

Instruction

Comparisons

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.

# Comparisons

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.

# Comparisons

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.

# Comparisons

$$\frac{n}{5}10 = 2n$$

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.
- Within each column move the small elements in the top, large elements in the bottom, and median to the middle.

# Comparisons

$$\frac{n}{5}10 = 2n$$

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.
- Within each column move the small elements in the top, large elements in the bottom, and median to the middle.
- Find the median of medians.

# Comparisons

$$\frac{n}{5}10 = 2n$$

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.
- Within each column move the small elements in the top, large elements in the bottom, and median to the middle.
- Find the median of medians.

# Comparisons

$$\frac{n}{5}10 = 2n$$

$$T\left(\frac{n}{5}\right)$$

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.
- Within each column move the small elements in the top, large elements in the bottom, and median to the middle.
- Find the median of medians.
- Move the column(s) with small medians to the left, large medians to the right, and the median of medians to the middle.

# Comparisons

$$\frac{n}{5}10 = 2n$$

$$T\left(\frac{n}{5}\right)$$

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.
- Within each column move the small elements in the top, large elements in the bottom, and median to the middle.
- Find the median of medians.
- Move the column(s) with small medians to the left, large medians to the right, and the median of medians to the middle.
- Partition using median of medians as pivot.

# Comparisons

$$\frac{n}{5}10 = 2n$$

$$T\left(\frac{n}{5}\right)$$

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.
- Within each column move the small elements in the top, large elements in the bottom, and median to the middle.
- Find the median of medians.
- Move the column(s) with small medians to the left, large medians to the right, and the median of medians to the middle.
- Partition using median of medians as pivot.

# Comparisons

$$\frac{n}{5}10 = 2n$$

$$T\left(\frac{n}{5}\right)$$

$$n - 1$$

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.
- Within each column move the small elements in the top, large elements in the bottom, and median to the middle.
- Find the median of medians.
- Move the column(s) with small medians to the left, large medians to the right, and the median of medians to the middle.
- Partition using median of medians as pivot.
- Recursively call algorithm on proper side.

# Comparisons

$$\frac{n}{5}10 = 2n$$

$$T\left(\frac{n}{5}\right)$$

$$n - 1$$

# Instruction

- Put the elements into a  $5 \times \frac{n}{5}$  grid.
- Find the median of each column.
- Within each column move the small elements in the top, large elements in the bottom, and median to the middle.
- Find the median of medians.
- Move the column(s) with small medians to the left, large medians to the right, and the median of medians to the middle.
- Partition using median of medians as pivot.
- Recursively call algorithm on proper side.

# Comparisons

$$\frac{n}{5}10 = 2n$$

$$T\left(\frac{n}{5}\right)$$

$$n - 1$$

$$T\left(\frac{7n}{10}\right)$$
