

CMSC330 Spring 2014 Practice Problems 9 Solutions

1. Operational semantics

Use operational semantics to determine the values of the following OCaml codes:

a. 1

$$\cdot \frac{}{\bullet; 1 \Rightarrow 1} \cdot$$

b. 3 + 7

$$\frac{\bullet; 3 \Rightarrow 3 \quad \bullet; 7 \Rightarrow 7}{\bullet; 3 + 7 \Rightarrow 10}$$

c. 1 + (2 + 3)

$$\frac{\frac{\bullet; 2 \Rightarrow 2 \quad \bullet; 3 \Rightarrow 3}{\bullet; 1 \Rightarrow 1 \quad \bullet; (2 + 3) \Rightarrow 5}}{\bullet; 1 + (2 + 3) \Rightarrow 6}$$

d. (fun x → 4) 5

$$\begin{array}{ll} \bullet; (\text{fun } x \rightarrow 4) \Rightarrow (\bullet, \lambda x.4) & // 1) \text{ evaluate function to produce a closure} \\ \bullet; 5 \Rightarrow 5 & // 2) \text{ evaluate the argument} \\ \frac{x:5; 4 \Rightarrow 4}{\bullet; (\text{fun } x \rightarrow 4) 5 \Rightarrow 4} & // 3) \text{ evaluate body of closure, after extending} \\ & // \text{ environment w/ binding for parameter } x) \end{array}$$

e. (fun x → x + 6) 7

$$\begin{array}{ll} \frac{x:7; x \Rightarrow 7 \quad x:7; 6 \Rightarrow 6}{\bullet; (\text{fun } x \rightarrow x + 6) 7 \Rightarrow 13} & // 4) \text{ evaluate } x \text{ \& 6 in extended environment} \\ \bullet; (\text{fun } x \rightarrow x + 6) \Rightarrow (\bullet, \lambda x.x + 6) & // 1) \text{ evaluate function to produce a closure} \\ \bullet; 7 \Rightarrow 7 & // 2) \text{ evaluate the argument} \\ \frac{x:7; x + 6 \Rightarrow 13}{\bullet; (\text{fun } x \rightarrow x + 6) 7 \Rightarrow 13} & // 3) \text{ evaluate body of closure, after extending} \\ & // \text{ environment w/ binding for parameter } x) \end{array}$$

f. $(\text{fun } x \rightarrow (\text{fun } y \rightarrow y + x)) \ 8 \ 9$

Note expression $a \ b \ c$ is equivalent to $((a \ b) \ c)$, so we first evaluate $(a \ b)$ to find the value of the function, then apply the result to c .

<u>$x:8, v:9; v \Rightarrow 9 \quad x:8, v:9; x \Rightarrow 8$</u>	// 7) evaluate y & x // in extended env
$\bullet; (\text{fun } x \rightarrow (\text{fun } y \rightarrow y + x)) \Rightarrow (\bullet, \lambda x. (\text{fun } y \rightarrow y + x))$	// 2) eval func
$\bullet; 8 \Rightarrow 8$	// 3) eval arg
<u>$x:8; (\text{fun } y \rightarrow y + x) \Rightarrow (x:8, \lambda y. (y + x))$</u>	// 4) eval body after // extending env for x
$\bullet; (\text{fun } x \rightarrow (\text{fun } y \rightarrow y + x)) \ 8 \Rightarrow (x:8, \lambda y. (y + x))$	// 1) eval func
$\bullet; 9 \Rightarrow 9$	// 5) eval arg
<u>$x:8, v:9; (y + x) \Rightarrow 17$</u>	// 6) eval body after // extending env for y
$\bullet; (\text{fun } x \rightarrow (\text{fun } y \rightarrow y + x)) \ 8 \ 9 \Rightarrow 17$	

g. $\text{let } x = 5 \text{ in let } y = 7 \text{ in } x+y$

	<u>$\bullet, x:5, v:7; x \Rightarrow 5$</u>	<u>$\bullet, x:5, v:7; v \Rightarrow 7$</u>
	<u>$\bullet, x:5; 7 \Rightarrow 7$</u>	<u>$\bullet, x:5, v:7; x+v \Rightarrow 12$</u>
$\bullet; 5 \Rightarrow 5$	<u>$\bullet, x:5; \text{let } y = 7 \text{ in } x+y \Rightarrow 12$</u>	
$\bullet; \text{let } x = 5 \text{ in let } y = 7 \text{ in } x+y \Rightarrow 12$		

h. $\text{let } x = \text{let } x = 5 \text{ in } x+2 \text{ in } x+4$

<u>$\bullet, x:5; x \Rightarrow 5$</u>	<u>$\bullet, x:5; 2 \Rightarrow 2$</u>	
<u>$\bullet; 5 \Rightarrow 5$</u>	<u>$\bullet, x:5; x+2 \Rightarrow 7$</u>	<u>$\bullet, x:7; x \Rightarrow 7$</u>
<u>$\bullet; \text{let } x = 5 \text{ in } x+2 \Rightarrow 7$</u>	<u>$\bullet, x:7; x+4 \Rightarrow 11$</u>	<u>$\bullet, x:7; 4 \Rightarrow 4$</u>
$\bullet; \text{let } x = \text{let } x = 5 \text{ in } x+2 \text{ in } x+4 \Rightarrow 11$		

i. $\text{let } f = \text{fun } x \rightarrow x+5 \text{ in } f \ 7$

	<u>$\bullet, x:7; x \Rightarrow 7$</u>	<u>$\bullet, x:7; 5 \Rightarrow 5$</u>
	<u>$\bullet, f: (\bullet, \lambda x. x+5); f \Rightarrow (\bullet, \lambda x. x+5)$</u>	
	<u>$\bullet, f: (\bullet, \lambda x. x+5); 7 \Rightarrow 7$</u>	
	<u>$\bullet, x:7; x+5 \Rightarrow 12$</u>	
<u>$\bullet; \text{fun } x \rightarrow x+5 \Rightarrow (\bullet, \lambda x. x+5)$</u>	<u>$\bullet, f: (\bullet, \lambda x. x+5); f \ 7 \Rightarrow 12$</u>	
$\text{let } f = \text{fun } x \rightarrow x+5 \text{ in } f \ 7 \Rightarrow 12$		

j. let $y = 5$ in let $f = \text{fun } x \rightarrow x+y$ in let $y = 6$ in $f\ 7$ (for static scoping)

$y:5, x:7; x \Rightarrow 7$
 $y:5, x:7; y \Rightarrow 5$
 $y:5, f:(y:5, \lambda x.x+y), y:6; f \Rightarrow (y:5, \lambda x.x+y)$
 $y:5, f:(y:5, \lambda x.x+y), y:6; 7 \Rightarrow 7$
 $y:5, x:7; x+y \Rightarrow 12$
 $y:5, f:(y:5, \lambda x.x+y); 6 \Rightarrow 6 \quad y:5, f:(y:5, \lambda x.x+y), y:6; f\ 7 \Rightarrow 12$
 $y:5; \text{fun } x \rightarrow x+y \Rightarrow (y:5, \lambda x.x+y) \quad y:5, f:(y:5, \lambda x.x+y); \text{let } y = 6 \text{ in } f\ 7 \Rightarrow 12$
 $\bullet; 5 \Rightarrow 5 \quad y:5; \text{let } f = \text{fun } x \rightarrow x+y \text{ in let } y = 6 \text{ in } f\ 7 \Rightarrow 12$
 $\bullet; \text{let } y = 5 \text{ in let } f = \text{fun } x \rightarrow x+y \text{ in let } y = 6 \text{ in } f\ 7 \Rightarrow 12$

k. let $y = 5$ in let $f = \text{fun } x \rightarrow x+y$ in let $y = 6$ in $f\ 7$ (for dynamic scoping)

$y:5, f:(y:5, \lambda x.x+y), y:6, x:7; x \Rightarrow 7$
 $y:5, f:(y:5, \lambda x.x+y), y:6, x:7; y \Rightarrow 6$
 $y:5, f:(y:5, \lambda x.x+y), y:6; f \Rightarrow (y:5, \lambda x.x+y)$
 $y:5, f:(y:5, \lambda x.x+y), y:6; 7 \Rightarrow 7$
 $y:5, f:(y:5, \lambda x.x+y), y:6, x:7; x+y \Rightarrow 13$
 $y:5, f:(y:5, \lambda x.x+y); 6 \Rightarrow 6 \quad y:5, f:(y:5, \lambda x.x+y), y:6; f\ 7 \Rightarrow 13$
 $y:5; \text{fun } x \rightarrow x+y \Rightarrow (y:5, \lambda x.x+y) \quad y:5, f:(y:5, \lambda x.x+y); \text{let } y = 6 \text{ in } f\ 7 \Rightarrow 13$
 $\bullet; 5 \Rightarrow 5 \quad y:5; \text{let } f = \text{fun } x \rightarrow x+y \text{ in let } y = 6 \text{ in } f\ 7 \Rightarrow 13$
 $\bullet; \text{let } y = 5 \text{ in let } f = \text{fun } x \rightarrow x+y \text{ in let } y = 6 \text{ in } f\ 7 \Rightarrow 13$

2. Programming languages

a. Describe the difference between HTML and XML.

HTML tags are predefined and presentation-oriented, whereas XML tags are user defined and are intended for describing data and metadata.

b. Describe the difference between query languages and programming languages.

Query languages are designed to make requests to a database or information system, whereas programming languages are designed to express computations that can be performed by a machine.

3. Markup languages

- a. Creating your own XML tags, write an XML document that organizes the following information: 1-hour test on Spanish Monday in Jiménez worth 15%. 1-hour test on Computers Tuesday in CSIC worth 10%. 30-minute test on Computers Friday in AVW worth 5%.

```
<testList>
  <test>
    <length>1 hour</length>
    <subject>Spanish</subject>
    <date>Monday</date>
    <location>Jiménez</location>
    <value>15 % </value>
  </test>
  <test>
    <length>1 hour</length>
    <subject>Computers</subject>
    <date>Tuesday</date>
    <location>CSIC</location>
    <value>10 % </value>
  </test>
  <test>
    <length>30 minute</length>
    <subject>Computers</subject>
    <date>Friday</date>
    <location>A VW</location>
    <value>5 % </value>
  </test>
</testList>
```

OR

```
<testList>
  <test subject="Spanish">
    <length unit="hour">1</length>
    ...
  </test>
  <test subject="Computers" >
    <length unit="hour">1</length>
    ...
  </test>
  <test subject="Computers" >
    <length unit="minute">30</length>
    ...
  </test>
</testList>
```
