

Robotics Minor

Please see the [powerpoint deck attached](#) which describes the minor.

One thing not considered there is how admission to the minor is carried out. Since four departments (ECE, MechE, Aero, and CS) are contributing a class, and possible students, the question is how to choose which students should be accepted.

The proposal is to assign each department a fixed number of students to be admitted, a number based on the size of the overall population, and a number that can be determined at the entire committee's discretion. The current favored approach is 40% of the students in a given cohort are divided evenly among the four departments; 50% are divided proportionally; and the last 10% are under the full committee's discretion. Based on recent enrollment data, this breakdown would be (for 50 students):

MechE: 10

Aero: 7

ECE: 10

CS: 17

Committee Discretion: 5
