

In some windows systems (e.g., Vista) it could be the case that you can not set Komodo as your default editor (via Right-click->Choose Default Program). To solve the problem:

- a. Open window's regedit
- b. Go to HKEY_CLASSES_ROOT\Applications\komodo.exe
- c. Reach shell\open\command
- d. At this point you should see an incorrect path that needs to be updated.
