CMSC436: Programming Handheld Systems

The Android Platform

The Android Platform

A software stack for mobile devices:

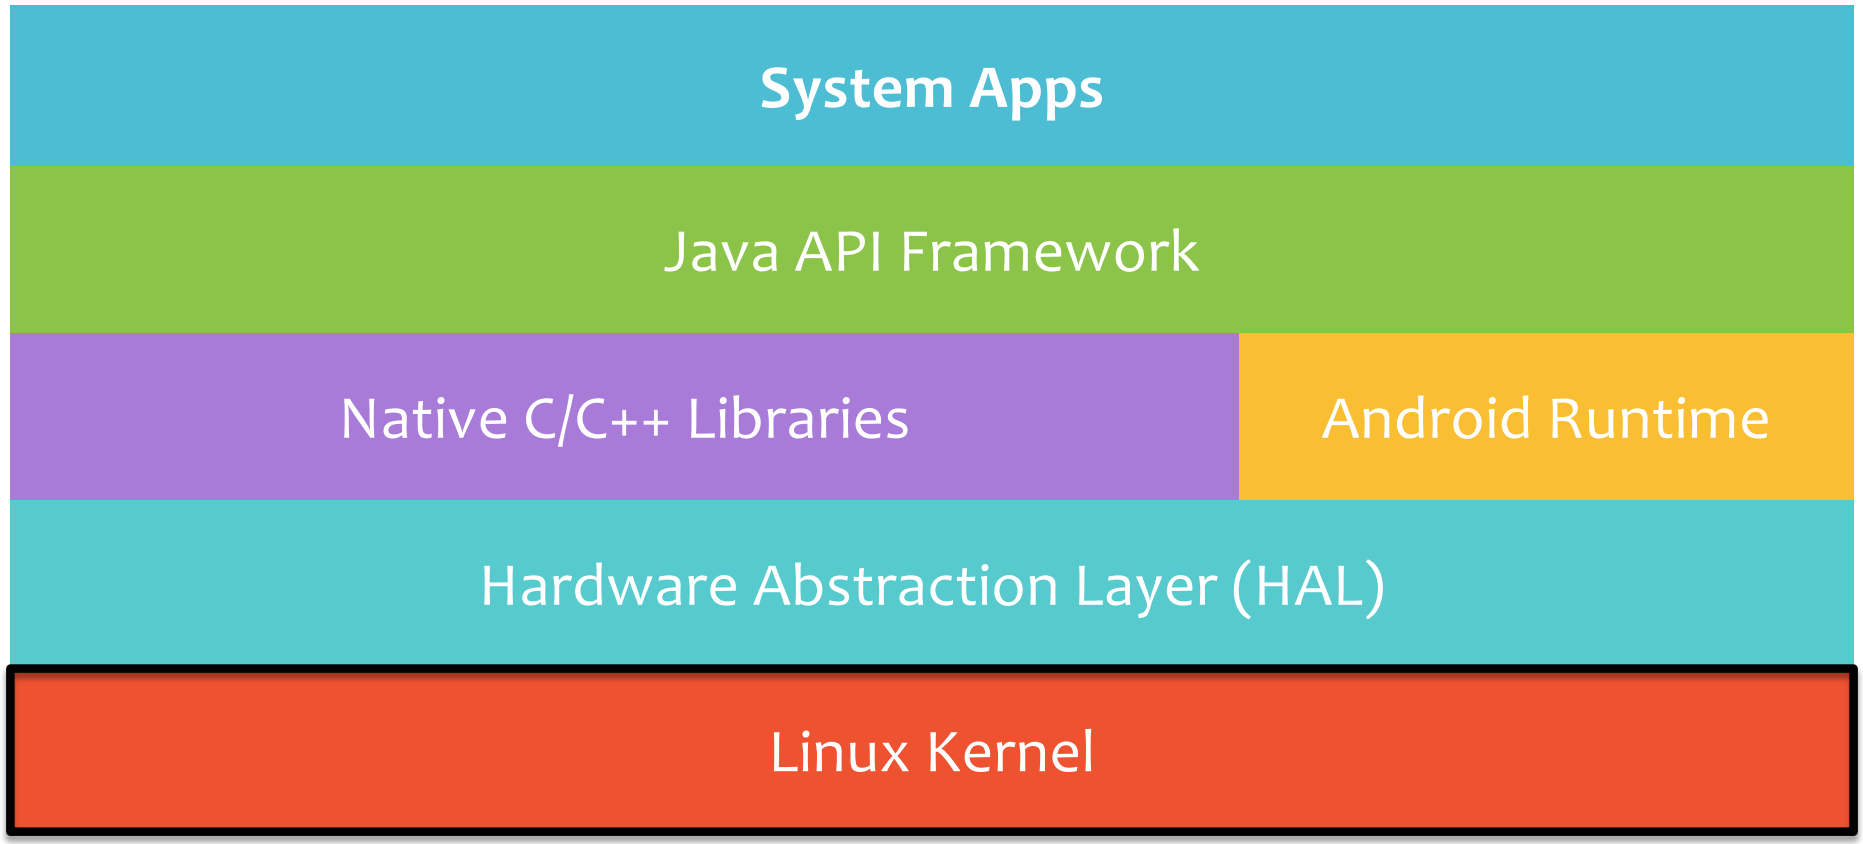
- OS kernel and interfaces, system libraries, frameworks & key apps

Android SDK for creating apps

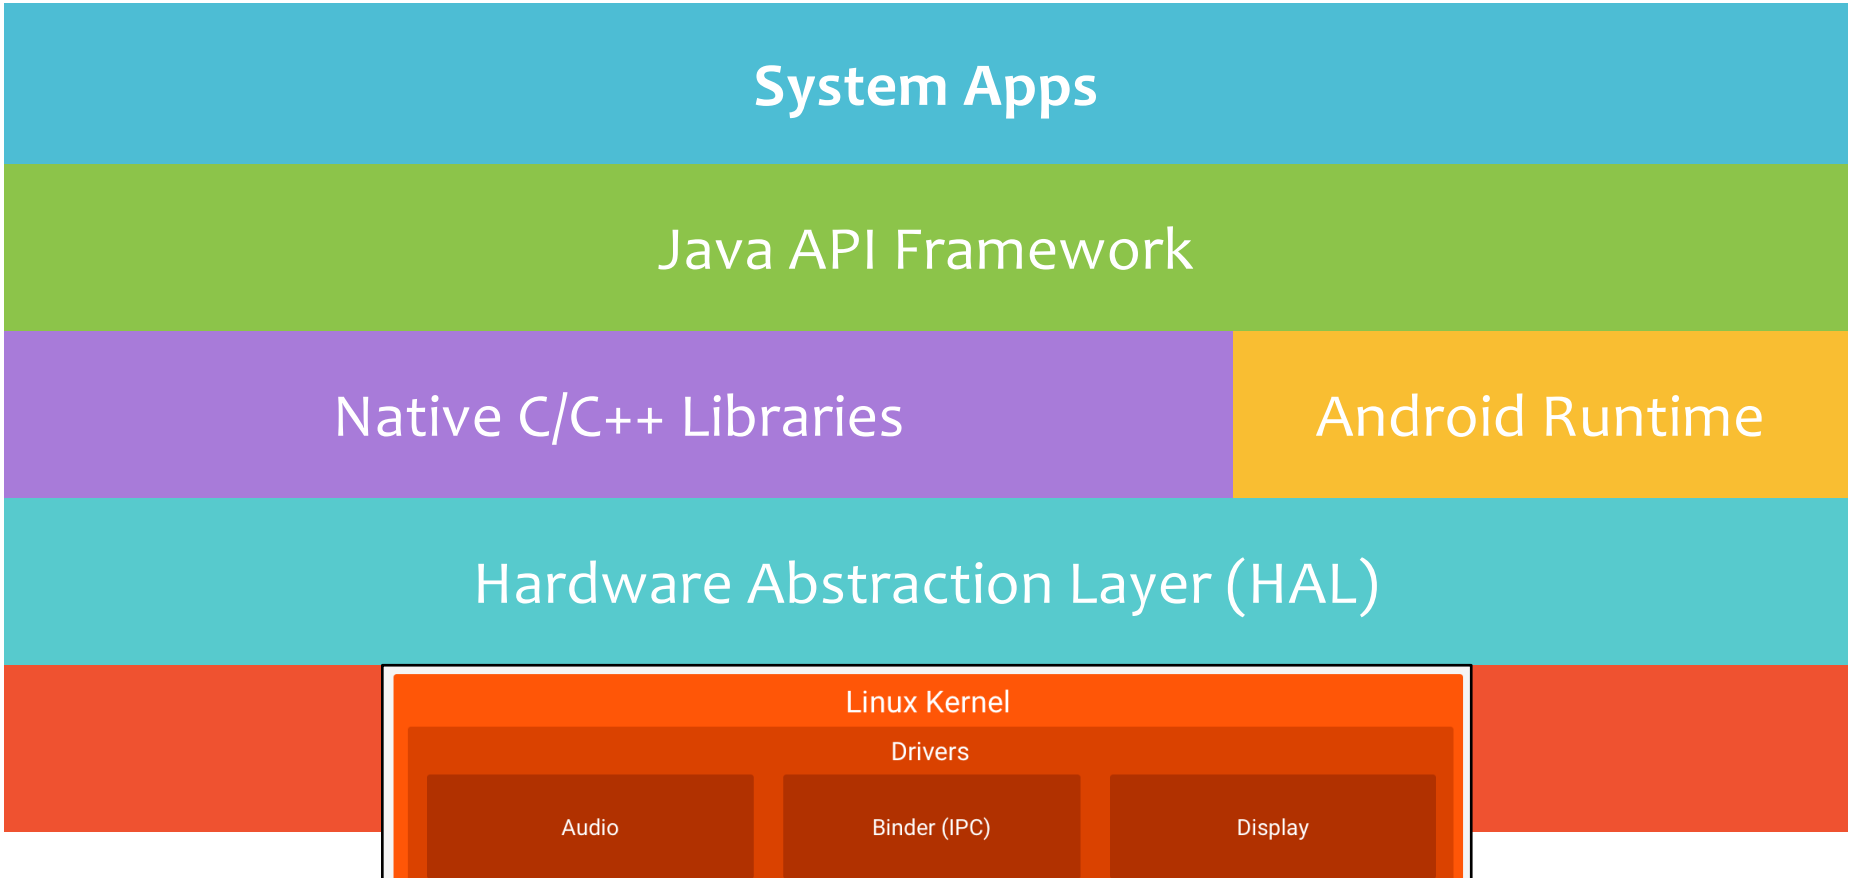
- Libraries & development tools
- Lots of documentation. Start browsing today!

See: http://developer.android.com/training

The Android Architecture



The Android Architecture



Linux Kernel – Standard Services

Security

Memory & process management

File & network I/O

Device drivers

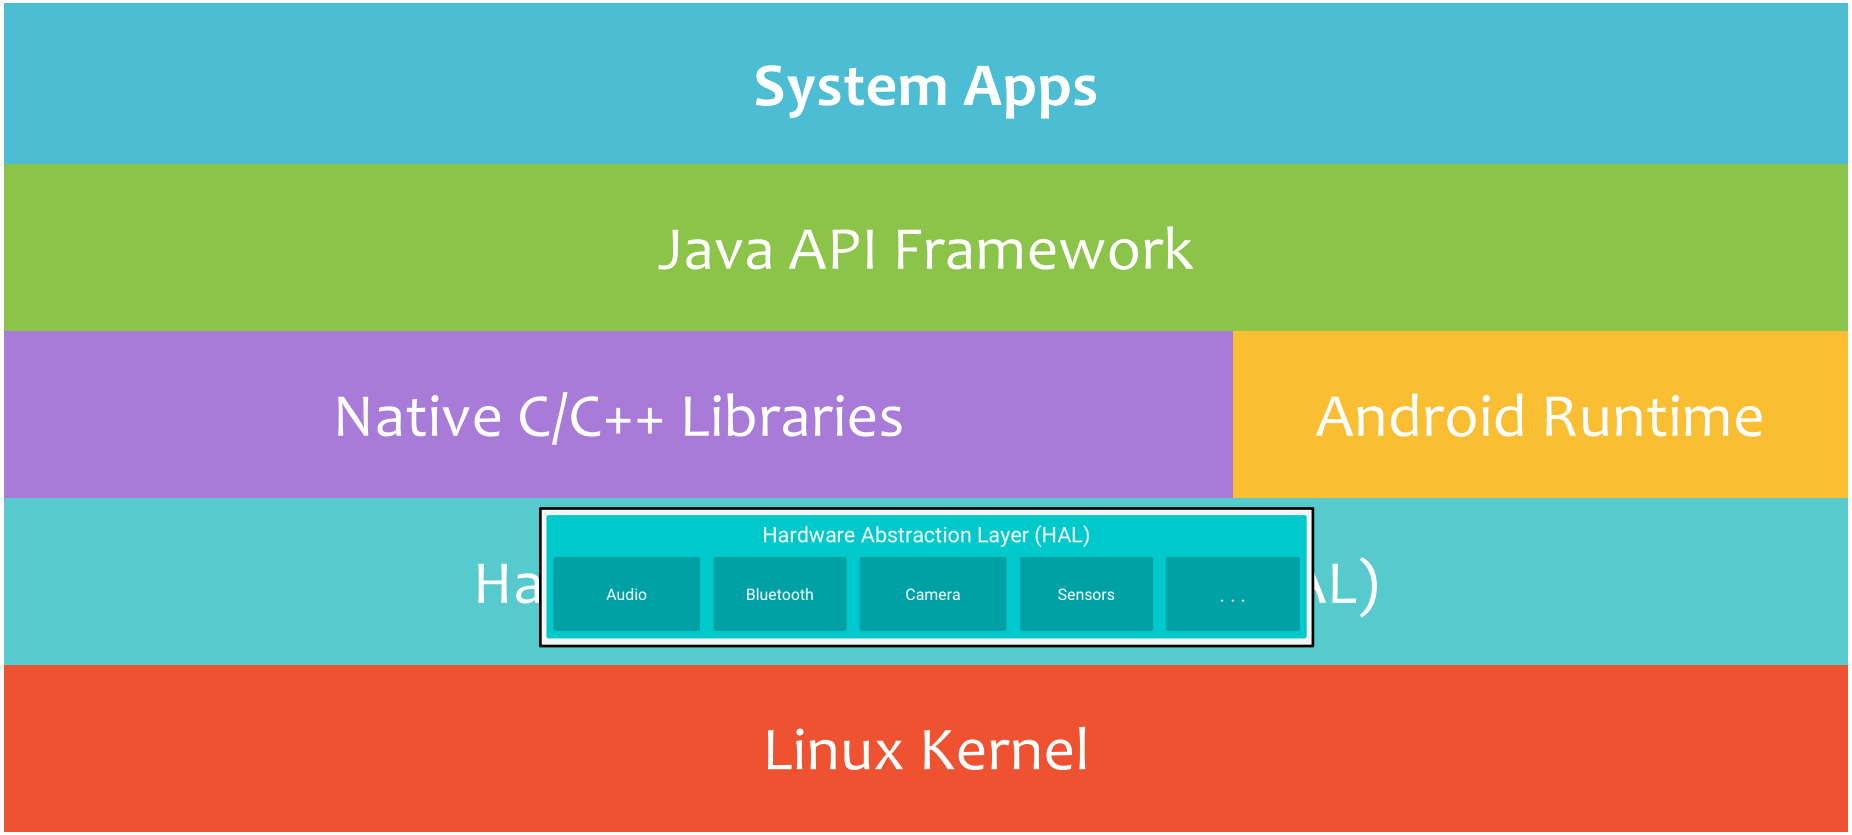
Linux Kernel - Android-Specific

Power management

Low memory killer

Interprocess communication (IPC)

The Android Architecture



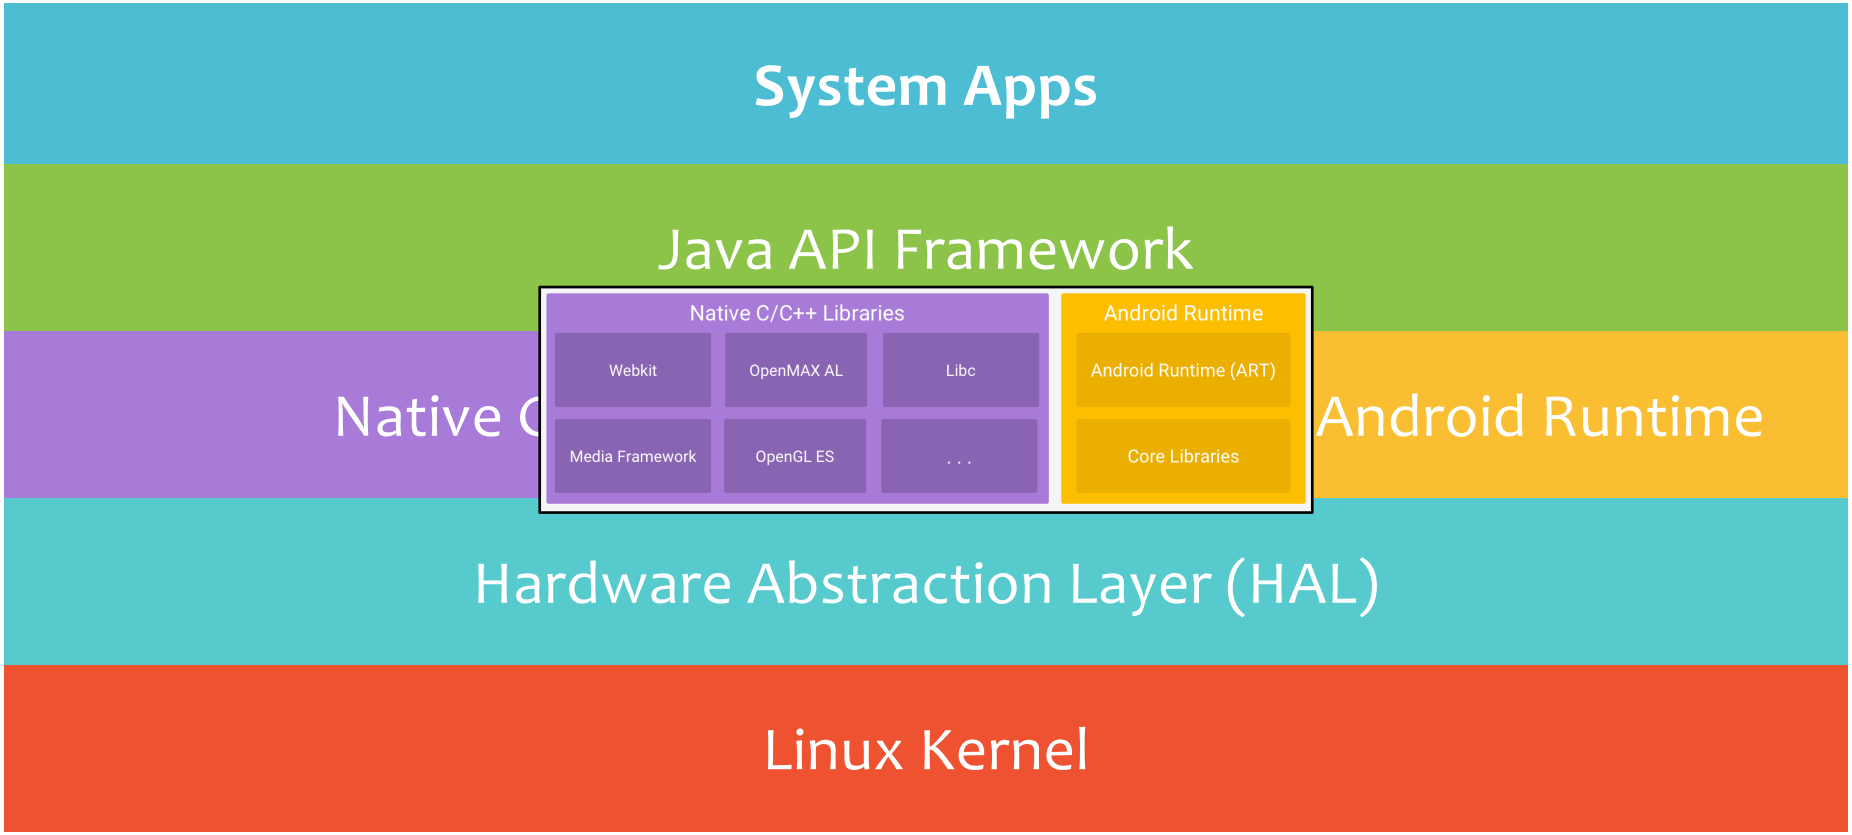
Hardware Abstraction Layer (HAL)

Provides standard interfaces between Java API framework and device hardware

Defines and interface for various hardware classes, such as Camera, Audio, Graphics, etc.

Android loads library modules for hardware components on demand

The Android Architecture



Libraries

Bionic libc

Surface Manager

Media Framework

FreeType

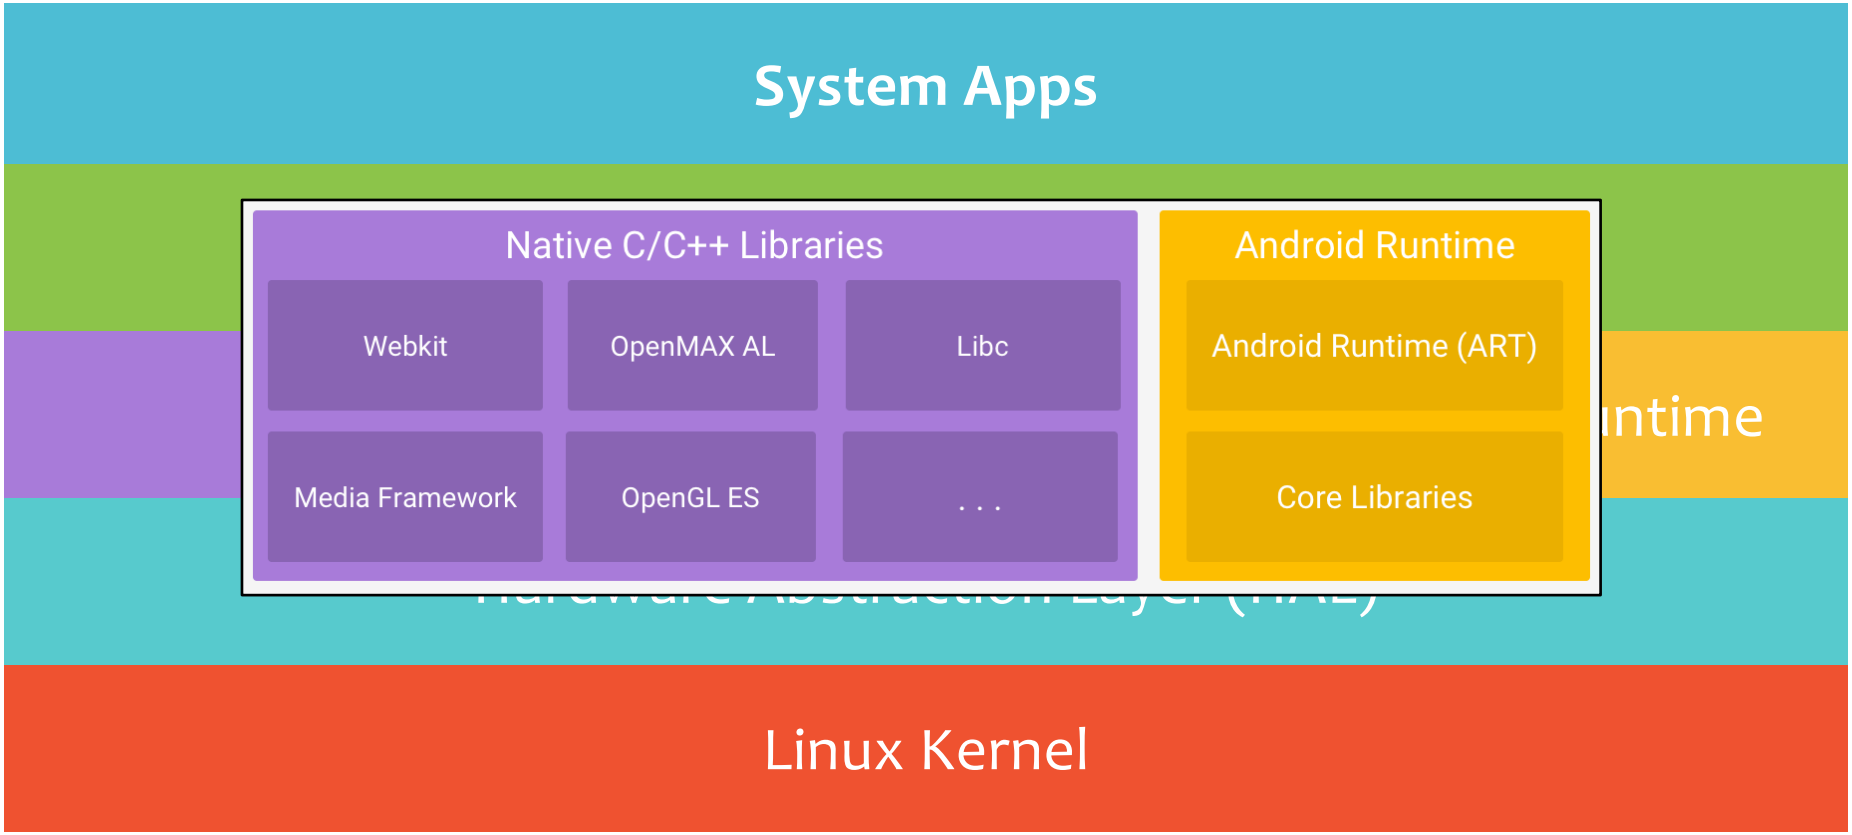
Webkit

OpenGL

SQLite

SSL

The Android Architecture



Android Runtime

- Two main components
  - Core Java libraries with some Java 8 feature support
  - Android Runtime (ART)

Core Java Libraries

Basic java classes -- java.*, javax.*

App lifecycle -- android.*

Internet/Web services -- org. *

Unit testing -- junit.*

Java 8 support

Android does not support all Java 8 language features

Some supported features (in API level 24 or higher)

- Lambda expressions
- Method references
- java.util.function and java.util.stream

See:

- https://developer.android.com/studio/write/java8-support

Android Runtime (ART)

Since Android 5.0, apps are executed in a managed runtime environment

On older platforms, apps run in the Dalvik Virtual Machine

ART Design Goals

- Designed for resource-constrained environments
  - Slower CPU
  - Less RAM
  - Limited battery life

Typical Workflow

App written in Java

Compiled to Java bytecode files

Tool chain converts java bytecode files to a single dex-formatted bytecode file

Virtual machine executes bytecode file

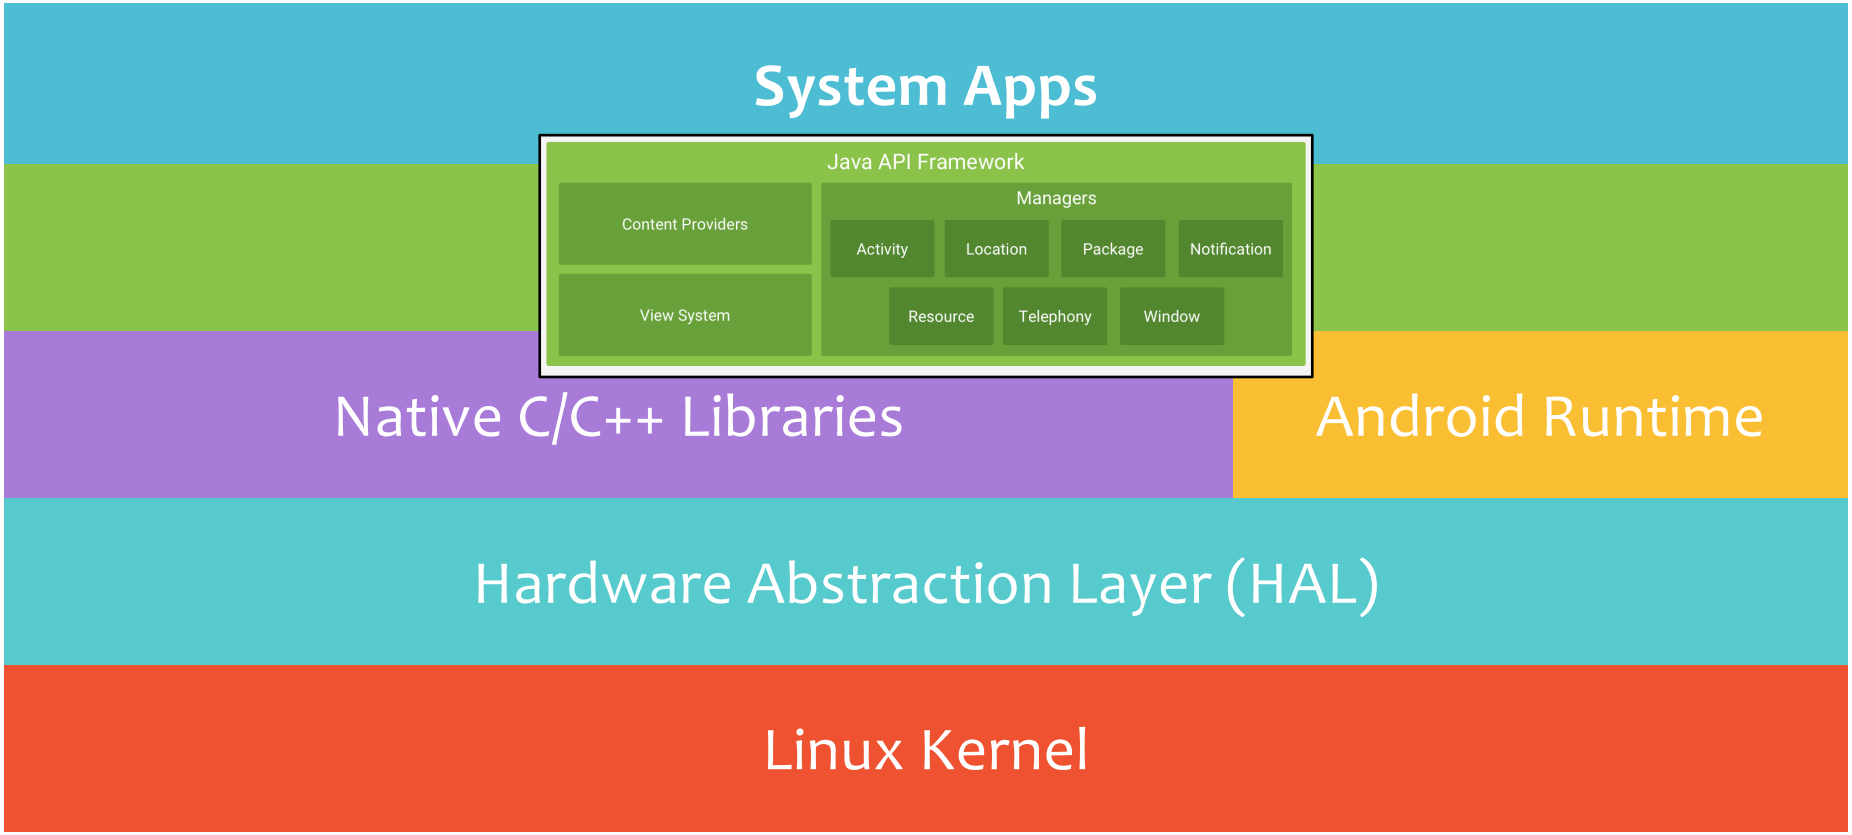
ART

Compiles dex bytecode to native binary for improved runtime performance

Applies system-dependent optimizations at installation time, runtime, and in background

Results in faster execution at cost of larger executable

The Android Architecture



Package Manager

Keeps track of app packages on device

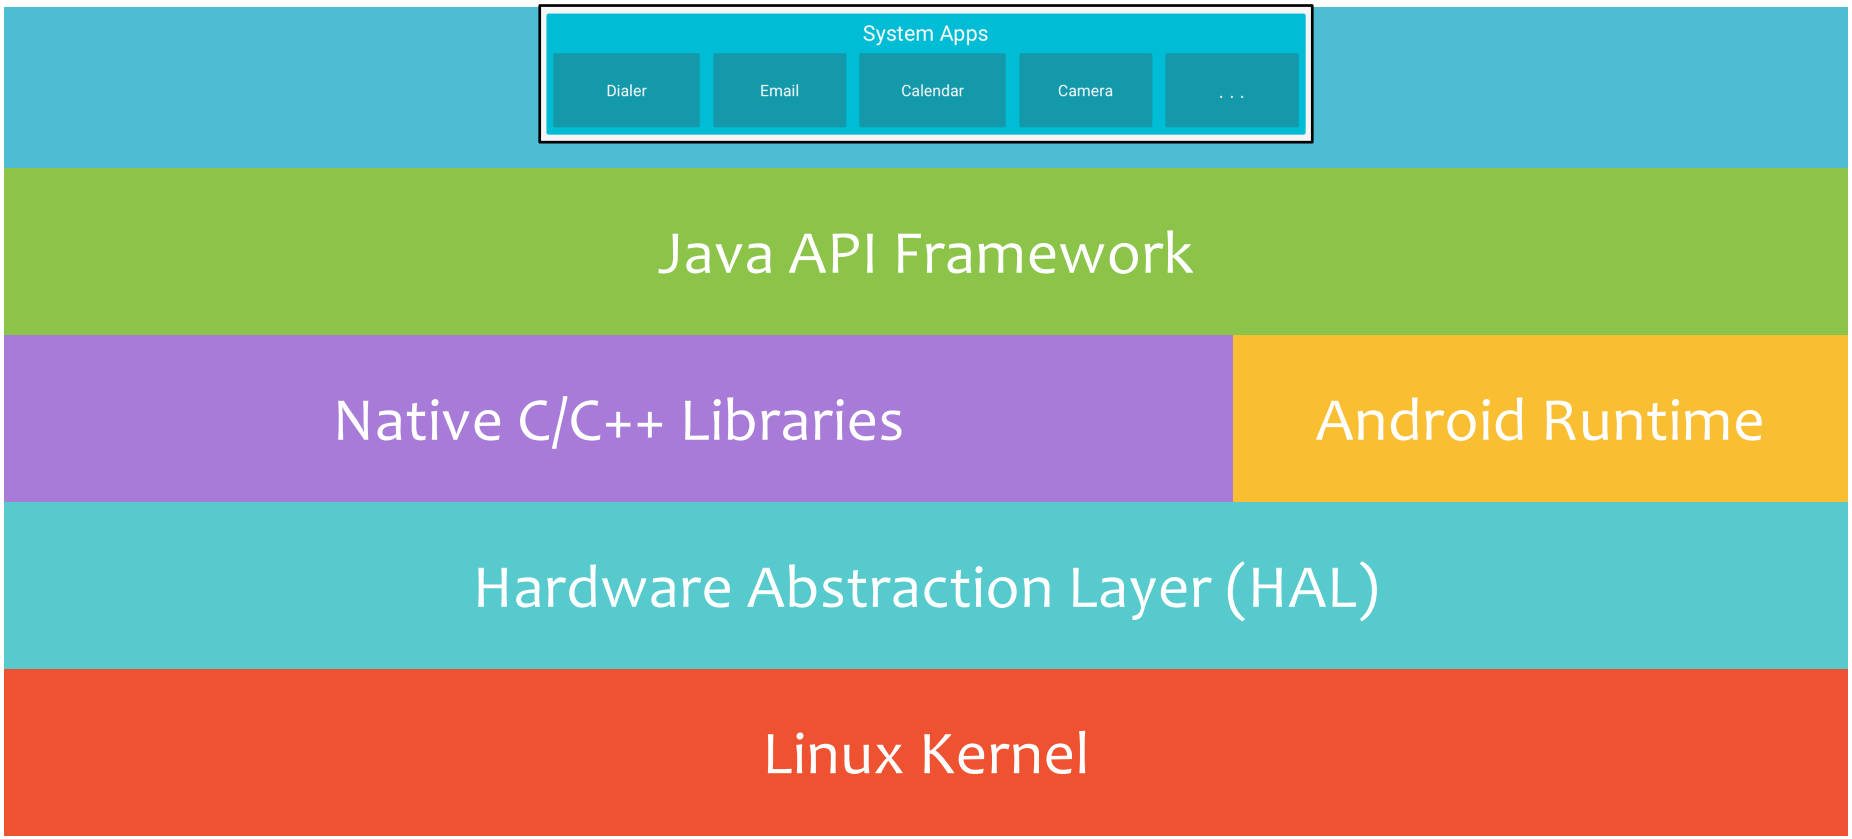
The Android Architecture



Applications

Standard apps include:

- Home – main screen
- Contacts – contacts database
- Phone – dial phone numbers
- Browser – view web pages
- Email reader –compose & read email messages

Applications

Nothing special about these apps

You can substitute your own or 3rd party app for any of them
