Prim's Algorithm

```
procedure prim(G,W,s)
      for each vertex v \in V[G] do
             \texttt{d[v]} \leftarrow \infty
             \pi \, [\mathbf{v}] \; \leftarrow \; \mathbf{NIL}
      end for
      \texttt{outside} \, \leftarrow \, \texttt{V[G]}
      d[s] \leftarrow 0
      while outside \neq \phi do
             u \,\leftarrow\, \texttt{Extract\_Min}(\texttt{outside with respect to distance d})
             for each v adjacent to u do
                   if v \in \text{outside} and W[u,v] < d[v] then
                          \texttt{d[v]} \leftarrow \texttt{W[u,v]}
                          \pi[v] \leftarrow u
                   end if
             end for
      end while
end procedure
```

Prim's Algorithm, Dense Graphs

```
procedure prim(G,W)
      for i = 1 to n do
            d[i] \leftarrow \infty
            \mathtt{outside[i]} \, \leftarrow \, \mathtt{true}
            \pi[i] \leftarrow \text{NIL}
      end for
      \texttt{d[0]} \; \leftarrow \; \infty
      d[1] \leftarrow 0
      for i = 1 to n do
            k \;\leftarrow\; 0
            for j = 1 to n do if outside[j] and d[j] \leq d[k] then k \leftarrow j
            \texttt{outside[k]} \; \leftarrow \; \texttt{false}
            for j = 1 to n do if outside[j] and W[j,k] < d[j] then
                  d[j] \leftarrow W[j,k]
                  \pi[j] \leftarrow k
            end for
      end for
end procedure
```

Prim's Algorithm, Sparse Graphs

{The priority queue for the distances of each vertex from the tree is stored as a min heap. The actual item in the heap is the name of the vertex. Its value (for heap operations) is in the array d[1,...,n]}

```
procedure prim(G,W)
     for i = 1 to n do
          \texttt{MinHeap[i]} \leftarrow \texttt{i}
          WhereInHeap[i] \leftarrow i
          d[i] \leftarrow \infty
          outside[i] \leftarrow true
          \pi[i] \leftarrow \text{NIL}
     end for
     d[1] \leftarrow 0
     for i = n downto 1 do
          u \leftarrow MinHeap[1]
          MinHeap[1] \leftarrow MinHeap[i]
          WhereInHeap[MinHeap[1]] \leftarrow 1
          SiftDown(1,i-1)
                                   {Keeping track of WhereInHeap}
          for each v \in adj[u] do
                if v \in \text{outside} and W[u,v] < d[v] then
                     d[v] \leftarrow W[u,v]
                     \pi[v] \leftarrow u
                     SiftUp(WhereInHeap[v])
                                                       {Keeping track of WhereInHeap}
                end if
          end for
     end for
end procedure
```
