CMSC436: Programming Handheld Systems

Android Development Environment

The Android Platform

A multi-layered software stack for building and running mobile applications

The Android Development Environment

Your workbench for writing Android applications

See:

<https://developer.android.com/studio/intro/>

Today's Topics

Downloading Android SDK

Using the Android Studio IDE

Using the Android emulator

Debugging Android applications

Other tools

Prerequisites

Supported Operating Systems:

Microsoft Windows 7/8/10 (32- or 64-bit)

Mac OS X 10.10 (Yosemite) up to 10.14 (Mojave)

GNOME or KDE desktop (tested on gLinux)

Chrome OS

General Prerequisites

4 GB RAM min, 8 GB RAM rec

2-4 GB+ for Android SDK, emulator system images, and caches

1280 x 800 min screen resolution

Getting Started

Download & install Android Studio

See: <https://developer.android.com/studio/>

Android Studio

Android platform

Android Studio IDE

Key development tools

System image for emulator

HelloWorld

```
package course.examples.helloworld
```

```
import android.app.Activity
```

```
import android.os.Bundle
```

```
class MainActivity : Activity() {
```

```
    override fun onCreate(savedInstanceState: Bundle?) {
```

```
        super.onCreate(savedInstanceState)
```

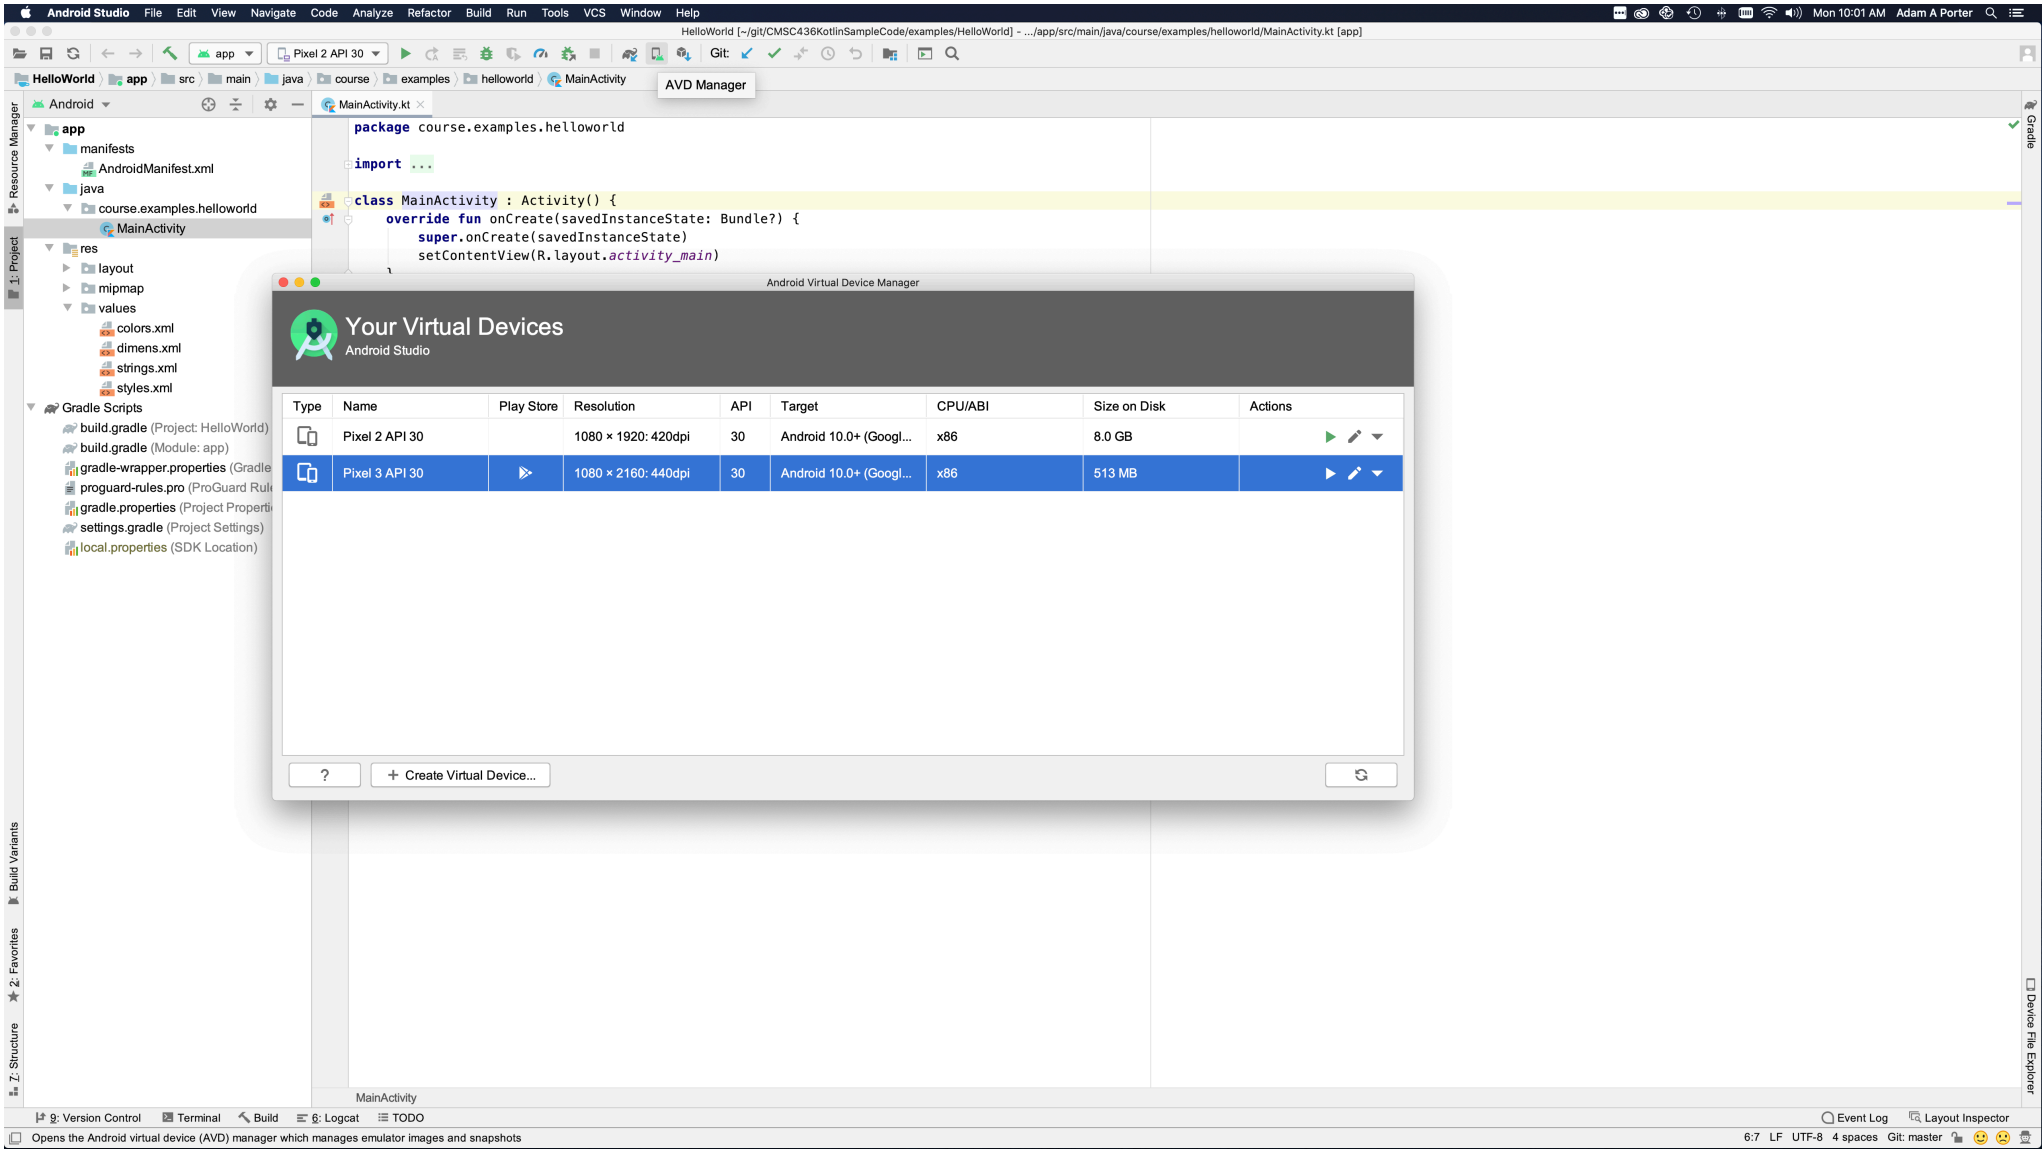

```
        setContentView(R.layout.activity_main)
```

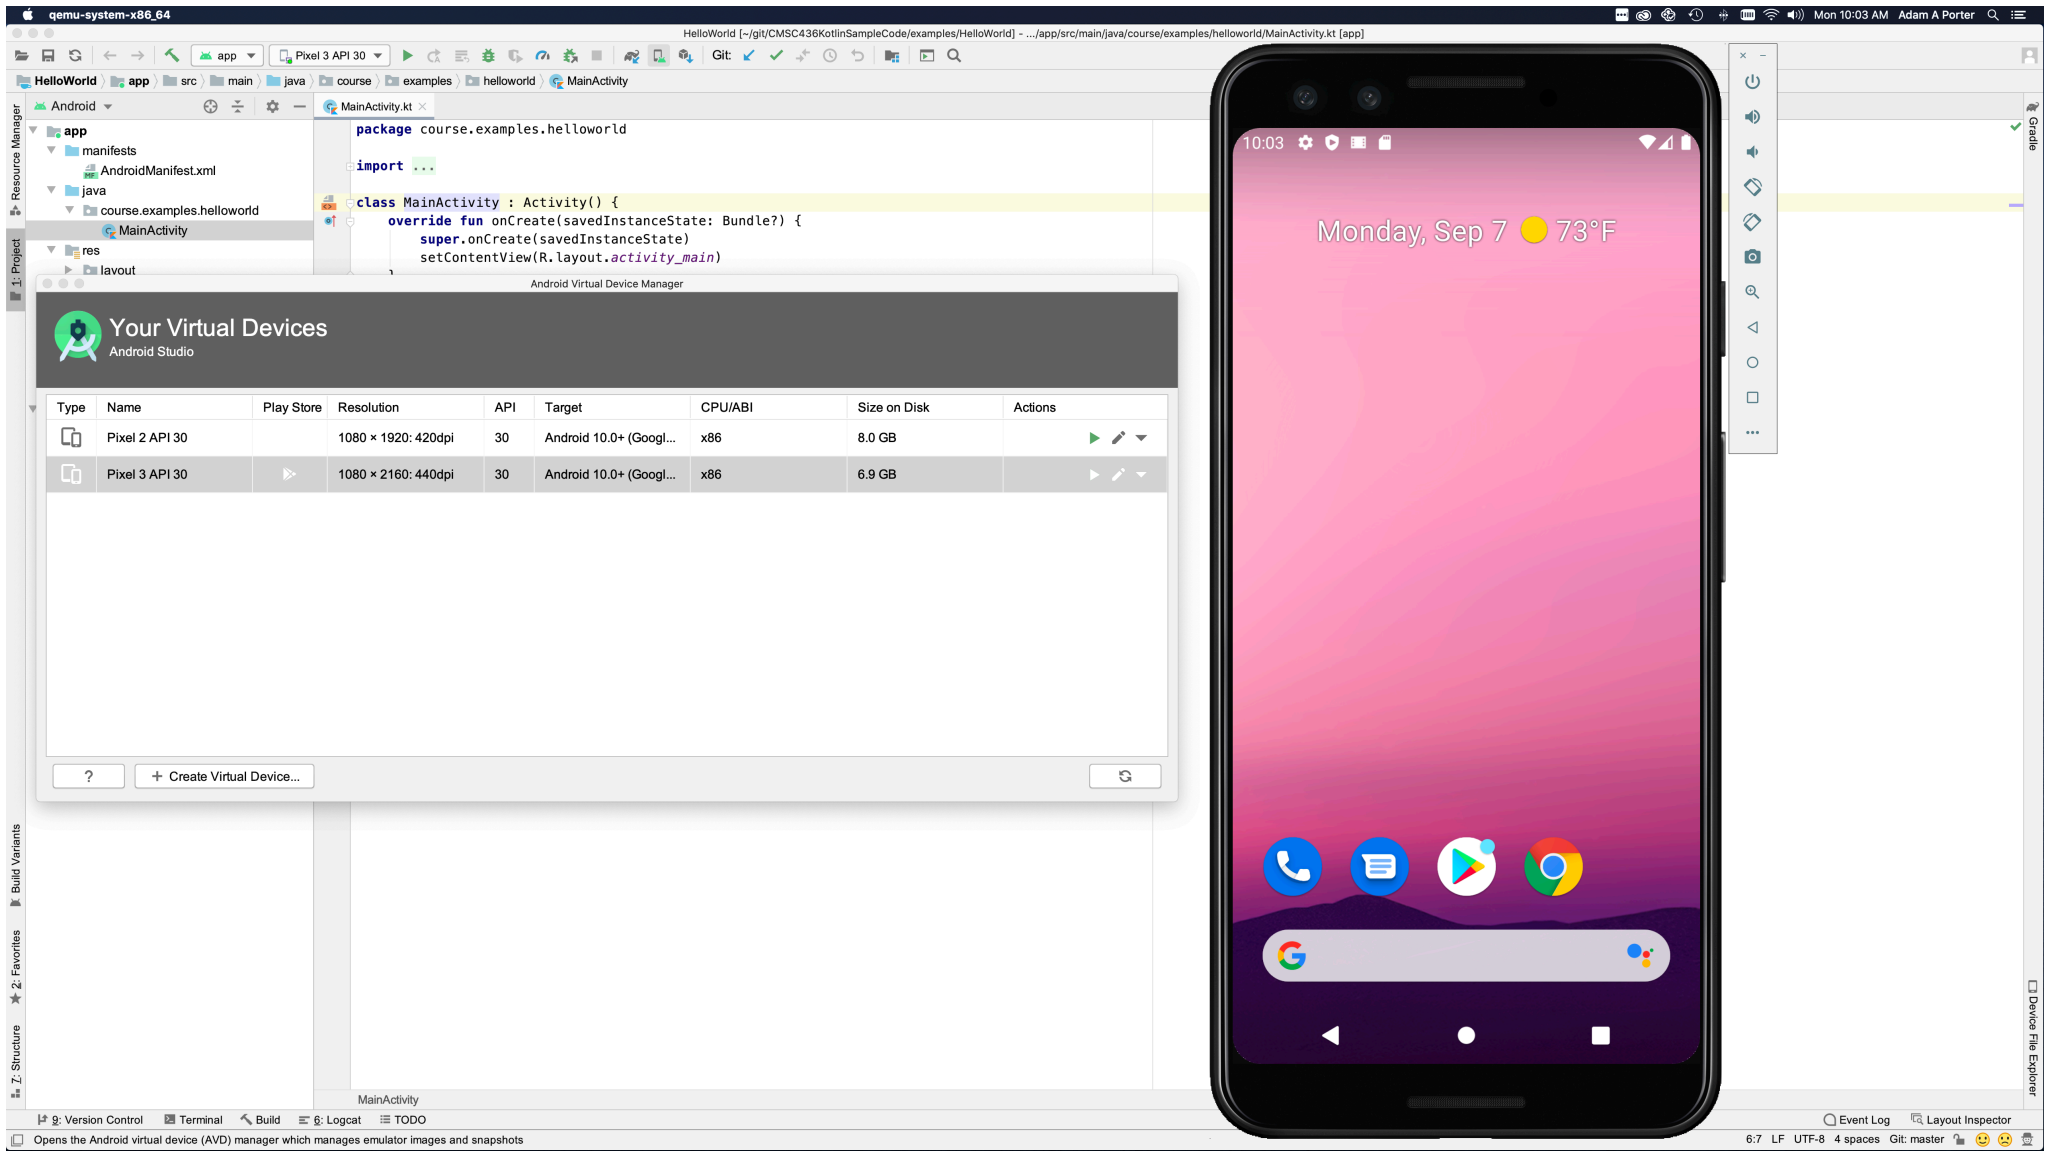

```
    }
```

```
}
```

The Android Emulator

Runs virtual devices

The Android Emulator

Pros

Doesn't require an actual phone

Hardware is reconfigurable

Changes are non-destructive

The Android Emulator

Cons

Slower than an actual device

Some features unavailable

e.g., no support for Bluetooth, USB connections, NFC, etc.

Performance / user experience can be misleading

Advanced Features

Can emulate many different device/user characteristics, such as:

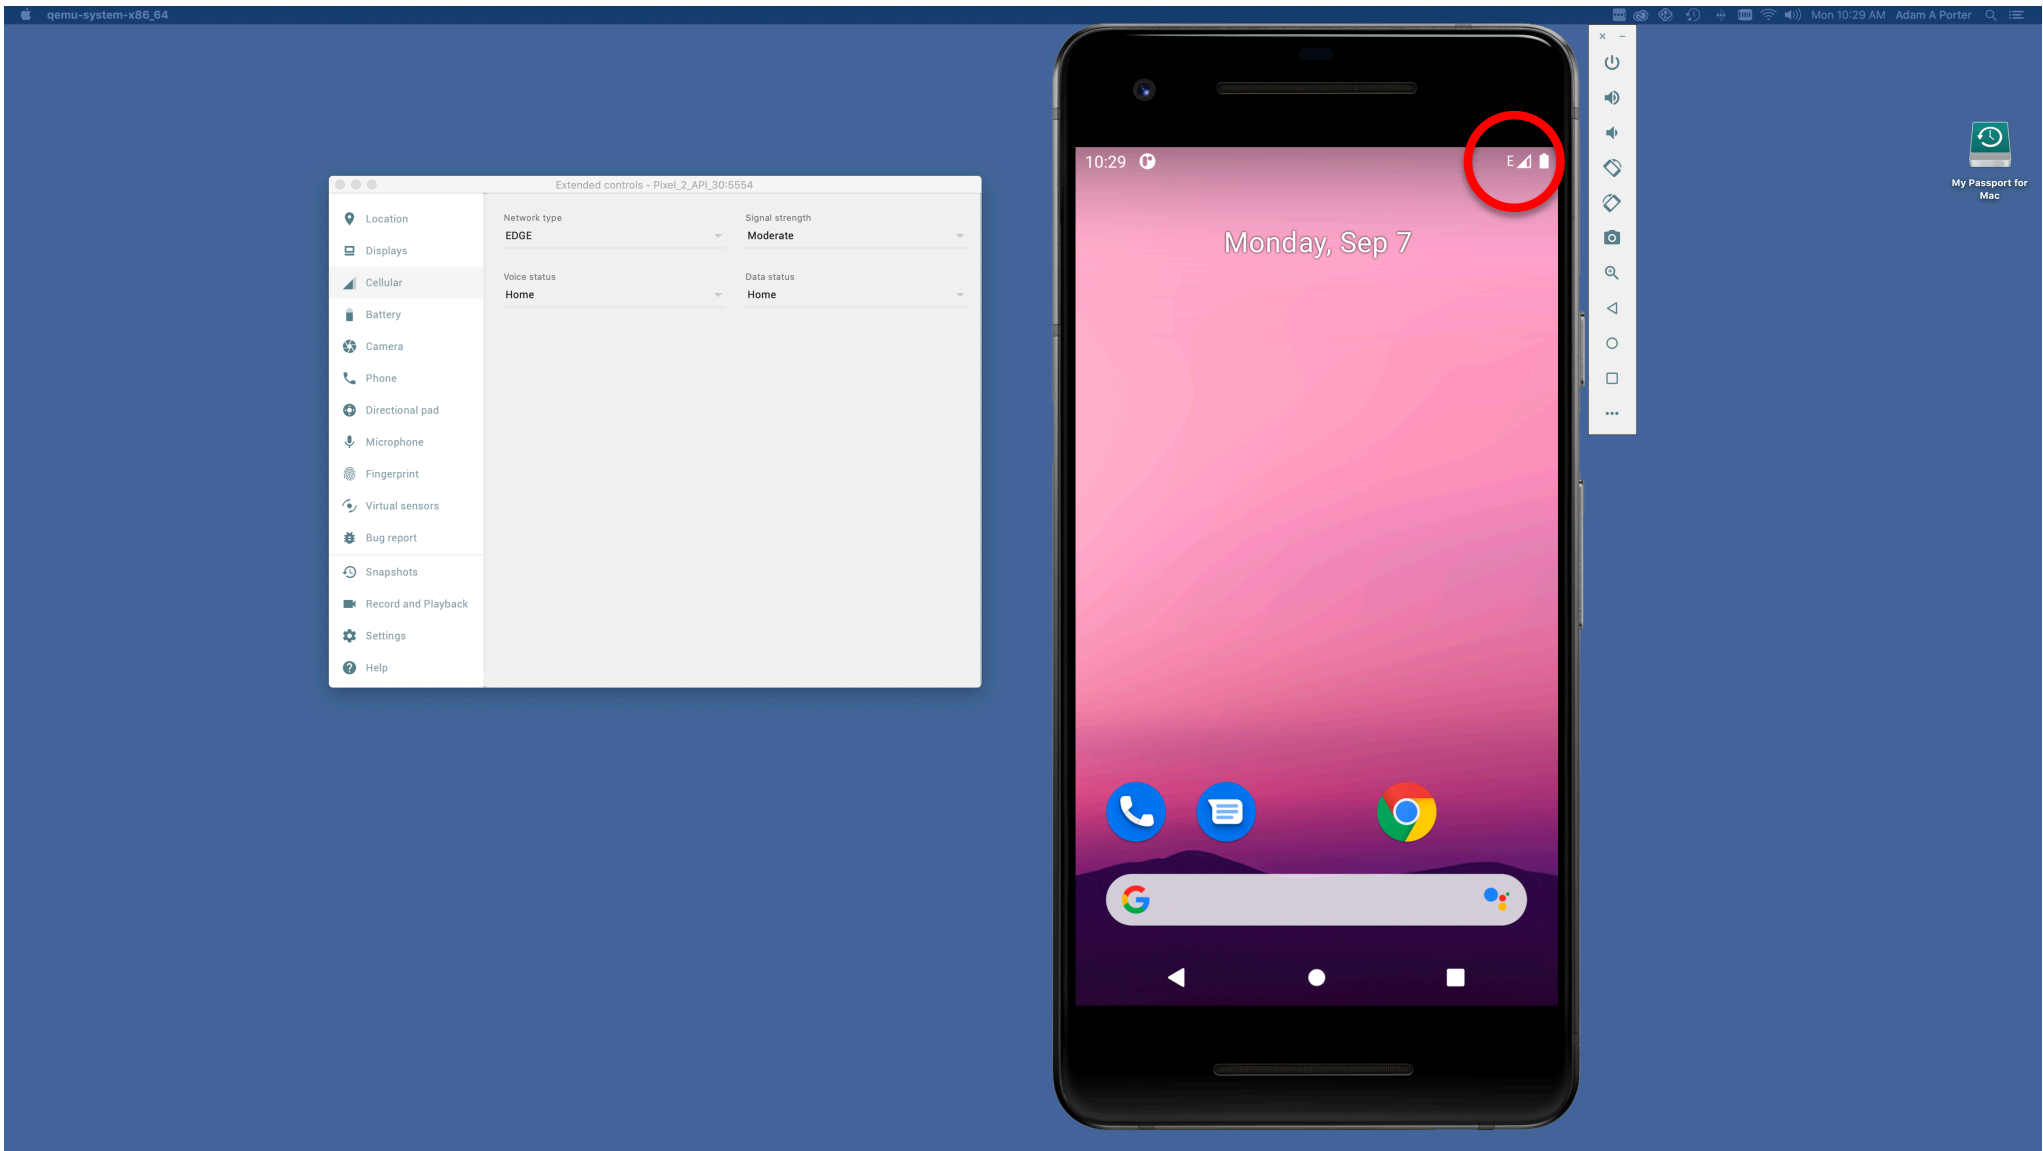

- Network speed/latencies

- Battery power

- Location coordinates

Advanced Features

Change network speeds

Extended controls - Pixel_2_API_30-5554

Location	Network type	Signal strength
Displays	EDGE	Moderate
Cellular	Voice status	Data status
Battery	Home	Home
Camera		
Phone		
Directional pad		
Microphone		
Fingerprint		
Virtual sensors		
Bug report		
Snapshots		
Record and Playback		
Settings		
Help		

Advanced Features

Emulate incoming phone calls & SMS messages

Extended controls - Pixel_2_API_30:5554

- Location
- Displays
- Cellular
- Battery
- Camera
- Phone
- Directional pad
- Microphone
- Fingerprint
- Virtual sensors
- Bug report
- Snapshots
- Record and Playback
- Settings
- Help

From (650) 555-1212

HOLD CALL END CALL

SMS message

Yum! Pie à la Android mode!

SEND MESSAGE

- Window control buttons (close, maximize, minimize)

Debugger

Tool for examining the internal state of a running application

TheAnswer

```
class TheAnswer : Activity() {
    companion object {
        private val answers = intArrayOf(42, -10, 0, 100, 1000)
        private const val answer = 42
        private const val TAG = "TheAnswer"
    }

    override fun onCreate(savedInstanceState: Bundle?) {
        // Required call through to Activity.onCreate()
        // Restore any saved instance state
        super.onCreate(savedInstanceState)

        // Set up the application's user interface (content view)
        setContentView(R.layout.answer_layout)
        val value = findAnswer()
```

```
    val output = if (value != null) answer.toString()
                  else getString(R.string.never_know_string)

    // Get a reference to a TextView in the content view
    val answerView = findViewById<TextView>(R.id.answer_view)
    // Set desired text in answerView TextView
    answerView.text = output
}
private fun findAnswer(): Int? {
    Log.d(TAG, "Entering findAnswer()")
    // Incorrect behavior
    return answers.firstOrNull { it == -answer }
    // Correct behavior
    // return answers.firstOrNull { it == answer }
}
}
```

Development Tools

Android Studio provides numerous tools for monitoring application behaviors

Example Tools

Device File Explorer

Logcat

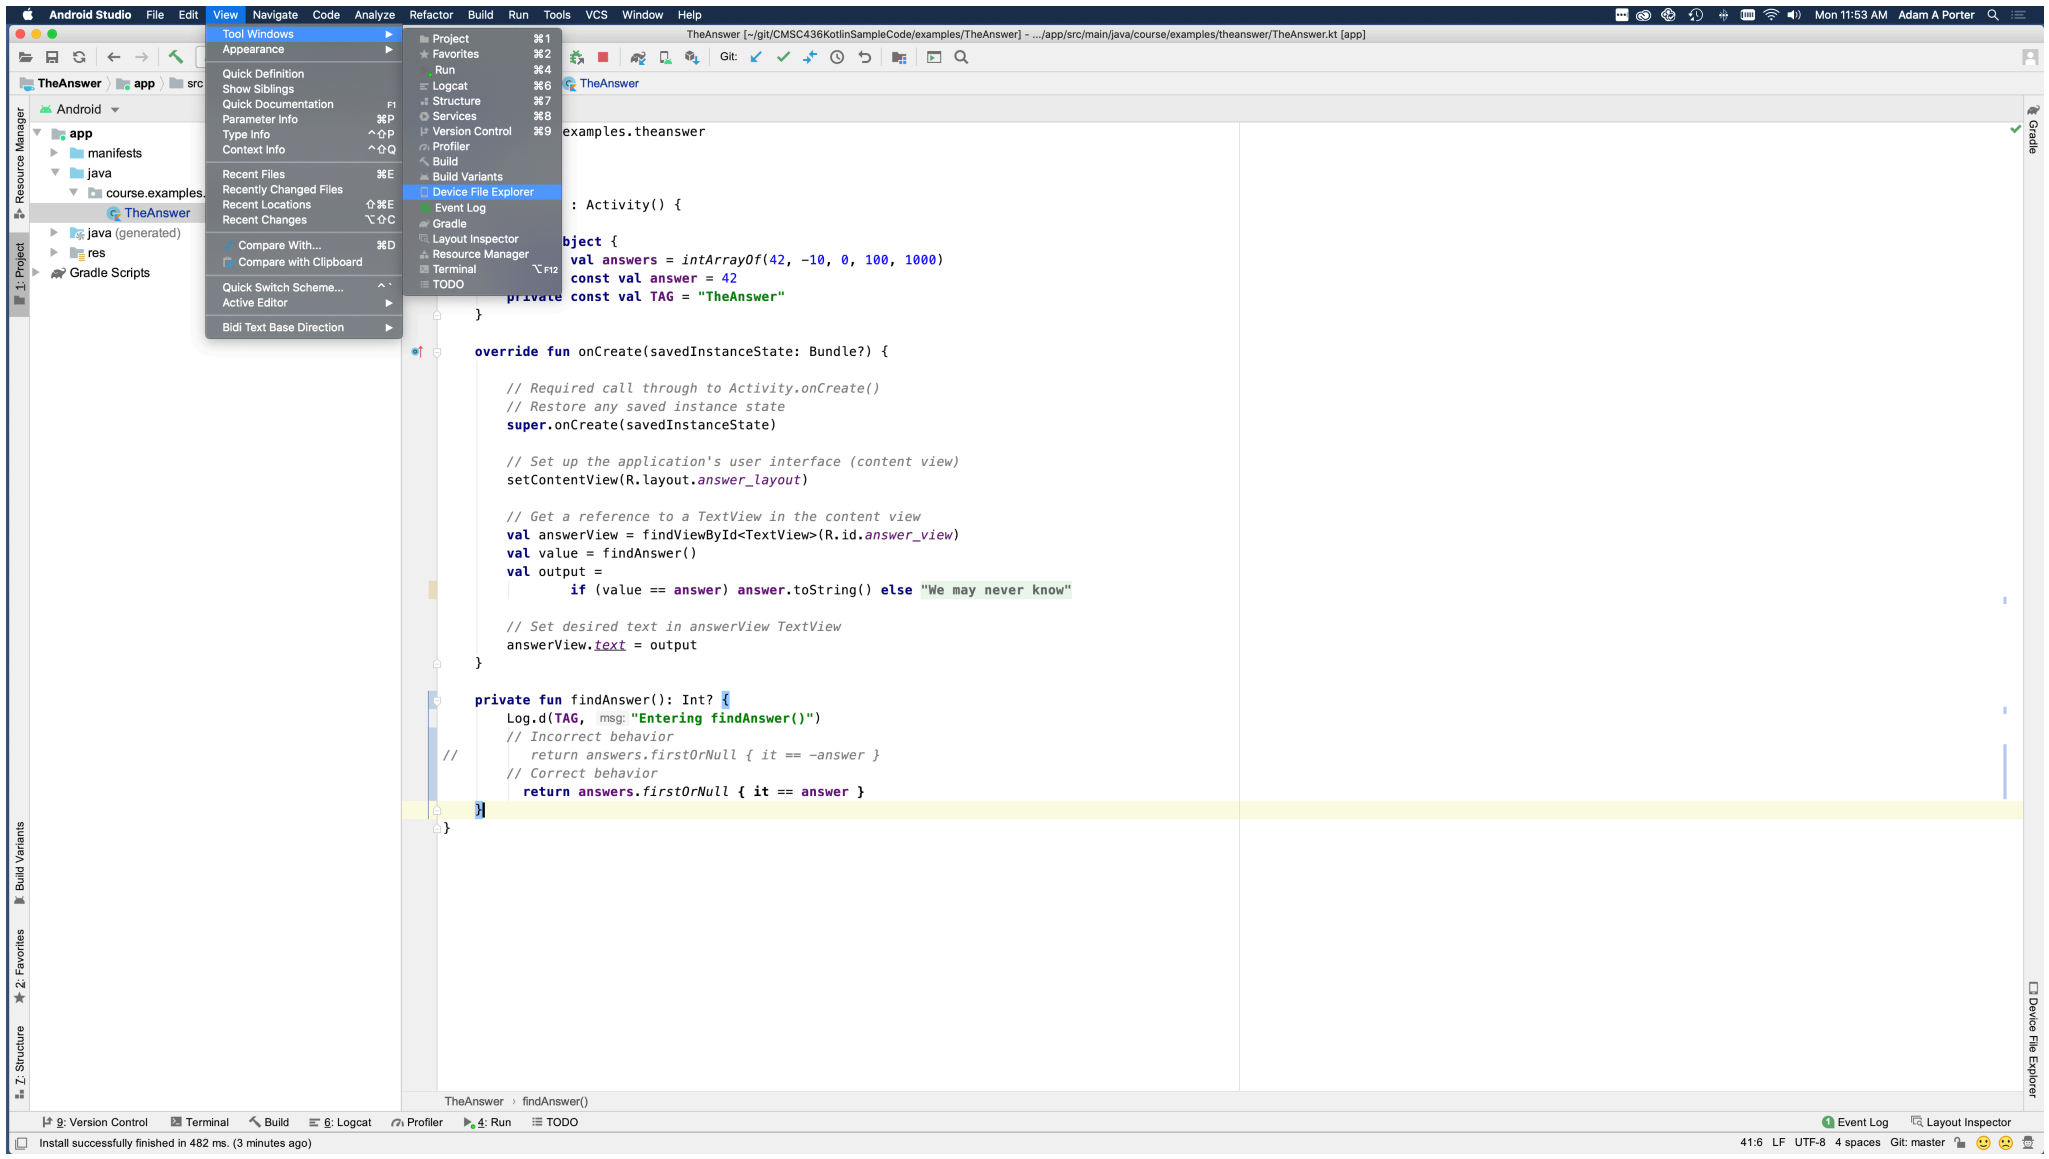

CPU Profiler

Layout Inspector

Device File Explorer

View, copy, and delete files on your device

Often used to examine and verify file creation and transfer

Android Studio interface showing a Kotlin project named 'TheAnswer'.

Code Editor:

```

package course.examples.theanswer

import ...

class TheAnswer : Activity() {

    companion object {
        private val answers = intArrayOf(42, -10, 0, 100, 1000)
        private const val answer = 42
        private const val TAG = "TheAnswer"
    }

    override fun onCreate(savedInstanceState: Bundle?) {

        // Required call through to Activity.onCreate()
        // Restore any saved instance state
        super.onCreate(savedInstanceState)

        // Set up the application's user interface (content view)
        setContentView(R.layout.answer_layout)

        // Get a reference to a TextView in the content view
        val answerView = findViewById<TextView>(R.id.answer_view)
        val value = findAnswer()
        val output =
            if (value == answer) answer.toString() else "We may never know"

        // Set desired text in answerView TextView
        answerView.text = output
    }

Logcat

Write and review log messages

Apps use Log class to write messages to log

Developer can search and filter log messages

Android Studio interface showing a Kotlin file named `TheAnswer.kt` in the `course.examples.theanswer` package. The code defines a `findAnswer()` function that returns an integer based on a list of answers.

```
super.onCreate(savedInstanceState)
// Set up the application's user interface (content view)
setContentView(R.layout.answer_layout)

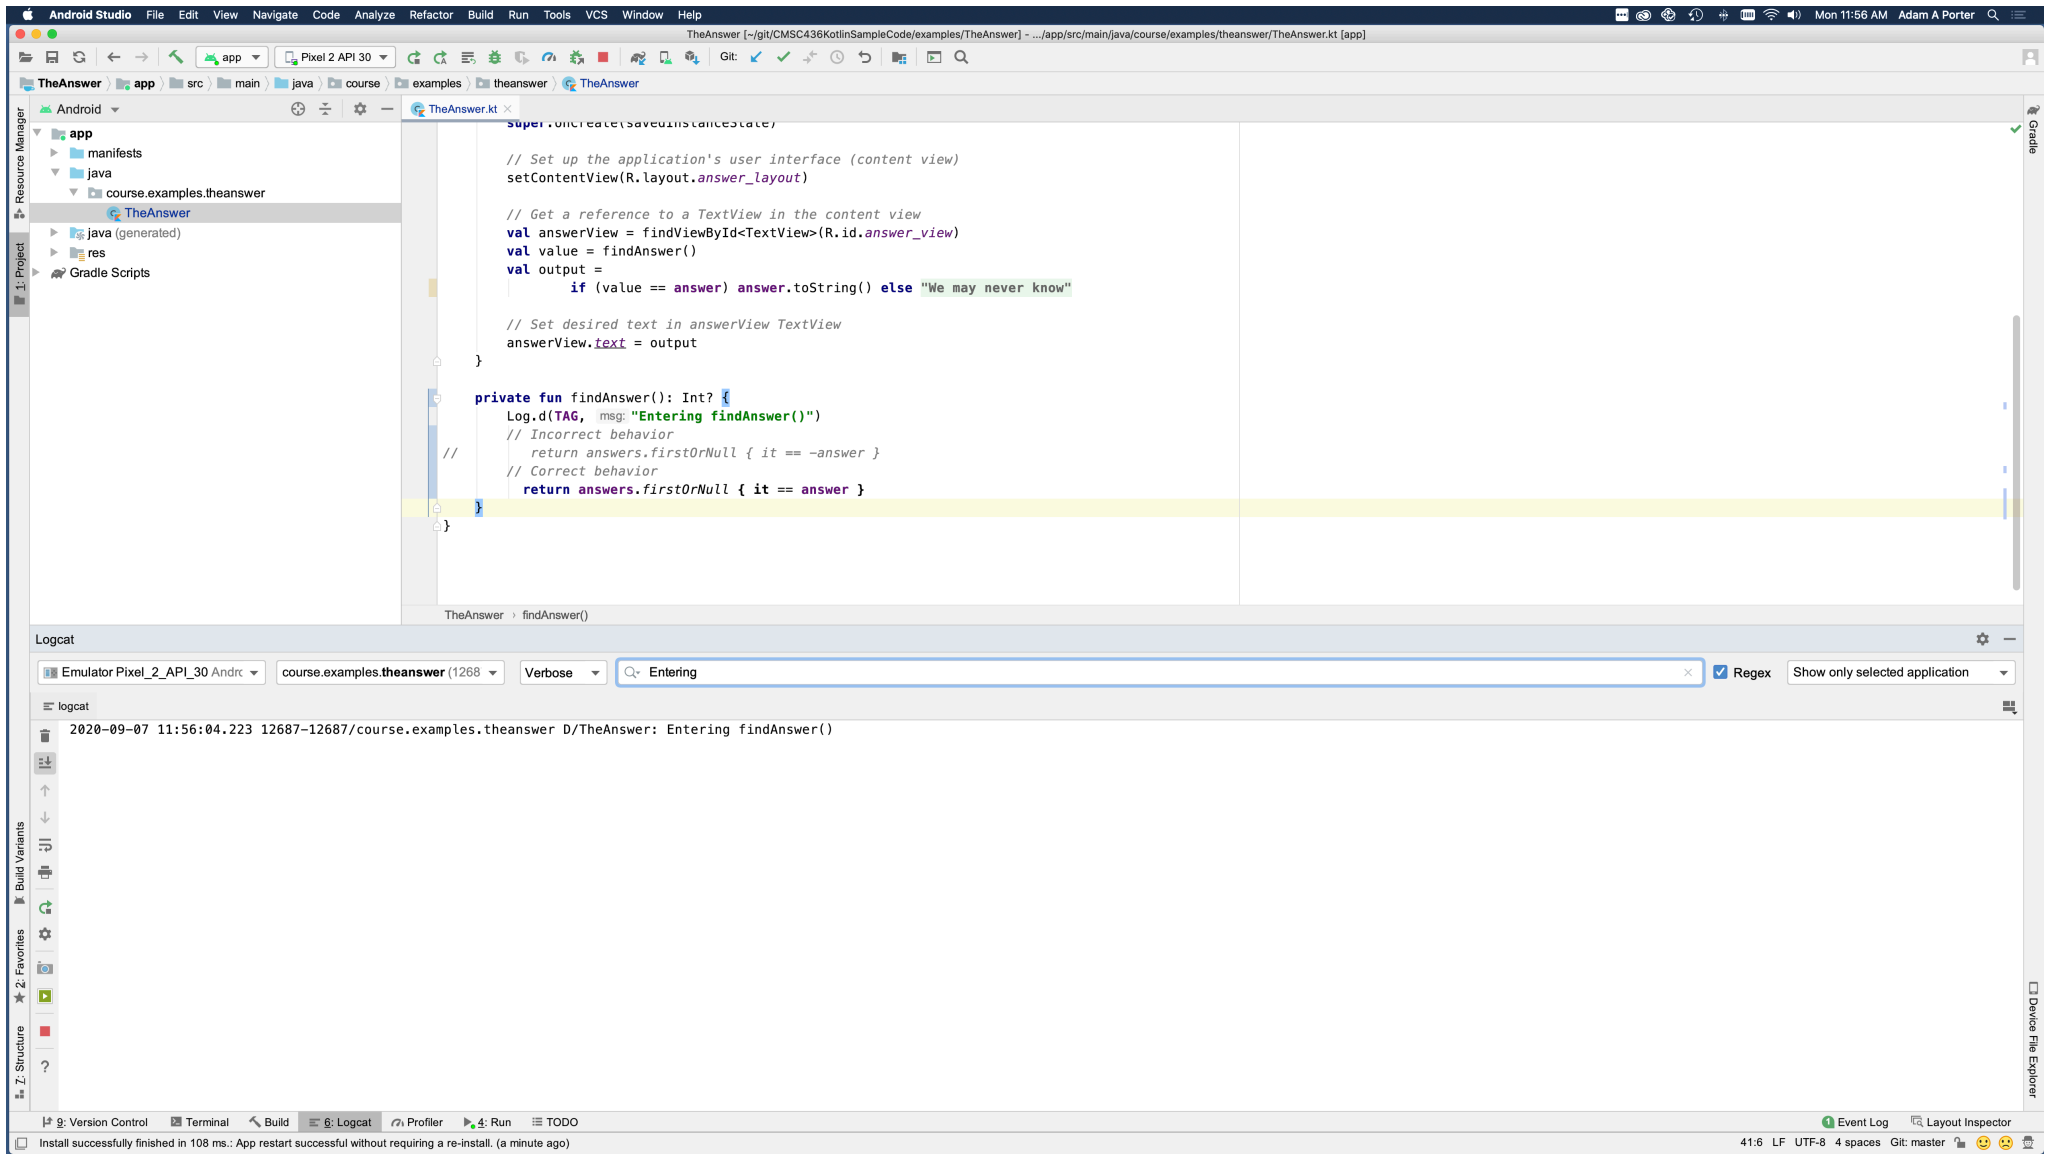

// Get a reference to a TextView in the content view
val answerView = findViewById<TextView>(R.id.answer_view)
val value = findAnswer()
val output =
    if (value == answer) answer.toString() else "We may never know"

// Set desired text in answerView TextView
answerView.text = output
}

private fun findAnswer(): Int? {
    Log.d(TAG, msg: "Entering findAnswer()")
    // Incorrect behavior
    // return answers.firstOrNull { it == -answer }
    // Correct behavior
    return answers.firstOrNull { it == answer }
}
```

The Logcat window shows the following log entries:

```

CPU Profiler

Logs execution sequences and timing taken from a running application

Graphically displays method traces and metrics

The screenshot shows the Android Studio IDE with a Kotlin file open. The Run menu is open, displaying various options for running and debugging the application. The code in the background is a Kotlin function `findAnswer()` that returns a list of integers. The function is annotated with `interface (content view)` and `in the content view`. The code is as follows:

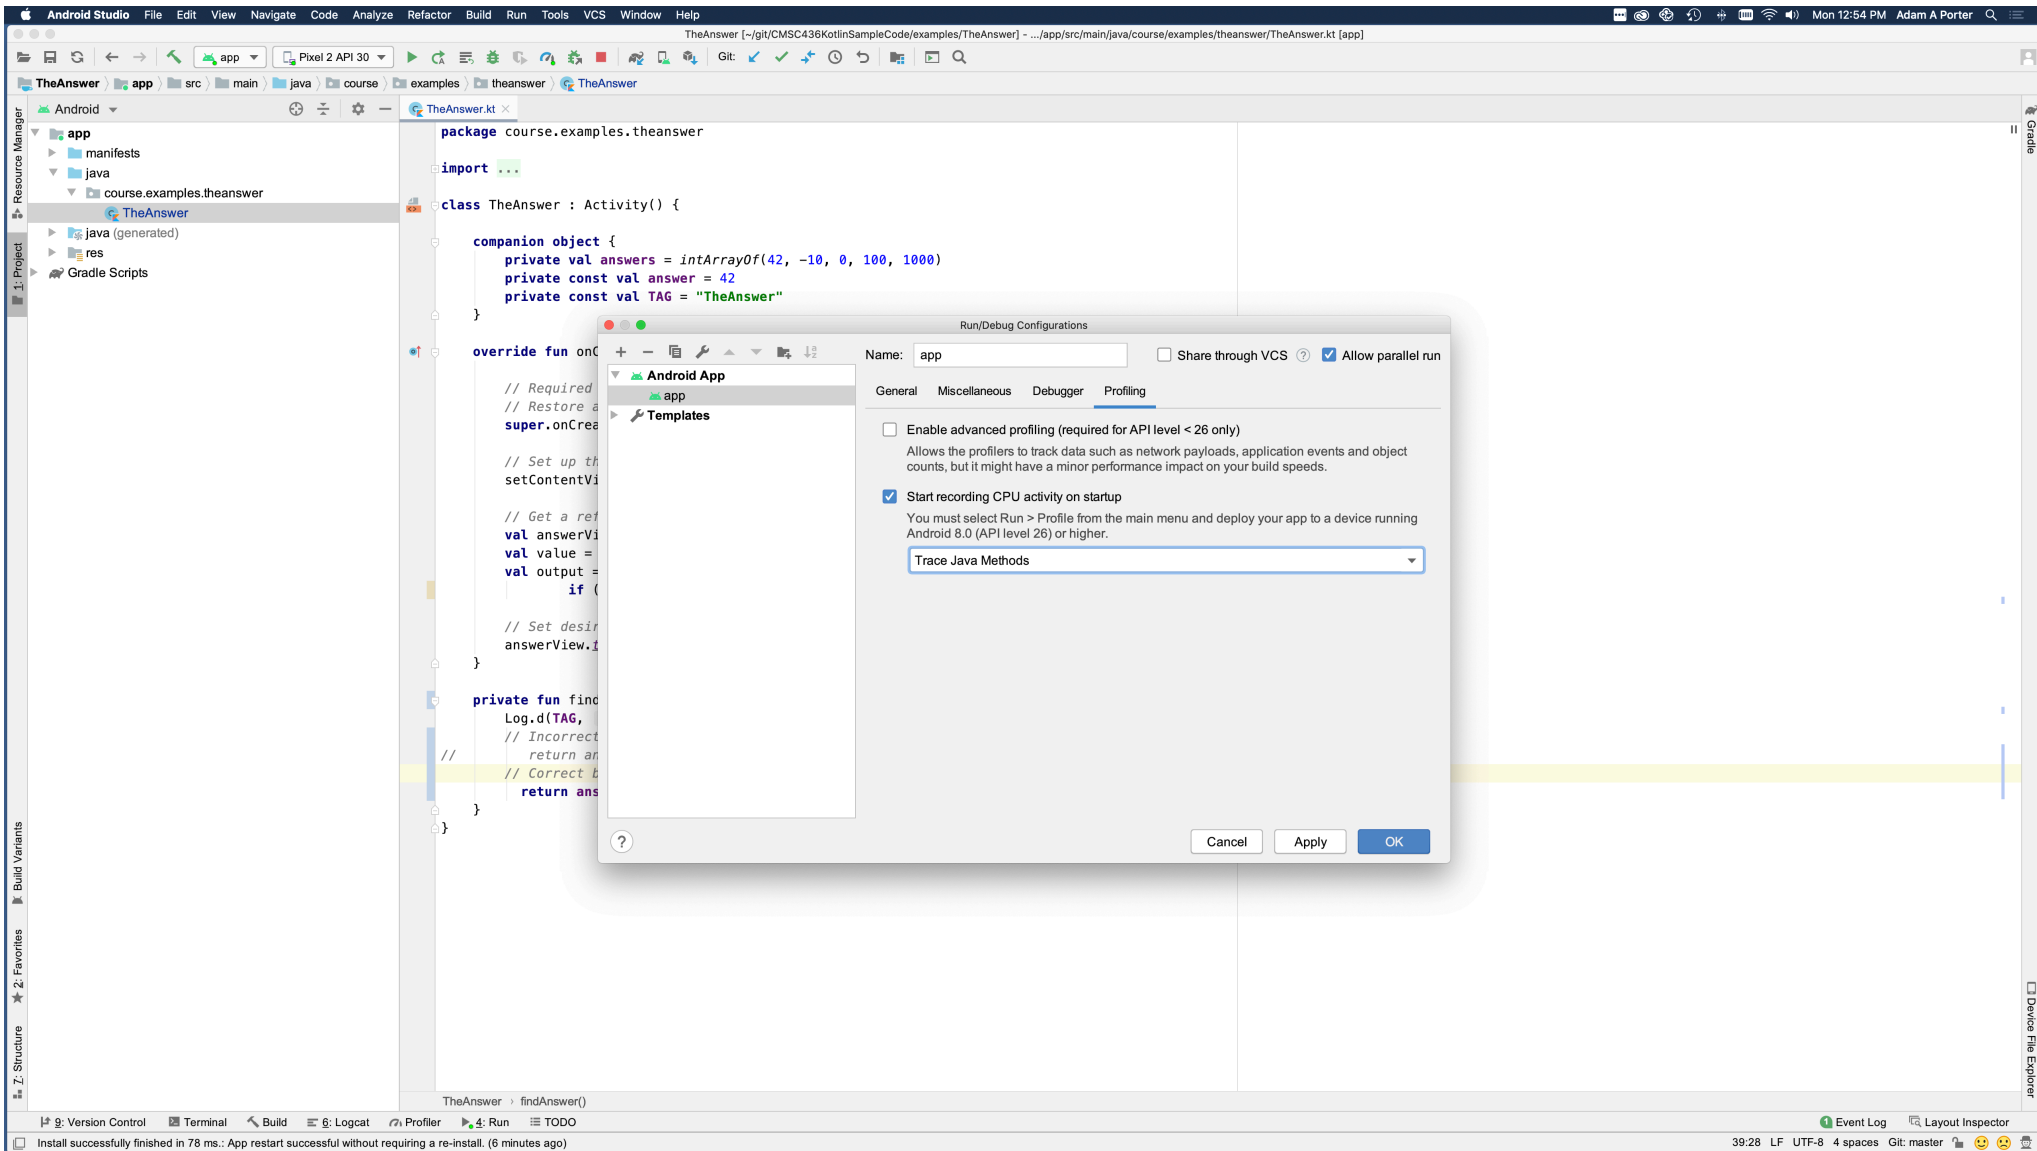

```
package com.example.theanswer

import androidx.appcompat.app.AppCompatActivity
import android.os.Bundle
import android.view.View
import android.widget.TextView

interface (content view)
in the content view

class MainActivity : AppCompatActivity() {
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        val textView: TextView = findViewById(R.id.answer_view)
        textView.text = findAnswer().toString() else "We may never know"
    }

    private fun findAnswer(): List<Int> {
        // return answers.firstOrNull { it == -answer }
        // Correct behavior
        return answers.firstOrNull { it == answer }
    }
}
```

Android Studio interface showing a Kotlin file named `findAnswer.kt` in the `course.examples.theanswer` package. The code defines a function `findAnswer` that returns a list of integers based on a condition. A context menu is open over the code, listing various actions such as `Run 'app'`, `Profile 'app'`, and `Attach Debugger to Android Process`. The code includes comments and a return statement: `return answers.firstOrNull { it == answer }`. The interface also shows the Resource Manager, Project view, and a status bar at the bottom with system information like 'Mon 12:54 PM' and 'Adam A Porter'.

```
package course.examples.theanswer

import androidx.appcompat.app.AppCompatActivity
import android.os.Bundle
import android.view.View
import android.widget.TextView

class MainActivity : AppCompatActivity() {

    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        TextView(R.id.answer_view)

        findViewById<TextView>(R.id.answer_view).text =
            findAnswer(answers.toList().firstOrNull { it == answer }?.toString() else "We may never know")
    }

    private fun findAnswer(answers: List<String>): String? {
        // Incorrect behavior
        // Correct behavior
        return answers.firstOrNull { it == answer }
    }
}
```

Android Studio interface showing a CPU profiler session for 'TheAnswer' on a Google Pixel 2 API 30 device. The CPU usage graph shows activity between 00.0000 and 07.0000 seconds. The 'Threads (13)' list includes FinalizerDaemon, Studio:InputCon, main, and several native threads. The 'Analysis' pane shows a call stack for the 'main()' thread, with 'next()' and 'nativePollOnce()' being the most time-consuming methods.

Layout Inspector

Shows the runtime organization of the user interface

Android Studio interface showing a Kotlin file named `TheAnswer.kt`. The code defines a class `TheAnswer` with a `findAnswer()` method. A context menu is open over the `return` statement in `findAnswer()`, with `Layout Inspector` selected.

```
package course.examples.theanswer

import androidx.appcompat.app.AppCompatActivity
import android.os.Bundle
import android.os.CountDownTimer

class TheAnswer : AppCompatActivity() {

    companion object {
        private const val TAG = "TheAnswer"
        private const val DELTA = 1000L
        private const val START_TIME = 1000L
        private const val END_TIME = 1000L
    }

    override fun onCreate(savedInstanceState: Bundle?) {
        // Required call through to Activity.onCreate()
        // Restore any saved instance state
        super.onCreate(savedInstanceState)

        // Set up the application's user interface (content view)
        setContentView(R.layout.answer_layout)

        // Get a reference to a TextView in the content view
        val answerView = findViewById<TextView>(R.id.answer_view)
        val value = findAnswer()
        val output =
            if (value == answer) answer.toString() else "We may never know"

        // Set desired text in answerView TextView
        answerView.text = output
    }

    private fun findAnswer(): Int? {
        Log.d(TAG, msg: "Entering findAnswer()")
        // Incorrect behavior
        // return answers.firstOrNull { it == -answer }
        // Correct behavior
        return answers.firstOrNull { it == answer }
    }
}
```

```
src/main/java/course/examples/theanswer/TheAnswer.kt
// Set up the application's user interface (content view)
setContentView(R.layout.answer_layout)

// Get a reference to a TextView in the content view
val answerView = findViewById<TextView>(R.id.answer_view)
val value = findAnswer()
val output =
    if (value == answer) answer.toString() else "We may never know"

// Set desired text in answerView TextView
answerView.text = output
}

private fun findAnswer(): Int? {
    Log.d(TAG, msg: "Entering findAnswer()")
    // Incorrect behavior
    return answers.firstOrNull { it == -answer }
    // Correct behavior
    return answers.firstOrNull { it == answer }
}
