CMSC436: Programming Handheld Systems
Introduction to Firebase
Today’s Topics

Google’s Firebase Platform
Adding services to your android application
  User Authentication
  Realtime Database
Firebase

Firebase is a mobile and web application development platform developed by Firebase, Inc. in 2011, then acquired by Google in 2014. As of October 2018, the Firebase platform has 18 products, which are used by 1.5+ million apps - wikipedia

Example of mobile backend as a service design pattern

Similar to AWS for web applications
Today’s Focus

Adding Firebase to an Android App
Firebase Email Authentication Service
Firebase Realtime Database
Adding Firebase to an Android App

Two choices:

Manually add firebase through the firebase console (https://console.firebase.google.com/)

Directly from inside Android Studio (select Tools -> Firebase from the menu). This option requires you to select a service to add to your app.

Process generates a google-services.json file that goes into your project directory.

See: https://firebase.google.com/docs/android/setup#kotlin+ktx
Firebase Email/Password Authentication Service

What it does

- Allows users to sign up with email and password
- Stores users’ login information separate from database
- Activities gain access to currently logged-in user via API
- Combined with security rules can restrict data access to the logged in user (Note: this requires the data be structured in a particular pattern – more on this later)

FirebaseEmailAuthExample
Firebase Email/Password Authentication Service

Can view all application users from the firebase console
Firebase Realtime Database

Firebase offers 2 types of database services

Realtime Database (original)

Cloud Firestore (Newer service)

Differences between the 2 options

See: https://firebase.google.com/docs/database/rtodb-vs-firestore?authuser=0
Firebase Realtime Database

Our focus will be the original realtime database

An efficient, low-latency solution for mobile apps that require synced states across clients in realtime
Firebase Realtime Database

Add the dependency for Realtime Database to your app-level build.gradle file

   e.g., implementation 'com.google.firebase:firebase-database:20.0.4'

Configure Realtime Database Rules

See: https://firebase.google.com/docs/database/android/start?authuser=0
Example Rules with No Authorization

{
    "rules": {
        ".read": true,
        ".write": true
    }
}
Example Rules with Authorization

{
  "rules": {
    ".read": "auth != null",
    ".write": "auth != null"
  }
}
Firebase Realtime Database

Realtime Database has a REST API

Use a Firebase Database URL as a REST endpoint

Append `.json` to the end of the URL and send a request from an HTTPS client

Let’s see an example using Postman

See: https://firebase.google.com/docs/reference/rest/database
Firebase Realtime Database

Data is structured and a JSON tree

When you add data to the JSON tree, it becomes a node in the existing JSON structure with an associated key
Data Structure Best Practices

Avoid nesting data

- Iterating through the data becomes problematic
- Any data request returns the entire tree
Data Structure Best Practices

Flatten the data structure

Split data into separate paths (also called denormalization)

Can efficiently download data in separate calls as needed
Reading and Writing Data

Data written to FirebaseDatabase reference

Retrieved by attaching an asynchronous listener to the reference

Listener triggered once for the initial state of the data and again anytime the data changes

See: https://firebase.google.com/docs/database/android/read-and-write?authuser=0
Firebase Realtime Database

Working with Lists of Data

See: https://firebase.google.com/docs/database/android/lists-of-data?authuser=0
FirebaseRealtimeDatabaseExample

Called MyHomeLibrary on Firebase

Allows you to add the authors in your home library and corresponding titles
Firebase Realtime Database Example

- Enter author's name:
  - America
  - Adam Porter

Authors
Tap on an Author to add and view titles

Titles
My Life
Adam Porter
Enter title name
ADD TITLE

5
