

CMSC 351

Introduction to Algorithms

Fall 2019

Administration

- General Administration:
Andrew Witten <awitten1@terpmail.umd.edu>
- Exam Scheduling:
Jamie Matthews <jamie@cs.umd.edu>

Administration (continued)

- Webpage

- ▶ Get homework assignments
- ▶ Syllabus
- ▶ Other documents

- Piazza

- ▶ Ask questions
 - ★ Do **not** post solutions.
 - ★ Do **not** ask if your answer or approach is correct.
- ▶ Discuss issues
- ▶ Public versus Private

- ELMS

- ▶ Get homework solutions
- ▶ See final grades

- Gradescope

- ▶ Hand in homework
- ▶ See graded homeworks and exams

Administration (continued)

- Textbook (bookstore/on reserve at McKeldin Library)
 - ▶ Cormen, Leiserson, Rivest, and Stein, *Introduction to Algorithms* (3rd ed., 2009). MIT Press. (Any edition is fine.)
- Class attendance
 - ▶ You are responsible for what is said in class.
 - ▶ Laptops and other devices: **Do not share during class.**
 - ▶ Lectures will be posted (mostly).
- Office hours
- Exams
 - ▶ Two evening midterms: **7:00-9:00pm.**
 - ★ Thursday, October 17th
 - ★ Thursday, November 14th
 - ▶ Final exam: **4:00-6:00pm.**
 - ★ Friday, December 13th

Administration (continued)

- Homework

- ▶ Three types
 - ★ Regular: typically due each Friday. (1% each)
 - ★ NP-completeness: typically due every other Wednesday. (1/2% each)
 - ★ Programming project (likely). (4%)
- ▶ Must be in PDF.
- ▶ Must be easy to read (your responsibility).
- ▶ Late date: 25% off your actual grade.
 - ★ One get-out-of-jail-free card for each type.
- ▶ Your neighbor should understand your answers.
- ▶ Study groups.
- ▶ Must write up homework solutions yourself.
 - ★ State who is in your study group at top of homework.
 - ★ State what outside resources you used to solve each problem.
- ▶ Do problems from book (and other books).

- Grading

Topics (tentative)

- Introduction, Ch. 1,2
- Quadratic sorting algorithms
- Mergesort, Ch. 2
- Summations, Appendix A
- Recurrences, Ch. 4
- Heapsort, Ch. 6
- Quicksort, Ch. 7
- Sorting in Linear Time, Ch. 8
- Medians and Order Statistics, Ch. 9
- Graphs and Trees, Appendix B
- Minimum Spanning Trees, Ch. 23
- Shortest Paths: Dijkstra's algorithm, Ch. 24.3
- Introduction to NP-completeness, Ch. 34

Why learn this material?

Why learn this material?

- Algorithms are everywhere in Computer Science (and elsewhere).

Why learn this material?

- Algorithms are everywhere in Computer Science (and elsewhere).
- Useful for later courses.

Why learn this material?

- Algorithms are everywhere in Computer Science (and elsewhere).
- Useful for later courses.
- Useful for computer programming.
 “Micro-algorithms”

Why learn this material?

- Algorithms are everywhere in Computer Science (and elsewhere).
- Useful for later courses.
- Useful for computer programming.
 “Micro-algorithms”
- Useful to get a job.

Why learn this material?

- Algorithms are everywhere in Computer Science (and elsewhere).
- Useful for later courses.
- Useful for computer programming.
 “Micro-algorithms”
- Useful to get a job.
- Useful on the job.

What is an algorithm?

Definition

An *algorithm* is a finite list of step-by-step instructions for solving a problem.

Efficiency

- Time
- Space

Example

Tournament assignment. (Think about at home.)

Good Algorithms Are Critical

Example

Two sorting algorithms:

- Slow algorithm (bubble sort): $4n^2$ instructions
- Fast algorithm (merge sort): $80n \lg n$ instructions

Two computers:

- Fast computer: 10 billion instructions/second
- Slow computer: 10 million instructions/second

Time to sort 10 million numbers:

Good Algorithms Are Critical

Example

Two sorting algorithms:

- Slow algorithm (bubble sort): $4n^2$ instructions
- Fast algorithm (merge sort): $80n \lg n$ instructions

Two computers:

- Fast computer: 10 billion instructions/second
- Slow computer: 10 million instructions/second

Time to sort 10 million numbers:

- Slow algorithm, fast computer: ≈ 11 hours

Good Algorithms Are Critical

Example

Two sorting algorithms:

- Slow algorithm (bubble sort): $4n^2$ instructions
- Fast algorithm (merge sort): $80n \lg n$ instructions

Two computers:

- Fast computer: 10 billion instructions/second
- Slow computer: 10 million instructions/second

Time to sort 10 million numbers:

- Slow algorithm, fast computer: ≈ 11 hours
- Fast algorithm, slow computer: $\approx \frac{1}{2}$ hour

Calculate Time

Example

- Slow algorithm, fast computer:

$$\frac{4 \cdot (10^7)^2 \text{ instructions}}{10^{10} \text{ instructions/second}} = 40000 \text{ secs} \approx 11 \text{ hrs}$$

- Fast algorithm, slow computer:

$$\frac{80 \cdot 10^7 \lg(10^7) \text{ instructions}}{10^7 \text{ instructions/second}} \approx 1860 \text{ secs} \approx 31 \text{ mins}$$

Calculate Time

Example

Other way around:

Calculate Time

Example

Other way around:

- Slow algorithm, slow computer: $\approx 1\frac{1}{4}$ years
- Fast algorithm, fast computer: ≈ 2 seconds

Calculate Time

Example

Other way around:

- Slow algorithm, slow computer: $\approx 1\frac{1}{4}$ years
- Fast algorithm, fast computer: ≈ 2 seconds

Both using fast computer:

Calculate Time
