

Announcements

- Do not delay starting working on your project.

Your Wam Web Folder

- If you want to use the University web server to host your web page you need to transfer your files to a designated folder in your wam account
- Folder /pub/**YOUR_DIRECTORY_ID_HERE**
- For example, if your directory id is superman then the folder is /pub/superman
- Your web address will be:
http://www.wam.umd.edu/~**YOUR_DIRECTORY_ID_HERE**/
- Notice there is a tilde (~) before your ID and a / after
- For the above example we have
<http://www.wam.umd.edu/~superman/>
- You must have a file named index.html in your directory
- You can also have additional files and directories

Transferring Data

- You can use any program you want to transfer data to your wam account
- Possibilities (See Resources section of class web page)
 - F-Secure (PC)
 - Fugu (Mac)

Passing Data To Function

- Reviewing passing by value with numbers
 - **Example:** PassByValueII.html, PassByValueIII.html
- How is an array to a function?
- Let's see a Memory Diagram
- Memory Diagram
 - Tool we will use to illustrate the associations between variables and entities (e.g., objects, arrays, etc.)
