Week 06 (Wednesday)

There is a handout – please make the copies well in advance.

You might want to try this exercise out yourself, first, although it is not required. The "generic" syntax can be a little tricky, so I have provided you with my (kind of trivial) solution to the exercise. Please do not give students the hint of using a "sort" on a separate copy of the data the way I have done it – although this approach is not against the rules, I am hoping they will go through the steps of writing a more traditional iterator, etc.

Obviously, do not circulate my solution to the students.
