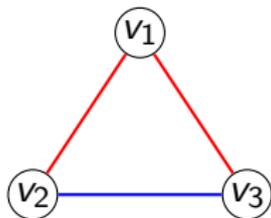

Proof Let COL be a 2-coloring of the edges of K_6 .

Let R , B , M , be the SET of **RED**, **BLUE**, and **MIXED** triangles.

$$|R| + |B| + |M| = \binom{6}{3} = 20.$$

We show that $|M| \leq 18$, so $|R| + |B| \geq 2$.

A Mixed Triangle Has a Vertex Such That

- ▶ (v_2, v_1) is red, (v_2, v_3) is blue. View this as $(v_2, \{v_1, v_3\})$.
- ▶ (v_3, v_1) is red, (v_3, v_2) is blue. View this as $(v_3, \{v_1, v_2\})$.
