Can then look at each piece separately.

<ロト < 置 > < 置 > < 置 > < 置 > の < @</p>

 $(\exists y)[w < x < y]$ is TRUE iff w < x is TRUE. So can ELIM y.

 $(\exists y)[w < x < y]$ is TRUE iff w < x is TRUE. So can ELIM y. $(\exists y)[w < y < x]$ is TRUE iff w < x is TRUE. So can ELIM y.

 $(\exists y)[w < x < y]$ is TRUE iff w < x is TRUE. So can ELIM y. $(\exists y)[w < y < x]$ is TRUE iff w < x is TRUE. So can ELIM y. $(\exists w, x, y)[w < y = x]$ is TRUE iff w < x is TRUE. So ELIM y.

 $(\exists y)[w < x < y]$ is TRUE iff w < x is TRUE. So can ELIM y. $(\exists y)[w < y < x]$ is TRUE iff w < x is TRUE. So can ELIM y. $(\exists w, x, y)[w < y = x]$ is TRUE iff w < x is TRUE. So ELIM y. So

 $(\exists w)(\forall x)[(\exists y)[w < x < y] \lor (\exists y)[w < y < x] \lor (\exists y)[w < y = x]] \equiv$

 $(\exists y)[w < x < y]$ is TRUE iff w < x is TRUE. So can ELIM y. $(\exists y)[w < y < x]$ is TRUE iff w < x is TRUE. So can ELIM y. $(\exists w, x, y)[w < y = x]$ is TRUE iff w < x is TRUE. So ELIM y. So

 $(\exists w)(\forall x)[(\exists y)[w < x < y] \lor (\exists y)[w < y < x] \lor (\exists y)[w < y = x]] \equiv$

 $(\exists w)(\forall x)[(\exists y)[w < x] \lor (\exists y)[w < x] \lor (\exists y)[w < x]] \equiv$

 $(\exists y)[w < x < y]$ is TRUE iff w < x is TRUE. So can ELIM y. $(\exists y)[w < y < x]$ is TRUE iff w < x is TRUE. So can ELIM y. $(\exists w, x, y)[w < y = x]$ is TRUE iff w < x is TRUE. So ELIM y. So

$$(\exists w)(\forall x)[(\exists y)[w < x < y] \lor (\exists y)[w < y < x] \lor (\exists y)[w < y = x]] \equiv$$

$$(\exists w)(\forall x)[(\exists y)[w < x] \lor (\exists y)[w < x] \lor (\exists y)[w < x]] \equiv$$

 $(\exists w)(\forall x)[(w < x) \lor (w < x)) \lor (w < x))] \equiv (\exists w)(\forall x)[w < x]$

Key We elim a $\exists y$! That elim clauses is incidental.

 $(\exists w)(\forall x)[w < x]$

 $(\exists w)(\forall x)[w < x]$

We can ELIM a \exists quantifier. Yeah

 $(\exists w)(\forall x)[w < x]$

*ロ * * @ * * ミ * ミ * ・ ミ * の < や

We can ELIM a \exists quantifier. Yeah But we have a \forall quantifier. Boo

 $(\exists w)(\forall x)[w < x]$

We can ELIM a \exists quantifier. Yeah But we have a \forall quantifier. Boo But recall that $\forall \equiv \neg \exists \neg$. Yeah

 $(\exists w)(\forall x)[w < x]$

We can ELIM a \exists quantifier. Yeah But we have a \forall quantifier. Boo But recall that $\forall \equiv \neg \exists \neg$. Yeah

 $(\exists w) \neg (\exists x) \neg [w < x] \equiv$

 $(\exists w)(\forall x)[w < x]$

We can ELIM a \exists quantifier. Yeah But we have a \forall quantifier. Boo But recall that $\forall \equiv \neg \exists \neg$. Yeah

 $(\exists w) \neg (\exists x) \neg [w < x] \equiv$

 $(\exists w) \neg (\exists x) [x \le w]$

Look at the inner part:

 $(\exists w)(\forall x)[w < x]$

We can ELIM a \exists quantifier. Yeah But we have a \forall quantifier. Boo But recall that $\forall \equiv \neg \exists \neg$. Yeah

 $(\exists w) \neg (\exists x) \neg [w < x] \equiv$

 $(\exists w) \neg (\exists x) [x \le w]$

Look at the inner part:

$$(\exists x)[x \le w] \equiv \text{TRUE}$$

$(\exists w) \neg (\exists x) [x \le w]$

$$(\exists w) \neg (\exists x) [x \le w]$$

▲□▶ ▲□▶ ▲ 臣▶ ▲ 臣▶ ― 臣 … のへぐ

Look at the inner part:

$$(\exists w) \neg (\exists x) [x \le w]$$

Look at the inner part:

$$(\exists w) \neg (\exists x) [x \le w] \equiv (\exists w) [\neg \text{TRUE}] \equiv$$

 $(\exists w)$ [FALSE] \equiv FALSE

▲□▶ ▲□▶ ▲目▶ ▲目▶ 三日 - のへの

$$(\exists w) \neg (\exists x) [x \le w]$$

Look at the inner part:

$$(\exists w) \neg (\exists x) [x \le w] \equiv (\exists w) [\neg \text{TRUE}] \equiv$$

 $(\exists w)$ [FALSE] \equiv FALSE

So the original statement is FALSE.

Lemma \exists an algorithm that will, given a sentence of the form
