

Announcements

- If you did not get your quiz back, please come to the front and get it now.
- Project #1: Due tomorrow. Verify your submission!
- Project #2 will be posted tomorrow
- We will have quiz #2 on Wednesday
- Have your laptops out today!

Practice Session

Please try to create the webpage on the other screen.

Note: This class session is NOT the time to be working on Project #1

Requirements:

- Your page will describe one of YOUR hobbies.
- Structure, spacing, colors, fonts, etc. **must match** the example as closely as possible.
- You MUST use a separate CSS file.
- **Absolutely NOTHING about style can appear in your HTML file.**

Snorkeling

Introduction

Snorkeling is really a lot of fun! Even if you're not a great swimmer, you can see a lot of interesting life underwater by snorkeling. Although scuba divers can explore further down in the depths of the ocean, snorkeling still allows you to explore the surface of the ocean without the expense and complexity of scuba diving. Even little children can enjoy snorkeling.

Fun Facts

- Snorkels were used 5000 years ago by sponge farmers in Crete.
- There are three kinds of snorkel: dry, semi-dry, and wet.
- Snorkeling is a lot easier with fins!

Equipment

Typical Snorkeling Equipment

name	purpose
snorkel	allows you to breathe
mask	keeps water out of your eyes and also keeps water from going up your nose
fins	allow you to propel yourself more easily
wet suit	optional -- keeps you warm
booties	optional -- protects your feet while entering/exiting the water
camera	optional -- let's you document what you've seen

Hints

- Don't forget at the top of your HTML file:
`<link rel="stylesheet" type="text/css" href="stylesheet.css" />`
- Create three separate **divisions** (intro, facts, data)
- Set padding and/or margins to adjust spacing
- Use **Identifiers** for each item you want to style uniquely
- Remember that to **center** an entire element horizontally, you can use:
`margin: auto;`
To **center** the **text** that is inside an element, use:
`text-align: center;`
- At the bottom I used a table inside another table.
- Use Two **classes** for the alternating red/blue colors in the table (blueRow, redRow)
- The font-families I used were arial and "cursive"
