**Article Title:** Whack a Mole: The new president (of Colombia) calls off talks with a lesser-known leftist insurgent group.

**Article Title:** Whack a Mole: The new president (of Colombia) calls off talks with a lesser-known leftist insurgent group.

**Context:** In 2016 FARC, a left-wing insurgent group in Columbia, signed a peace treaty that ended 50 years of conflict **Yeah**!

ション ふゆ アメリア メリア しょうくしゃ

**Article Title:** Whack a Mole: The new president (of Colombia) calls off talks with a lesser-known leftist insurgent group.

**Context:** In 2016 FARC, a left-wing insurgent group in Columbia, signed a peace treaty that ended 50 years of conflict **Yeah**!

The former president of Columbia got the Nobel Peace Prize (the leader of FARC did not - I do not know why).

**Article Title:** Whack a Mole: The new president (of Colombia) calls off talks with a lesser-known leftist insurgent group.

**Context:** In 2016 FARC, a left-wing insurgent group in Columbia, signed a peace treaty that ended 50 years of conflict **Yeah**!

The former president of Columbia got the Nobel Peace Prize (the leader of FARC did not – I do not know why).

However a more extreme insurgent group, ELN, is still active. Why did FARC negotiate but ELN did not?:

**Article Title:** Whack a Mole: The new president (of Colombia) calls off talks with a lesser-known leftist insurgent group.

**Context:** In 2016 FARC, a left-wing insurgent group in Columbia, signed a peace treaty that ended 50 years of conflict **Yeah**!

The former president of Columbia got the Nobel Peace Prize (the leader of FARC did not - I do not know why).

However a more extreme insurgent group, ELN, is still active. Why did FARC negotiate but ELN did not?:

**Quote:** ... And the ELN's **strong encryption system** has prevented the army from extracting information from seized computers, as it did with FARC.

**Article Title:** Whack a Mole: The new president (of Colombia) calls off talks with a lesser-known leftist insurgent group.

**Context:** In 2016 FARC, a left-wing insurgent group in Columbia, signed a peace treaty that ended 50 years of conflict **Yeah**!

We will refer to both as Fermat's Little Theorem.

Repeated squaring would take  $\sim$  lg(999, 999, 999)  $\sim$  30 mults.

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Repeated squaring would take  $\sim lg(999, 999, 999) \sim 30$  mults. By Fermat's Little Thm  $11^{106} \equiv 1 \pmod{107}$ .

Repeated squaring would take  $\sim$  lg(999, 999, 999)  $\sim$  30 mults. By Fermat's Little Thm  $11^{106}\equiv 1 \pmod{107}$ . Note 999, 999, 999  $\equiv$  27 (mod 106)

Repeated squaring would take  $\sim$  lg(999, 999, 999)  $\sim$  30 mults. By Fermat's Little Thm  $11^{106}\equiv 1 \pmod{107}$ . Note 999, 999, 999  $\equiv$  27 (mod 106)

999,999,999 = 106k + 27 (don't care what k is)

Repeated squaring would take  $\sim lg(999, 999, 999) \sim 30$  mults. By Fermat's Little Thm  $11^{106} \equiv 1 \pmod{107}$ . Note 999, 999, 999  $\equiv 27 \pmod{106}$ 

999,999,999 = 106k + 27 (don't care what k is)

 $11^{999,999,999} = 11^{106k} \times 11^{27} = (11^{106})^k \times 11^{27} \equiv 1^k 11^{27} \equiv 11^{27} \pmod{10}$ 

Repeated squaring would take  $\sim lg(999, 999, 999) \sim 30$  mults. By Fermat's Little Thm  $11^{106} \equiv 1 \pmod{107}$ . Note 999, 999, 999  $\equiv 27 \pmod{106}$ 

999,999,999 = 106k + 27 (don't care what k is)

 $11^{999,999,999} = 11^{106k} \times 11^{27} = (11^{106})^k \times 11^{27} \equiv 1^k 11^{27} \equiv 11^{27} \pmod{10}$ 

 $11^{999,999,999} \equiv 11^{999,999,999} \pmod{106} \pmod{107} \equiv 11^{27} \pmod{107}$ 

▲ロ ▶ ▲周 ▶ ▲ ヨ ▶ ▲ ヨ ▶ → 目 → の Q @

Repeated squaring would take  $\sim lg(999, 999, 999) \sim 30$  mults. By Fermat's Little Thm  $11^{106} \equiv 1 \pmod{107}$ . Note 999, 999, 999  $\equiv 27 \pmod{106}$ 

999,999,999 = 106k + 27 (don't care what k is)

$$11^{999,999,999} = 11^{106k} \times 11^{27} = (11^{106})^k \times 11^{27} \equiv 1^k 11^{27} \equiv 11^{27} \pmod{10}$$

$$\begin{split} 11^{999,999,999} &\equiv 11^{999,999,999} \pmod{106} \pmod{107} \equiv 11^{27} \pmod{107} \\ \text{Now do normal repeated squaring, } 2 \lg(27) = 10. \text{ Can do better.} \\ \text{Recall its really} \\ \lg(27) + \text{ the number of 1's in the binary rep of 27.} \end{split}$$

Repeated squaring would take  $\sim lg(999, 999, 999) \sim 30$  mults. By Fermat's Little Thm  $11^{106} \equiv 1 \pmod{107}$ . Note 999, 999, 999  $\equiv 27 \pmod{106}$ 

999,999,999 = 106k + 27 (don't care what k is)

$$11^{999,999,999} = 11^{106k} \times 11^{27} = (11^{106})^k \times 11^{27} \equiv 1^k 11^{27} \equiv 11^{27} \pmod{10}$$

 $11^{999,999,999} \equiv 11^{999,999,999} \pmod{106} \pmod{107} \equiv 11^{27} \pmod{107}$ Now do normal repeated squaring,  $2 \lg(27) = 10$ . Can do better. Recall its really  $\lg(27)$ + the number of 1's in the binary rep of 27. Can we generalize?

Repeated squaring would take  $\sim lg(999, 999, 999) \sim 30$  mults. By Fermat's Little Thm  $11^{106} \equiv 1 \pmod{107}$ . Note 999, 999, 999  $\equiv 27 \pmod{106}$ 

999,999,999 = 106k + 27 (don't care what k is)

$$11^{999,999,999} = 11^{106k} \times 11^{27} = (11^{106})^k \times 11^{27} \equiv 1^k 11^{27} \equiv 11^{27} \pmod{10}$$

 $11^{999,999,999} \equiv 11^{999,999,999} \pmod{106} \pmod{107} \equiv 11^{27} \pmod{107}$ 

Now do normal repeated squaring,  $2 \lg(27) = 10$ . Can do better. Recall its really  $\lg(27)$ + the number of 1's in the binary rep of 27. Can we generalize? Yes

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

**Generalize** p prime,  $a \not\equiv 0 \pmod{p}$ ,  $m \in \mathbb{N}$ .

**Generalize** p prime,  $a \not\equiv 0 \pmod{p}$ ,  $m \in \mathbb{N}$ . We want to compute  $a^m \pmod{p}$ .

**Generalize** p prime,  $a \not\equiv 0 \pmod{p}$ ,  $m \in \mathbb{N}$ . We want to compute  $a^m \pmod{p}$ . We know that  $a^{p-1} \equiv 1 \pmod{p}$ .

**Generalize** p prime,  $a \not\equiv 0 \pmod{p}$ ,  $m \in \mathbb{N}$ .

We want to compute  $a^m \pmod{p}$ .

We know that  $a^{p-1} \equiv 1 \pmod{p}$ . Divide *m* by p-1:

\*ロ \* \* @ \* \* ミ \* ミ \* ・ ミ \* の < や

**Generalize** p prime,  $a \not\equiv 0 \pmod{p}$ ,  $m \in \mathbb{N}$ . We want to compute  $a^m \pmod{p}$ . We know that  $a^{p-1} \equiv 1 \pmod{p}$ . Divide m by p-1: m = k(p-1) + r

Generalize p prime,  $a \not\equiv 0 \pmod{p}$ ,  $m \in \mathbb{N}$ . We want to compute  $a^m \pmod{p}$ . We know that  $a^{p-1} \equiv 1 \pmod{p}$ . Divide m by p-1: m = k(p-1) + rHence:

Generalize p prime,  $a \not\equiv 0 \pmod{p}$ ,  $m \in \mathbb{N}$ . We want to compute  $a^m \pmod{p}$ . We know that  $a^{p-1} \equiv 1 \pmod{p}$ . Divide m by p - 1: m = k(p-1) + rHence:

$$a^m \equiv a^{k(p-1)+r} \equiv (a^{p-1})^k \times a^r \equiv 1^k a^r \equiv a^r$$

**Generalize** p prime,  $a \not\equiv 0 \pmod{p}$ ,  $m \in \mathbb{N}$ . We want to compute  $a^m \pmod{p}$ . We know that  $a^{p-1} \equiv 1 \pmod{p}$ . Divide m by p - 1: m = k(p - 1) + rHence:

$$a^m \equiv a^{k(p-1)+r} \equiv (a^{p-1})^k \times a^r \equiv 1^k a^r \equiv a^r$$

\*ロ \* \* @ \* \* ミ \* ミ \* ・ ミ \* の < や

Since  $r \equiv m \pmod{p-1}$ ,  $a^m \equiv a^{m \mod p-1} \pmod{p}$ 

Generalize p prime,  $a \not\equiv 0 \pmod{p}$ ,  $m \in \mathbb{N}$ . We want to compute  $a^m \pmod{p}$ . We know that  $a^{p-1} \equiv 1 \pmod{p}$ . Divide m by p - 1: m = k(p-1) + rHence:

$$a^m \equiv a^{k(p-1)+r} \equiv (a^{p-1})^k \times a^r \equiv 1^k a^r \equiv a^r$$

Since  $r \equiv m \pmod{p-1}$ ,  $a^m \equiv a^{m \mod p-1} \pmod{p}$ This last equation is the important point

We don't have Alice sending Bob messages.

In examples we do in slides and HW we might not have  $e \in \{R/3, \ldots, 2R/3\}$  since we want to have easy computations for educational purposes.

 $L_1 = 3.$   
Pob wants to cond 1100100 (note  $L_2 = 7$  bits)

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Bob wants to send 1100100 (note-  $L_2 = I$  bits).

1. Bob generates  $L_1 = 3$  random bits. 100.

$$p = 31, q = 37, N = pq = 31 \times 37 = 1147.$$
  
 $R = \phi(N) = 30 * 36 = 1080$   
 $e = 77$  (e rel prime to R),  $d = 533$  (ed  $\equiv 1 \pmod{R}$ ).  
 $L_1 = 3.$ 

Bob wants to send 1100100 (note-  $L_2 = 7$  bits).

- 1. Bob generates  $L_1 = 3$  random bits. 100.
- Bob sends 1001100100 which is 612 in base 10 by sending 612<sup>77</sup> (mod 1147) which is 277.

$$p = 31, q = 37, N = pq = 31 \times 37 = 1147.$$
  
 $R = \phi(N) = 30 * 36 = 1080$   
 $e = 77$  (e rel prime to R),  $d = 533$  (ed  $\equiv 1 \pmod{R}$ ).  
 $L_1 = 3.$ 

Bob wants to send 1100100 (note-  $L_2 = 7$  bits).

- 1. Bob generates  $L_1 = 3$  random bits. 100.
- Bob sends 1001100100 which is 612 in base 10 by sending 612<sup>77</sup> (mod 1147) which is 277.

ション ふゆ アメリア メリア しょうくしゃ

3. Alice decodes by doing  $277^{533} \pmod{1147} = 612$ .

$$p = 31, q = 37, N = pq = 31 \times 37 = 1147.$$
  
 $R = \phi(N) = 30 * 36 = 1080$   
 $e = 77$  (e rel prime to R),  $d = 533$  (ed  $\equiv 1 \pmod{R}$ ).  
 $L_1 = 3.$ 

Bob wants to send 1100100 (note-  $L_2 = 7$  bits).

- 1. Bob generates  $L_1 = 3$  random bits. 100.
- Bob sends 1001100100 which is 612 in base 10 by sending 612<sup>77</sup> (mod 1147) which is 277.
- 3. Alice decodes by doing  $277^{533} \pmod{1147} = 612$ .
- 4. Alice puts 612 into binary to get 1001100100. She knows to only read the last 7 bits 1100100.

ション ふゆ アメリア メリア しょうくしゃ

$$p = 31, q = 37, N = pq = 31 \times 37 = 1147.$$
  
 $R = \phi(N) = 30 * 36 = 1080$   
 $e = 77$  (e rel prime to R),  $d = 533$  (ed  $\equiv 1 \pmod{R}$ ).  
 $L_1 = 3.$ 

Bob wants to send 1100100 (note-  $L_2 = 7$  bits).

- 1. Bob generates  $L_1 = 3$  random bits. 100.
- Bob sends 1001100100 which is 612 in base 10 by sending 612<sup>77</sup> (mod 1147) which is 277.
- 3. Alice decodes by doing  $277^{533} \pmod{1147} = 612$ .
- 4. Alice puts 612 into binary to get 1001100100. She knows to only read the last 7 bits 1100100.

**Important** If later Bob wants to send 100 again he will choose a DIFFERENT random 3 bits so Eve won't know he sent the same message.

# How Important Is Public Key?

\*ロ \* \* @ \* \* ミ \* ミ \* ・ ミ \* の < や

Public key is mostly used for giving out keys to be used for classical systems.

<□ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

This makes the following work:

Public key is mostly used for giving out keys to be used for classical systems.

This makes the following work:

1. Amazon – Credit Cards

Public key is mostly used for giving out keys to be used for classical systems.

This makes the following work:

- 1. Amazon Credit Cards
- 2. Ebay Paypal

Public key is mostly used for giving out keys to be used for classical systems.

What if Factoring can be done fast (quantum, fancy number theory, better hardware)?

<□ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ >

1. Since 1960:

What if Factoring can be done fast (quantum, fancy number theory, better hardware)?

1. Since 1960:

1.1 Math-advances have sped up factoring by 1000 times.

What if Factoring can be done fast (quantum, fancy number theory, better hardware)?

- 1. Since 1960:
  - 1.1 Math-advances have sped up factoring by 1000 times.
  - 1.2 Hardware-advances have sped up factoring by 1000 times.

What if Factoring can be done fast (quantum, fancy number theory, better hardware)?

- 1. Since 1960:
  - 1.1 Math-advances have sped up factoring by 1000 times.
  - 1.2 Hardware-advances have sped up factoring by 1000 times.

1.3 So Factoring has been sped up 1,000,000 times.

What if Factoring can be done fast (quantum, fancy number theory, better hardware)?

- 1. Since 1960:
  - 1.1 Math-advances have sped up factoring by 1000 times.
  - 1.2 Hardware-advances have sped up factoring by 1000 times.

- 1.3 So Factoring has been sped up 1,000,000 times.
- 2. Factoring is in Quantum P, though making that practical seems a ways off.

What if Factoring can be done fast (quantum, fancy number theory, better hardware)?

- 1. Since 1960:
  - 1.1 Math-advances have sped up factoring by 1000 times.
  - 1.2 Hardware-advances have sped up factoring by 1000 times.
  - 1.3 So Factoring has been sped up 1,000,000 times.
- 2. Factoring is in Quantum P, though making that practical seems a ways off.
- 3. There are now several Public Key Systems based on **other** hardness assumptions. See next slide.

Non-factoring based crypto systems:

Non-factoring based crypto systems:

1. Elliptic Curve Cryto Based on elliptic curves (duh). Classically this is better than RSA since is secure with smaller parameters. However, a quantum computer can crack it. Has been around since 1985 but hard math made it hard to use.

Non-factoring based crypto systems:

 Elliptic Curve Cryto Based on elliptic curves (duh). Classically this is better than RSA since is secure with smaller parameters. However, a quantum computer can crack it. Has been around since 1985 but hard math made it hard to use.

2. Lattice-based Crypto Based on certain lattice problems being hard to solve. Has been around since 1995.

Non-factoring based crypto systems:

- Elliptic Curve Cryto Based on elliptic curves (duh). Classically this is better than RSA since is secure with smaller parameters. However, a quantum computer can crack it. Has been around since 1985 but hard math made it hard to use.
- 2. Lattice-based Crypto Based on certain lattice problems being hard to solve. Has been around since 1995.
- 3. Learning-With Errors (LWE) Based on the difficulty of learning a function from just a few points. Has been around since 2000. We will cover this later.

Non-factoring based crypto systems:

- Elliptic Curve Cryto Based on elliptic curves (duh). Classically this is better than RSA since is secure with smaller parameters. However, a quantum computer can crack it. Has been around since 1985 but hard math made it hard to use.
- 2. Lattice-based Crypto Based on certain lattice problems being hard to solve. Has been around since 1995.
- 3. Learning-With Errors (LWE) Based on the difficulty of learning a function from just a few points. Has been around since 2000. We will cover this later.
- 4. McElice Public Key Based on error-correcting codes. Hardness assumption is that its hard to error-correct without the parity matrix. Has been around since 1978 but large keys made it a problem. We will cover this later.

Non-factoring based crypto systems:

- Elliptic Curve Cryto Based on elliptic curves (duh). Classically this is better than RSA since is secure with smaller parameters. However, a quantum computer can crack it. Has been around since 1985 but hard math made it hard to use.
- 2. Lattice-based Crypto Based on certain lattice problems being hard to solve. Has been around since 1995.
