

## CMSC330 Spring 2012 Quiz #1 Solutions

1. (6 pts) What is the output (if any) of the following Ruby programs? Write FAIL if code does not execute.

a. (2 pts)    a = "foodie"  
              if a =~ /(o+)/ then  
              puts \$1  
              end  
  
# Output = **oo**

b. (2 pts)    a = [ ]  
              a["foo"] = "bar"  
              puts a["foo"]  
  
# Output = **FAIL**

c. (2 pts)    a = { }  
              a["foo"] = "bar"  
              puts a["foo"]  
              puts a["bar"]  
  
# Output = **bar**  
**nil**

2. (8 pts) Write a Ruby method *extractNum* that given a string *str*, uses regular expressions and back references to print the first sequence of consecutive digits in the string. For instance, *extractNum*("foo12bar154zed") should print "12". Print "None" if there are no digits in the input string.

```
def extractNum(str)
    if str =~ /([0-9][0-9]+)/      OR    if str =~ /(d\d+)/
        puts $1
    else
        puts "None"
    end
end
```

3. (6 pts) Write a Ruby method *prtStrArray* that given an array of strings *strs*, uses the Array.each method and a code block to print out all the strings prefixed by '='. For instance, given the array ["foo", "bar"], your code should print out the following:

```
=foo
=bar
```

Some helpful functions (not all need to be used)	
a.size	// number of elements in the array
a.each { ... }	// apply code block to each element in array

```
def prtStrArray(strs)
    strs.each { |x| puts "=#{x}" }      OR      strs.each { |x| puts "="+x }
end
```
