

Problem 1, part a DFA:

Part b DFA:

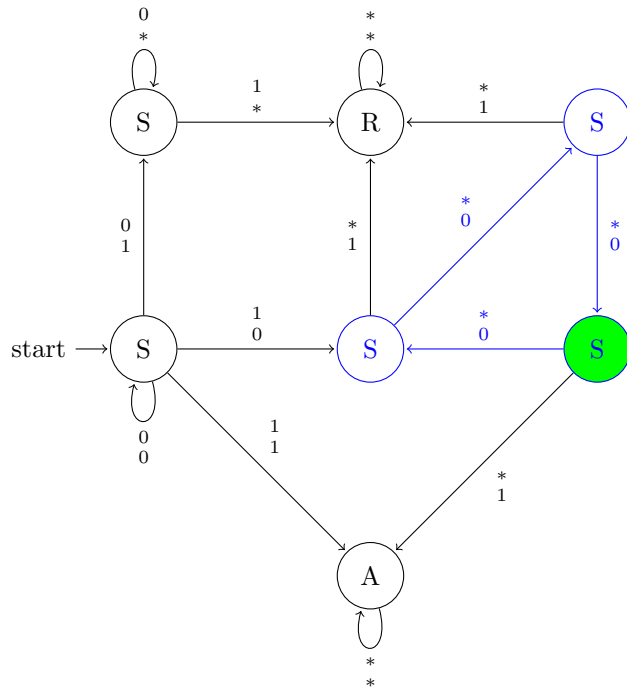

Problem 2 (WS1S nonempty intersection) DFA:

Regex: $((0, 0) \cup (0, 1) \cup (1, 0))^*$

Problem 3 (WS1S), part a DFA:

The solution for part b is similar to part a, except that the loop (blue) is bigger. The total number of nodes in the loop is n . Only the green state can transition to the accept state. DFA below:
