

# CMSC 634

## Assignment 2

Due: start of class on September 23rd.

Find URLs for the full text of the following papers. If you cannot find the full text online, but you can find it in a library on campus, please list the library name and call number. If you cannot find the full text anywhere, find a link for the abstract and a current email address for the author.

Please do not bother our reference librarians or anyone else. The last thing they need is 25 students asking for references they don't actually need.

1. Burgess, Y. and Trinidad, S. "Young children and computers: Debating the issues."
2. Kato, H. and Suzuki, H. "Interaction-level support for collaborative learning: AlgoBlock – an open programming language."
3. Scheingold, K. "The microcomputer as a symbolic medium."
4. Char, Cynthia. "Computer graphic feltboards: New software approaches for young children's mathematical exploration."
